There are a few things that make me pause before taking part in this medical procedure. These products have been authorized under Emergency Use Authorization and have NOT been FDA approved. They don't prevent you from catching the virus nor being an asymptomatic spreader. They're still undergoing clinical trials and are not estimated to be completed until 2023. This is a new technology being administered without any long-term safety data and the manufacturers are EXEMPT from any liability. I urge you to keep this in mind when mandating something that can easily be considered reckless endangerment. VAERS has reported several thousand cases of severe adverse effects and deaths. I have been injured by vaccines and understand that there are risks involved. Where there are risks, there must be a choice! "My body... my choice" stands truer today than any other time and doesn't only apply when considering an abortion. I urge you to allow teachers to make this critical decision with their physician. Medicine is not one sized fit all. What might be ok for one person can certainly be deadly for the next. Please don't allow medical freedom to pass. It's a slippery slope to tyranny. If we're not able to make choices about our OWN bodies, we are nothing more than slaves. As a black woman, I am appalled by what I see happening today. Are we still slaves? Or are we free?
