INTRODUCTION

Background refers to the contextualization of the problems that will be raised in the research. This section should cover things from general to specific. This section must also contain the main theory and supporting theories that will be used in writing scientific articles.

Apart from the things that have been explained previously, another thing that needs to be stated in the background is the problem to be researched.

The first paragraph in the background section must explain the purpose of the research to be carried out.

METHOD

In preparing this research, this section must explain the research methods used in writing scientific articles. Some examples of research methods that can be used include: Case Study, Descriptive, Literature Study and others

In this section, the author or researcher must be able to explain the research stages based on sub-chapters which will be explained further in the discussion section

DISCUSSION

This section includes a discussion on writing scientific articles. This section must cover several things, namely the results of research conducted using the main theory, the discussion must be sharp and able to answer the research questions that have been mentioned in the background. This section can also include several sub-sections according to what is researched in the article that will be written.

The discussion must be strengthened by theory and provide a clear analysis process so that research findings and analysis can be explained.

CONCLUSION

The conclusion refers to a brief explanation of the results of the research that has been carried out, and also in the conclusion section it must explain the essence of the discussion that has been prepared in the scientific article

BIBLIOGRAPHY

The bibliography is a source of what is used as reinforcement in scientific articles. The bibliography uses the American Psychological Association (APA) Style bibliography writing technique (It is recommended to use Mendeley or Zotero software)
