Caches:

-

Hosted CEs

- Continuing gitops migrations
 - 2 CEs left for migrations. One we plan on tearing down, the other is unresponsive site

GWMS Factory

- Notified HTCSS team of openssl incompatibility between al9 factory and subset of HTCondor CEs
 - Was discovered because CMS still sends both scitoken (for auth) and x509 proxy (not sure if actually still used for anything on WN)
 - Determined this happens to CEs still running HTCondor 9.0
 - Waiting on fix before declaring success for k8s factories and decommissioning UCSD bare metal factory
