

Hi SF LIVING WAGE COALITION,

I wanted to share a WordPress security tool that I believe could provide valuable protection for your website: Wordfence.

Wordfence is a comprehensive WordPress security plugin designed to help protect websites from hacking attempts, malware, unauthorized access, and other common cyber threats. It combines a Web Application Firewall (WAF), malware scanner, login security tools, and security monitoring into one solution.

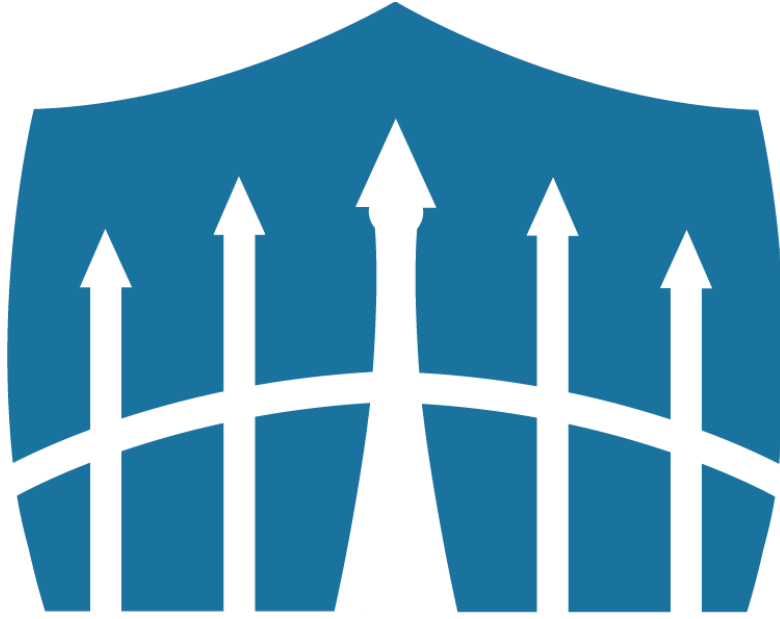

Here are some practical examples of how Wordfence could help protect the site:

- **Blocking suspicious login attempts:** For example, if someone repeatedly tries different passwords against a WordPress administrator account, Wordfence can help detect and block those brute-force attempts.
- **Protecting against malicious web requests:** If an attacker sends a request designed to exploit a vulnerability in WordPress or a plugin, the Web Application Firewall can help identify and block potentially malicious traffic.
- **Detecting malware:** If a WordPress file becomes infected or is modified with suspicious code, Wordfence's scanner can help identify the issue so it can be investigated.
- **Monitoring suspicious activity:** Wordfence can provide visibility into things such as failed login attempts, IP addresses making requests, and other activity that may deserve attention.
- **Protecting administrator accounts:** Login security features can help strengthen access to important WordPress accounts and reduce the risk of unauthorized access.
- **Identifying compromised files:** For example, if a legitimate WordPress file has been unexpectedly changed, the scanner can help flag the modification for review.

Another major benefit is that Wordfence has a free version, which means the site can gain an additional layer of security without requiring an additional software purchase. It can also be a useful starting point for improving the site's overall security posture.

I believe this could be a practical and cost-effective security improvement for the WordPress site. If you're interested, I'd be happy to join a meeting and give you a quick overview or demonstration of how Wordfence works and how it could potentially benefit the organization.

Thank you for your time and consideration!
