Mini

Tam Galahena is an AI educator, strategist, and builder who turns potential into practical advantage. As Founder of Enble he helps organisations lift people, streamline processes, and open new products and services. He believes AI will drive new ways of working and invention, and that success comes from embracing it. Most teams lack the bandwidth to integrate AI across people, processes, and systems. As the founder of Enble, that's where he steps in.

Short

Tam Galahena is an AI educator, strategist, and builder who translates AI into real results. As Founder of Enble he partners with SMEs, associations, councils, and not for profits to raise capability across People, Process, and Product and Service. His sessions are fast and demo rich, designed for non-technical teams in plain English. Tam believes AI will power the next decade of business innovation and that leaders must embrace it. Because most organisations cannot integrate AI end to end on their own, Enble provides training, transformation, and engineering to close the gap between intent and impact.

Full

Tam Galahena is an AI educator, strategist, and builder who helps growth-minded organisations work smarter, ship faster, and create new value with AI. He leads Enble, a full-stack AI partner for SMEs that acts across three levers. People, by giving every team a capable AI coworker and the habits to use it well. Process, by mapping work, removing friction, and keeping deterministic steps deterministic so hours are saved where it matters. Product and Service, by prototyping offers, testing markets, and turning insight into revenue. Tam's sessions are demo rich and copy-along friendly, with clear guardrails and a plan to build capability. He believes AI will open new ways of doing business and invention in the decade ahead, and that success requires embracing it. Since most organisations lack the in-house bandwidth to integrate AI across systems, processes, and people, Enble provides the training, transformation, and engineering that make it real. An engineer turned educator, Tam co-founded TriumphEd, raised AU $300k, and built AI-powered software to address a $15B challenge in higher education before launching Enble to close the realisation gap between headlines and impact.
