The screenshot shows a C++ IDE with the file `main14.cpp` open. The code reads a file `tio2.txt` and counts the occurrences of words. A separate window shows the content of `tio2.txt`:

```
saya memiliki 2 mangga  
saya memiliki 3 melon  
saya memiliki 2 pisang  
saya memiliki 3 jeruk  
saya memiliki 12 telur  
saya memiliki 12 telur
```

The screenshot shows the same C++ IDE with the execution output of the program displayed in a console window:

```
Daftar kata dan angka ganda, dan berapa kali muncul:  
Kata/Angka Ganda: 12 muncul sebanyak 2 kali.  
Kata/Angka Ganda: 3 muncul sebanyak 2 kali.  
Kata/Angka Ganda: memiliki muncul sebanyak 6 kali.  
Kata/Angka Ganda: saya muncul sebanyak 6 kali.  
Kata/Angka Ganda: telur muncul sebanyak 2 kali.  
.....  
Process exited after 0.0779 seconds with return value 0  
Press any key to continue . . .
```

This code is obviously for detect double number in txt file
