ABSTRACT (9 PT)

This abstract should be written in English and consist of **150–250 words**. It must clearly describe the **background of the community problem**, the **objectives of the community service program**, the **methods of implementation**, the **main results or outcomes**, and the **conclusions or implications** of the activity.

The background should briefly explain the existing conditions and key challenges faced by the community partners that motivated the implementation of the program. The objectives should explicitly state the aims of the community service activities. The methods section should summarize the type of activities conducted, such as training, mentoring, empowerment programs, or community-based interventions, including the target participants and implementation stages.

The results should highlight the main achievements of the program, including improvements in knowledge, skills, attitudes, or community capacity, supported by observable outcomes. The conclusion should emphasize the overall impact of the program and its potential for sustainability or replication in similar community settings. Citations and references should not be included in the abstract.

Introduction

This section should provide a clear and concise overview of the **background and context of the community service activity**. It should begin by describing the general conditions of the target community, supported by relevant data, reports, or previous studies that highlight existing social, economic, health, educational, or environmental challenges. The introduction should emphasize the **practical problems faced by the community partners**, rather than theoretical or purely academic issues.

Furthermore, this section should explain the urgency and relevance of the community service program by linking the identified problems to broader community development goals, national or local policies, or sustainable development priorities. Authors are encouraged to demonstrate how the proposed activity addresses real community needs and contributes to improving community capacity, welfare, or resilience.

The introduction should also briefly review **relevant concepts or previous community-based initiatives** to position the program within existing practices, while clearly identifying gaps that justify the implementation of the current activity. Finally, this section must clearly state the **objectives of the community service program**, including the expected benefits for the community partners. Hypotheses, statistical variables, and experimental testing are not required in this section.

Community Partner Problems

This section should describe in detail the **profile of the community partners** involved in the community service program, including their socio-demographic characteristics, institutional background (if applicable), and the context in which they operate. The description should be based on **direct observations, preliminary assessments, or initial discussions** with the partners to ensure that the identified problems reflect real community conditions.

The main problems faced by the community partners should be clearly identified and prioritized. These problems may relate to limited knowledge, skills, resources, access to services, organizational capacity, or other structural and contextual constraints. Authors should explain how these problems affect the community's daily activities, productivity, well-being, or ability to develop sustainably.

In addition, this section should clarify the **needs and expectations of the community partners** and describe the gap between existing conditions and the desired situation. The problems presented must be those that **can be addressed through community service interventions**, such as training, mentoring, empowerment programs, or participatory approaches. The section should conclude by explaining the **mutual agreement between the service team and the community partners** regarding the priority issues to be addressed through the proposed community service program.

Methods of Implementation

This section should explain the **design and implementation process of the community service program** in a clear and systematic manner. It should begin by describing the **approach used**, such as participatory, empowerment-based, community-based, or collaborative approaches, and explain why this approach is appropriate for addressing the identified community partner problems.

The methods should be presented in **sequential stages**, covering the preparation, implementation, and evaluation phases. The preparation stage may include needs assessment, coordination with community partners, development of materials or modules, and logistical planning. The implementation stage should describe the types of activities conducted, such as training sessions, workshops, mentoring, demonstrations, or field practices, including the target participants, duration, and frequency of the activities.

This section should also describe the **tools, media, or instruments** used during the activities, such as training modules, educational materials, digital media, or evaluation instruments. In addition, authors should explain the **indicators of success** and the methods used to monitor and evaluate the activities, including pre- and post-activity assessments, participant feedback, or direct observations.

Finally, the methods section should emphasize the **active involvement of community partners** throughout the program and explain how their participation contributes to the effectiveness and sustainability of the community service activities.

Results and Discussions

This section presents and discusses the **outcomes of the community service activities** in relation to the objectives of the program and the problems faced by the community partners. The results should be described systematically, beginning with the **implementation process**, followed by the main achievements of the activities. Authors are encouraged to present the results in a clear and informative

manner, supported by tables, figures, or photographs when necessary to illustrate the activities and outcomes.

The results should focus on **observable changes and measurable improvements** among the community partners, such as increased knowledge, enhanced skills, improved attitudes, strengthened organizational capacity, or better access to resources. Where applicable, the results may be supported by simple quantitative data (e.g., pre- and post-activity assessments) or qualitative evidence (e.g., participant feedback, observations, or testimonials).

Work with Graphic:

Figures and tables are the most effective way to present results. Captions should be able to stand alone, such that the figures and tables are understandable without the need to read the entire manuscript. Besides that, the data represented should be easy to interpret.

Tips:

1. The graphic should be simple, but informative.
2. The use of color is encouraged.
3. The graphic should uphold the standards of a scholarly, professional publication.
4. The graphic must be entirely original, unpublished artwork created by one of the co-authors.
5. The graphic should not include a photograph, drawing, or caricature of any person, living or deceased.
6. Do not include postage stamps or currency from any country, or trademarked items (company logos, images, and products), and.
7. Avoid choosing a graphic that already appears within the text of the manuscript.

