IMPORTANT INSTRUCTIONS: You must write your name on the back page of the exam (And above). You may do so now. Do not open the exam.

This is an open book, open notes exam, but you cannot share books/notes. Please follow the university guidelines in reporting academic misconduct.

Note that there is an ASCII Table at the end of this exam. You will need it at some point. Do NOT detach the ASCII table.

Please wait until everyone has their exam to begin. We will let you know when to start.

Good luck!

1) GDB Lies (10, 1pt each)

Suppose we debug the following program (assignments omitted), and break at the `printf`:

```
void main(int argc, char* argv) {
  int i=...
  unsigned u=...
  float f=...
  double d=...
  printf("...",...)
}
```

List any outputs from gdb that *must* have been tampered with. (ie. if it might not have been tampered with, then don't list it) For example, the output of the first command has been tampered with, because the return value is not expected:

```
(gdb) print sizeof(double)
$0 = 37
```

```
(gdb) print sizeof(short)
$1 = 2

(gdb) print sizeof(0)
$2 = 4

(gdb) print (unsigned) -1 > 1
$3 = 0

(gdb) print 0 - 1
$4 = -1

(gdb) print 1U - 2
$5 = 4294967295

(gdb) p (int)(float)i == i
$6 = 1

(gdb) p (int)(double)i == i
$7 = 0

(gdb) p (unsigned)(int) u == u
$8 = 0

(gdb) p/f 0xC2040000
$9 = 33

(gdb) p/x (int)3.14159
$10 = 0x40490fd0
```

List GDB Outputs Tampered With: $0, _____ .

2) One of a kind! (10, 1 pt each)

A. For each instruction below, write *one* alternate instruction which performs the same operation. The alternate should not use the same instruction type (known as an opcode). It is acceptable if the flags do not match.

1. `leaq (%rbx, %rbp), %rbp` _____
2. `leaq (, %rdi, 2), %rdi` _____
3. `mov %rax, %rax` _____
4. `add $0, %eax` _____
5. `xor %rbx, %rbx` _____
6. `cltq` _____

B. Rewrite the following with *one* instruction:
(assume `x` is in `%rax`, `y` is in `%rbx`, array `a` (declared as `int a[256]`) is in address in `%rcx`, and that array b (declared as `char b[100][4]`) is at address 0x100.

7. `x = (x < 0) ? -1 : 0` _____
8. `x = x+2*y+17` _____
9. `a[x]++` _____
10. `x = b[x][y]` _____

3) Bitwise Number Classification (10 pts, 2 pts each)

Match the following datalab implementations to their descriptions.

```
int func1(int x) {
    return (x>>31) & 0x1;
}

int func2(int x) {
  return (!!x) & (!(x+x));
}

int func3(int x) {
  return !x;
}

int func4(int x) {
    int nx = ~x;
    int nxnz = !!nx;
    int nxovf = !(nx+nx);
    return nxnz & nxovf;
}

int func5(int x) {
  int minus_x = ~x+1;
  return ((minus_x|x) >> 31) & 1;
}
```

1. isTmin: Returns 1 if x == Tmin, 0 otherwise _____
2. isTmax: Returns 1 if x == Tmax, 0 otherwise _____
3. isNegative: Returns 1 if x < 0, 0 otherwise _____
4. isNonZero: Returns 1 if x!=0, 0 otherwise _____
5. isZero: Returns 1 if x == 0, and 0 otherwise _____

Q4) Array of hope (10 pts). Consider the following code on the left, and answer the questions on the right:

```
typedef struct {
  char g ;
  short n[10];
  int o;
  double w;
  float r;
} struct_elem;

typedef union {
  char g;
  short n[10];
  int o;
  double w;
  float r;
} union_elem;

struct_elem struct_array[10];
union_elem union_array[10];

____ get_val(int x, int y) {
  ...
}

int main(int argc, char** argv) {
  int a[16][16];
  printf("%ld\n", sizeof(struct_elem));
  printf("%ld\n", sizeof(union_array));
  union_array[0].o=0x42040000;
  printf("%f\n", union_array[0].r);
}
```

