

Privacy Policy for Security Net App

Last updated: April 6, 2026

We take your privacy seriously. Security Net is designed to operate without gathering any personal information.

1. We Do Not Collect Your Data Security Net does not gather, monitor, distribute, or sell any of your personal information. We do not build user profiles and no account registration is required.

2. Everything Stays on Your Device All information generated by the app — including preferences, feature settings, and security activity displayed within the app — is kept solely on your device. None of this information is sent to our servers.

3. No Server Storage or Logging Security Net does not rely on any server-side storage for your app data. We do not maintain server logs tied to your identity, as Security Net has no server-side system for recording user activity.

4. URL Scanner and Data Breach Search All scanning and search operations run entirely within the app itself. Any input you provide — such as a URL or email address — is used only to generate your results and is never transmitted to our servers.

5. No Analytics or Ads Security Net does not integrate any third-party analytics tools and displays no advertisements. We do not permit outside parties to monitor your behavior within the app.

6. Notifications When notifications are enabled, they are processed locally on your device. You may adjust notification permissions at any time through your device settings.

7. Deleting Your Data Since all data resides on your device, you have full control over it. You may remove it by uninstalling the app or using any available reset option within the app. Once deleted, this data cannot be restored.

8. Policy Updates Should our data practices ever change, we will revise this Privacy Policy accordingly and update the "Last updated" date at the top.
