Draw 2 Squirals

Make a new variable called **`length`** and use it in a move block. Inside of a **`repeat`** block, change or set the value of length to draw a "squiral" (Square+Spiral) similar to the one below. Make each line segment a different color. Then ***make a 2nd "spiral" using a different base shape (e.g. triangle, pentagon,...)***. Hint: These are really similar to drawing a polygon. You can also play around with making the pen thicker to give your squiral more pop.
