Agenda

4:10 - 4:25 Lisa Rennels Presentation

4:25 - 4:35: Discussion Lisa's research

4:35 - 4:50: Mindy Price Presentation

4:50 - end: Discussion Mindy's research

Discussion Questions

Enter your question for the speakers below

Lisa Rennels

- (Ned) Great talk! For someone who is very much not an expert, can you talk a little bit more about what parameters there are in IAMs? Which are most uncertain right now?
- (Sol) Slide 22: which pairs are interacting the most meaning minimizing a little of both could have the same effect on minimizing uncertainty as minimizing one?
- (Alex) How does the uncertainty from the damage function compare with those of other parameters (e.g., TCR)?

Mindy Price

- (Evan) You mention how governmentality is being used to push agriculture agendas in the polar north, but are more overt exclusions / land grabs occurring or being considered?
- (Darby) What does the agricultural labor landscape look like right now? I know you mentioned still having some data collection to do, I'm more curious how we identify which populations are most at risk for exploitation.
