## ~What is Human Technologies?~

Hayden Frankle, Nathalie Kung, Amelie Chan

---

Human Technologies is a subject exclusive to ICHK where you learn about different ways humans do things. That includes how we think, act, believe and create. In human technologies we also learn about the technologies we create to make our everyday tasks easier to do, it also teaches us better collaboration and gives you a better mindset.

---

### Our top 5 technologies are:

- **Speech**  
Because without speech we wouldn't be able to communicate with others and get important messages across.
  - **Fire**  
This is one of the most important technologies because it was the first ever technology and fire helps us keep warm and cook food which helps us stay alive.
  - **Shelter**  
Shelter is important because without shelter we would have no protection against nature, wild animals etc...
  - **Writing**  
We need writing to help us record things that we can't remember forever and to create records so that people in the future can know what happened this year.
  - **Hunting**  
We acquired hunting as it is a very important skill in survival. Without it, we would have far less food to eat and Humans may have not made it this far.
-
