

Advanced portfolio risk assessment form

Identify the hazards

The main hazard that is presented to us during filming will be the shots of the motorcyclist e.g the character driving around on streets.

Decide who might be harmed and how

Us (filming) :We may get injured by other road users whilst filming

The actors: The actor could be involved in an accident or fall off.

Members of the public: Members of the public should not be at risk of being harmed in shooting the video

Evaluate the risks and decide on precautions

The risks involve road accidents and the best way to avoid a road accident is to only film where and when it is safe to do so (e.g on pavements on an empty road) and to make sure the driver is proceeding with caution whilst driving for the shots.

Record your findings of this form and implement them

The findings from this form show that as long as all members of the team are safe the filming can go on without any problems. This will be implemented by using as many team members as possible to reduce the risk and making them aware of the hazards that need to be avoided.
