Frequently Asked Questions Document

Project title: From Genes to Phenotypes: Network-Based Insights into Extreme Habitat Adaptation

Project primary supervisor: Dr Tarang Mehta

Is there any flexibility with the study options?

Unfortunately, the university does not have a formal remote PhD-study policy and thus, we would expect the student to be based on campus for most of the PhD.

Whilst remote work is possible for the bioinformatics component of the project, and virtual meetings can/will be arranged, there will be periods of lab work, training, and meetings that would require either being on campus or at partner institutions.

If you believe this suits your personal circumstances, then I would encourage you to apply.