Look this example below:

Table #... <Title of Table>

Category	Score Interval	f	%
Xxxxxxx	≥ 18	2	1.56
Xxxxxx	14-17	26	20.28
Xxxxx	11-14	34	26.52
xxxx	7-10	9	7.02
Xxx	≤ 6	7	5.46
Total		78	100

Table without vertical lines

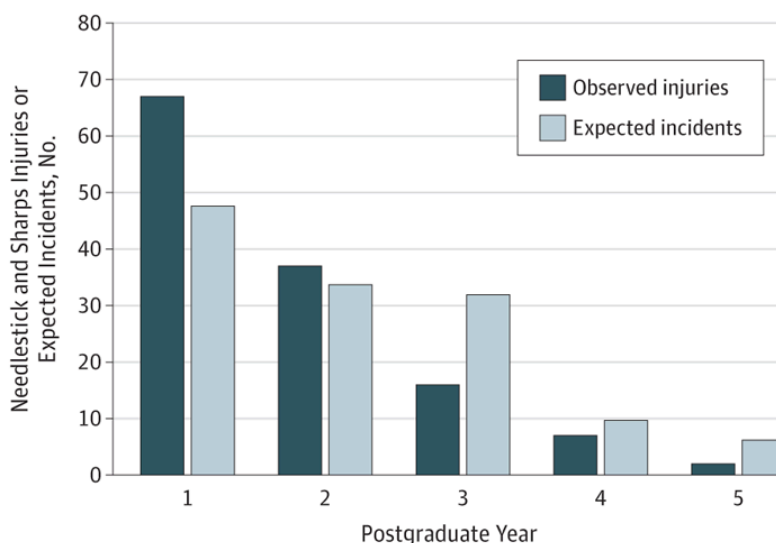

Figure # ... <Title of Figure>

(resource: <https://jamanetwork.com/>)

The discussion should interpret the results by linking them to relevant concepts, previous community-based programs, or best practices in community development. Authors should explain how and why the implemented activities contributed to the observed outcomes, as well as identify factors that supported or constrained the implementation process. This section may also highlight lessons learned and practical insights gained from the community service program.

Finally, this section should emphasize the value of the program for the community partners, demonstrating how the activities addressed the identified problems and contributed to improving community capacity and well-being. The discussion should remain practice-oriented and avoid excessive theoretical elaboration or statistical analysis.

Impact and Sustainability

This section describes the short-term and long-term impacts of the community service program on the community partners and the broader community. The impact should be explained in relation to the objectives of the program and the initial problems identified, highlighting tangible changes such as improvements in knowledge, skills, attitudes, practices, or community capacity. Where possible, the impact may be supported by evidence from evaluations, observations, or feedback from the community partners.

In addition to immediate outcomes, this section should emphasize **the sustainability of the program**. Authors should explain how the results of the community service activities can be maintained and developed after the program has been completed. This may include the continued use of training materials or tools, the establishment of local facilitators or cadres, integration of the program into existing community or institutional activities, or ongoing collaboration between the service team and community partners.

Furthermore, the potential for replication or scaling up of the program in other communities or contexts should be discussed. Authors are encouraged to describe the key factors that enable the program to be adapted to similar settings. This section should demonstrate that the community service program not only provides temporary solutions but also contributes to sustainable community development and long-term community empowerment.

Conclusions

This section summarizes the **key outcomes of the community service program** and highlights its overall contribution to addressing the problems faced by the community partners. The conclusion should briefly restate the objectives of the program and explain how the implemented activities successfully achieved these objectives.

The conclusion should emphasize the **main benefits for the community partners**, such as improved knowledge, skills, capacity, or practices, as well as the broader impact on community development. Authors may also briefly mention the sustainability potential of the program, including opportunities for continued implementation or replication in similar community settings.

This section should be concise and focused, avoiding the introduction of new data, extensive discussion, or references. Recommendations, if included, should be practical and directly related to the continuation or enhancement of the community service activities.

Acknowledgments

The authors would like to express their sincere gratitude to the **community partners** for their active participation and cooperation throughout the implementation of the community service program. Special appreciation is also extended to the **institutions, organizations, or local authorities** that provided support and facilitated the successful execution of the activities.

If applicable, the authors acknowledge the **funding institutions or grant providers** that supported this community service program. The authors also thank all individuals and team members who contributed to the planning, implementation, and evaluation of the program.

References

This journal applies the **Vancouver referencing style**. All references must be numbered consecutively in the order in which they first appear in the text and indicated using Arabic numerals in square brackets. The reference list should be arranged numerically according to the order of citation. Authors are required to ensure that all references are accurate, complete, and formatted consistently in accordance with the Vancouver style guidelines.

Tips: *(Please cross check for)*

1. Spelling of author names.
2. Punctuation.
3. Number of authors to include before using “etc.”, and.
4. Reference style

We suggest all of you using software ENDNOTE, MENDELEY, ZOTERO, or EASYBIB for easily citation. References should be the most recent and pertinent literature available (about 5-10 years ago).
