

Sample-The following is an incomplete essay:

Don't Support Nuclear Energy!

Even though it can provide the world with a source of electricity, nuclear power is not a good energy source because it is too expensive, the materials used in the power plants are not safe, and there is a great possibility of accidents.

First of all, nuclear fuel is expensive. It must be taken out of the ground and transported great distances. As fuels are used up, they will become even more expensive, just as oil and gas have become more expensive. In addition, nuclear power plants are expensive to build and to operate. It is expensive to train workers.

Nuclear materials are not safe. When uranium is taken out of the ground, radioactive gas is released. This is not safe for miners. Uranium itself is also not safe. Being around uranium is not safe for workers.

Nuclear waste is also dangerous. It is very radioactive, and it is difficult to dispose of it or even to store it safely.
