

## Handling Multiple Buttons

```
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    if (isset($_POST['login'])) {
        echo "Login button clicked! Processing login...";
        // Add login logic here
    } elseif (isset($_POST['register'])) {
        echo "Register button clicked! Processing registration...";
        // Add registration logic here
    }
}
?>

<!DOCTYPE html>

<html>

<body>

<form method="post">

    <label>Username: <input type="text" name="username" required></label><br>
    <label>Password: <input type="password" name="password" required></label><br>
    <button type="submit" name="login">Login</button>
    <button type="submit" name="register">Register</button>

</form>

</body>

</html>
```

## Handling Multiple Forms:

```
<?php
if ($_SERVER["REQUEST_METHOD"] == "POST") {
    if (isset($_POST['form_type'])) {
        if ($_POST['form_type'] == 'login') {
            a1();
        } elseif ($_POST['form_type'] == 'contact') {
            a2();
        }
    }
}

function a1() {
    $username = $_POST['username'];
    $password = $_POST['password'];
    echo "<p>Login Attempt: Username - $username, Password - $password</p>";
}

function a2() {
    $name = $_POST['name'];
    $email = $_POST['email'];
    $message = $_POST['message'];
    echo "<p>Contact Form Submitted: Name - $name, Email - $email, Message - $message</p>";
}
```

```
}
```

```
?>
```

```
<!DOCTYPE html>
```

```
<html >
```

```
<body>
```

```
<h2>Login Form</h2>
```

```
<form method="post">
```

```
  <input type="hidden" name="form_type" value="login">
```

```
  <label>Username: <input type="text" name="username" required></label><br>
```

```
  <label>Password: <input type="password" name="password" required></label><br>
```

```
  <button type="submit">Login</button>
```

```
</form>
```

```
<h2>Contact Form</h2>
```

```
<form method="post">
```

```
  <input type="hidden" name="form_type" value="contact">
```

```
  <label>Name: <input type="text" name="name" required></label><br>
```

```
  <label>Email: <input type="email" name="email" required></label><br>
```

```
  <label>Message: <textarea name="message" required></textarea></label><br>
```

```
  <button type="submit">Submit</button>
```

```
</form>
```

```
</body>
```

```
</html>
```

## PHP (Run on XAMPP server)

### Two files

- 1> **insert.html**
- 2> **index.php**

### Steps:->

- 1> Start ->programs->XAMPP->xampp control panel (check APACHE and MySQL has green tick and stop is at button) minimize this window
- 2> Open firefox->write in address bar->localhost/phpmyadmin -> create database and table here,also add at least 3 rows in it. (This is MYSQL)  
*Database name- db*  
*Table name- stud*  
*Table have 2 columns name,address with data type varchar*
- 3> Goto My computer -> c:\ ->Xampp folder->htdocs folder-> in this folder create an folder named as php1(any name you can give) in this folder save two files ->insert.html and index.php (write code in these files using notepad)

### To Run

- 1> Open firefox -> in address bar type->localhost\php1\insert.html  
(php1-> is name of folder you had given)

### insert.html

```
<html>
<body>
<form action="index.php" method="post">
Name: <input type="text" name="name"><br>
E-mail: <input type="text" name="address"><br>
<input type="submit">
</form>
```

```
</body>
</html>
```

## index.php

```
<?php
$conn=mysqli_connect('localhost','root','','db'); //db is name of database created in mysql
phpmyadmin
if(!$conn)
{
die(mysqli_connect_error());
}
echo "connect successfully";
echo "<br>";
$name= $_POST["name"];
$tadd=$_POST["address"];
$sql1="insert into stud values ('$tname','$tadd)";
mysqli_query($conn,$sql1);

$sql= ' select * from stud ' ;
$rs=mysqli_query($conn,$sql);
$rows = mysqli_num_rows($rs);
if( $rows > 0)
{
while($row=mysqli_fetch_assoc($rs))
{
echo "Name: {$row['name']}<br>";
echo "Address: {$row['address']}<br>";
echo "-----<br>";
}
}
else
echo "Record not found";
```

```
mysqli_close($conn); ?>
```
