

Share your technology idea...how technology affects it?

Piper Snowden: spreading news quickly

Narisa Sirisompong: Communication Between People / Security of Private Information (ex: Bank Account Information)

2 Anh Vo: GPS- Helping us to access any location we want. If we get lost, we can track back to where we were before. We no longer have to use maps.

2 Joseph Bruechner: to prevent bots from stealing exclusive sneaker drops or very limited items on websites, for example improving CAPTCHA. In turn this allows for more authentic/human buyers.

2 Arnov: Surgeons use technology to do surgeries which saves many people.

Cameron Stanford: Dash Cams and cameras in cars, now able to prove one's fault or innocence in a crash and would just be a battle of legal teams without it.

Merrick Laird: Phones allow for people to get necessary news and weather updates.

Emily Kim: car

8 Jacklyn Pham

Translating: A rise in real-time translation apps that makes social interaction unnecessary. Could be more accurate text-to-speech ai companions. Youtube videos also make it easier for people to learn different languages or apps like Duolingo, could be more engaging(???????) aahhh okay← translation

Tyler Moyer

Workforce is greatly decreased. One man can handle acres upon acres of fields thanks to tractors. A lot of big companies have almost fully automated factories. (factories that require very few actual workers that get paid much higher than the average factory worker in order to manage the machines). Companies like these can move to the U.S. from foreign countries because we have a good CSP (even if they don't pay \$5 a day for a worker, it would be cheaper to pay higher for few workers). <— Economy class to thank for half of the explanation (my explanation stops at automated factories).

~~Advertising is big big thanks to technology.~~

Zion: Ovens and microwaves are good at helping people make food faster which is better than using fire like the old days. Also new stuff come in like air fryers, refrigerators to keep food cold. Also washers and dryers to clean clothes instead of washing clothes with your feet like the old days

Duy Vu:

We can't contact people from far right away, when we need a phone call to make it happen. In an emergency situation like a car crash, people get injuries.

1 Henry Endt: Creating stronger power sources, ways to create energy more efficiently and cause less to none environmental damage. With new sources of power we could make stronger cars, weapons and technology.

Sarah Cameron: Eye tracker technology (Eyegaze), allows for disabled users to utilize the internet/communicate (use eye tracking to replace need for mouse and keyboard for people who can't utilize them). Without advancements in tracking software and advanced hardware to track eyes via cameras. Makes communication and the world-wide-web more accessible to more people who used to not be able to use it.

Anden-Prosthetics, better control nerve connections maybe?

Dylan R: Warfare. War is cruel, the crueler it is, the quicker it ends.
