Akvelon Inc.

Position: Senior Full Stack SDE

About us

Akvelon Inc (USA) works in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in the United States and other countries (**Microsoft, Facebook, Airbnb, Dropbox, Pinterest,** and many others). This is a great opportunity to transfer experience and experience with leading engineers of world-renowned companies.

About project

American social news aggregation, content rating, and discussion website. Also called "The front page of the internet," it brings over 430 up million people together each month through their common interests, inviting them to share, vote, comment, and create across thousands of communities. Come for the cats, stay for the empathy.

The International division helps us achieve our mission of bringing community and belonging to everyone in the world through work on multiple teams. We connect users to each other through engaging, real-time chat experiences. We help users encounter the best content at the right time via the right product surface. And we are laying architectural foundations and building experiences to help communities thrive internationally. These efforts set us up for continued growth, and as a backend engineer you contribute to the delight of millions of new and existing users.

As a Backend Engineer, you'll build and scale the exciting features and services needed to create real-time experiences and spark connections, which will fuel the next wave of the website's Growth. With our small team, your work will directly impact hundreds of millions of users around the world. Join us and help build the future of popular social network!

Responsibilities

- Design, build and ship backend services for millions of users to support our international expansion.
- Move fast while balancing quality. We can't afford extensive processes, and we also can't afford show-stopping bugs. We need people who can balance speed with quality while quickly building brand-new products.
- Shipping new products and experiments that will increase the client's ability to understand and expand our international user base.
- Contribute meaningfully to team strategy. We give everyone a seat at the table and encourage active participation in planning for the future. Don't just come along for the ride.
- Communicate effectively, within the team and across disciplines. Work closely with product managers and designers to craft compelling user experiences.
- Foster a healthy engineering culture and mentor and coach other engineers.

Requirements

- 5-8 years of software development experience in one or more front end focussed programming languages; Javascript, Typescript, ES6d
- Professional experience with Python or Go.
- Experience with one or more front-end web frameworks such as LIT, Polymer, React, Vue, or Angular with experience with CSS.
- Experienced with GraphQL, REST, HTTP, Thrift basics, and the ability to design and implement maintainable APIs is a plus.
- Comfort working in a highly agile, intensely iterative software development process.
- Strong organizational skills and the ability to prioritize tasks and deliver projects on schedule.
- Experience with A/B testing, hypothesis building and best practices.
- Entrepreneurial spirit. You are self-directed, innovative, and biased towards action in fast-paced environments. You love to build new things and thrive in ambiguity and even failure.
- Excellent communication skills. You partner effectively with teams in a fully remote environment and discuss complex topics with technical and non-technical audiences.

We offer

- Entering a professional level equivalent to world standards;
- High wages (we proceed from the wishes of the candidate and the level);
- LCA with dentistry;
- An excellent team of high-level professionals who have something to learn;
- Flexible working hours.

Please send your resume / questions to our mail (career@akvelon.com).
We will be glad to see you in our team!
