EDUCATION

Qatar University, Doha, Qatar
College of Medicine

International Modern Arabic School, Putrajaya, Malaysia
A-Levels, 4A*s in Mathematics, Physics, Biology and Chemistry

Al-Qabas International Schools, Khartoum, Sudan
IGCSEs, 8A*s, with 100 on Mathematics and 95+ in every single other subject

CREDITATION:

I have 6+ years of experience with Anki, and before it, I used to be an average B student, with the occasional C. Furthermore, I struggled with attention and motivation issues due to ADHD, which at the time I wasn't medicated for. After discovering Anki, I haven't had a grade lower than 90, and I've been consistently achieving A*s ever since, culminating in me getting a full-ride stipend-included scholarship to study medicine in a sub-200 QS ranking university. I have maintained a 4.0 GPA ever since, when many of my classmates have failed classes, or even repeated years.

The background story is that when I was going into Year 11, I changed schools and curricula to CIE. When I did the entrance exam, I got a 23% on a very easy Chemistry entrance exam. I didn't want to go into Year 11 with that abysmal performance (although the school didn't care), so I decided to repeat Year 10. I knew I had to change my study strategy, so I started researching, and the summer before Year 11 is when I discovered Anki. I made decks for all my subjects, and with those decks alone (and solving past papers and of course with the grace of God), I achieved 8A*s, with 100 in Maths, 99 in Chemistry, Physics, and Additional Mathematics, 97 in Biology, and more than 95 on the rest of my subjects.

Later on, I continued to A-levels, where I self-studied my A-levels (both AS and A2) without a teacher or a school and completed them all in 10 months. I took all 23 exams in one May/June session, and achieved 4A*s, with the grace of God and using Anki and past papers as my only tools for studying. The exact breakdown of my grades was 99 on Maths, and 97 in all of Physics, Biology, and Chemistry. The same decks that I personally made that helped me achieve those grades are what are advertised, with some edits due to the updated syllabi.

That's why I believe that if you use my decks, and stick to them, you'll be able to raise your grade by 1 or 2 letters. I won't guarantee an A* (although that's what it helped me achieve), but if you use Anki properly, and you stick to my decks and make sure to do all the reviews, you should definitely be able to solve past papers more confidently and increase your grade. I need to emphasize that Anki was my one and only sole source of studying, which is why I am so confident that they should work for everyone.

For more questions or inquiries, contact my phone number at the top of this document via Whatsapp, as I do not check my Gmail frequently.
