PRIVACY AND SECURITY POLICY

We realize that the privacy of your personal information is important. This policy describes what information may be collected when you use our mobile application, how that information is used, and how that information is maintained.

We never sell, distribute, or disclose personally identifiable information to third parties other than law enforcement.

In most cases, the general information we collect is anonymized and used for statistical or analytical purposes only. This information cannot be linked to you as an individual unless otherwise stated.

When you use our application, you agree to the practices described in this policy.

Rude, impolite language is not permitted. The application has a user blocking system and posts are reviewed by an Administrator.

What are applications?

Applications are information files containing unlimited text content that are stored on users' computers to improve website performance. These files allow the user to be recognized and the website to be tailored to their preferences. Applications usually contain the name of the website they belong to, the time they are stored on the user's computer, and a unique number.

What are applications for?

Applications are used to personalize the content of the website or mobile application according to the preferences of the individual user and to optimize work with the specified website. They are also used to collect anonymous general statistics that help us understand how the user works with websites, helping to improve their structure and content without having access to the user's personal information.

Do applications contain personal information?

Personal information collected through applications can only be used to perform certain user operations. Such information is encrypted in a way that is accessible to unauthorized persons.

Deleting applications

As a rule, applications used for web browsing and mobile applications allow you to save applications by default. This setting can be changed so that automatic saving of applications is blocked in the web browser or the user is informed each time before cookies are stored on the

computer. Detailed information about the different ways of working with the apps can be found in the settings of the web browser app.

Restricting the app may affect some features of the website and mobile app.
