JD For Cloud Architect

Job Title: Cloud Architect
Company: [Company Name]
Location: [City, State]

Job Description:

The Cloud Architect will be responsible for designing, implementing, and maintaining the company's cloud infrastructure and systems. This includes assessing and recommending cloud technologies and platforms, designing and implementing cloud-based solutions, and ensuring the security, performance, and scalability of the company's cloud systems. The Cloud Architect will work closely with other teams to understand the requirements and design, develop, test and deploy cloud-based solutions.

Key Responsibilities:

- Assess and recommend cloud technologies and platforms
- Design and implement cloud-based solutions
- Ensure the security, performance, and scalability of the company's cloud systems
- Collaborate with other teams to understand the requirements and design, develop, test and deploy cloud-based solutions
- Stay up-to-date with the latest developments in cloud technology and security
- Continuously improve and iterate on existing cloud systems
- Provide technical guidance to other team members

Competency Requirements:

- Strong understanding of cloud computing principles and architecture
- Strong experience with cloud platforms and technologies (e.g. AWS, Azure, GCP)
- Strong experience with cloud-based infrastructure and services (e.g. VMs, storage, databases)
- Strong experience with cloud security and compliance
- Strong problem-solving and analytical skills
- Strong written and verbal communication skills
- Strong attention to detail
- Ability to work in a collaborative environment

Qualifications:

- Bachelor's or Master's degree in Computer Science, Information Technology or a related field
- Strong experience in cloud computing and architecture
- Strong understanding of cloud-based infrastructure and services
- Strong understanding of cloud security and compliance