1. What is printed? **(2 pts each, 6 pts total)**

2. Notice that `get_val` is missing a definition. The following is the disassembly from gdb:

```
Dump of assembler code for function get_val:
   0x00000066a <+0>:     movslq %esi,%rsi
   0x00000066d <+3>:     movslq %edi,%rdi
   0x000000670 <+6>:     lea    (%rdi,%rdi,2),%rax
   0x000000674 <+10>:    lea    (%rsi,%rax,8),%rdx
   0x000000678 <+14>:    lea    0x2009c1(%rip),%rax
   0x00000067f <+21>:    movzwl 0x2(%rax,%rdx,2),%eax
   0x000000684 <+26>:    retq
```

What is the definition of get_val? **(3pts)**
(Hint: `0x2009c1(%rip)` is the address of either `struct_array` or `union_array`)

```
____ get_val(int x, int y) {

}
```

3. Which of the following orders minimizes the size of the struct? **(1pts)**
   a. g r o w n
   b. n w o r g
   c. w r o n g

5) Mutually assured instruction. (10 pts)

a) First, deduce the following functions. **(4pts)**

```

 69b:  c3                  retq
```

```
int func1(unsigned int n)
{
    if ( _______ )
        _____________;
    else
        _____________;
}

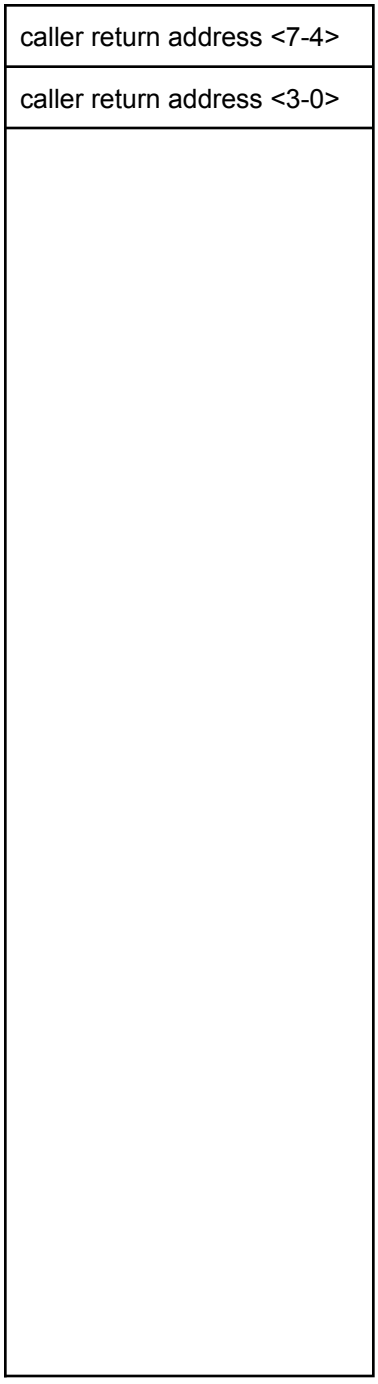
int func2(unsigned int n)
{
    if ( _______ )
        _____________;
    else
        _____________;
}
```

b) Suppose we call `func1(4)`, what is the return value? **(1pt)**

[problem continued on the next page]

c) Consider the case where `func1(2)` is called: Draw the stack at the point in the program execution when the stack is largest. To get full credit, you must show where the stack pointer is pointing, and indicate the names/locations of any unknown registers pushed to stack, any known values pushed to the stack, and any unused stack space. **(5pts)**

Assume each line of the table represents 4 bytes.



Q6) Hex marks the spot (10 pts): As you finally navigate your way to the last problem of the exam, still reeling from the maze of increasingly difficult challenges you have solved to get here, you look down to see what you feared the most: your bomb is still active! Either find your way and deactivate the bomb, or risk exploding the entire class. **Solve the final bomblab phase:**
