

MOBILE LEAD DEVELOPER (React Native, TypeScript)

Location: Asia / EU preferred

Offramp is building a global USD account for emerging markets by combining the best of traditional financial rails and crypto. We're backed by leading venture capital firms including Alliance DAO, Orange DAO, and have recently raised a pre-Series A round from other tier-1 crypto VC firms.

We've entered a high-growth phase, and we're now seeking a **Mobile Lead Developer** with expertise in **React Native** and **TypeScript**. Ideally (although not required), you've worked at a high-growth Series A or B tech startup before. Experience in Web3 is a plus, and crypto-native users will have an added advantage.

What we offer:

Fast career growth, fulfilling work, an attractive salary + stock option package, great (and low ego!) colleagues, and the opportunity to be a crucial member of a world-class startup.

Key Responsibilities:

- Design, develop, and maintain mobile applications using React Native and TypeScript.
- Collaborate with cross-functional teams to define, design, and ship new features.
- Ensure seamless integration between mobile clients and backend services.
- Work on backend interactions, including consuming APIs, managing data flow, and optimizing performance.
- Ensure the performance, quality, and responsiveness of mobile applications.
- Identify and resolve bottlenecks, fix bugs, and ensure system reliability.
- Write clean, well-documented, and maintainable code, including thorough documentation of workflows, processes, and implementations.
- Contribute to maintaining code quality, organization, and automation.
- Stay updated with the latest industry trends, tools, and technologies.
- Apply a foundational understanding of how mobile systems are built from the ground up, with a focus on scalable and modular architecture.
- Collaborate on infrastructure planning and deployment to ensure robust and efficient operations.

Who we're looking for:

- Bachelor's degree (or higher) from a top university.
- A minimum of 5 - 7 years of experience in mobile development, with a focus on **React Native** and **TypeScript**.
- Strong understanding of client-to-server interactions, including REST APIs and WebSocket communication.
- Familiarity with backend systems and architecture; direct experience in React and backend development is a plus.
- Experience with database technologies (e.g., SQL, NoSQL) and cloud platforms (e.g., DigitalOcean, Azure, or AWS).
- Proficiency in version control systems, particularly Git.
- Ability to write clean, well-documented, and maintainable code.
- Knowledge of the software development lifecycle and how to build scalable systems from the ground up.
- Strong problem-solving skills and the ability to work independently or as part of a team.
- A genuine interest in fintech and blockchain technology is a plus.

Please send over your CV to hire@offramp.xyz with the title "Application - Mobile Developer (React-Native)" along with your Github profile. We'll promptly reach to all qualified candidates for a first round interview. If successful, this will be followed by a technical interview (2nd round), and a final round with our founder and the rest of the team.
