

Location and Sheets

Thunkable Conceptual Worksheet

1. Consider the following blocks and “testmap sheet:

A	B	C
lat	long	ID
37.1	-128.2	xyz
37.4	-128.9	qrs

Trace this code, showing how each variable and property changes. Assume the sheet's hidden IDs are set as shown in the ID column above (which is hidden in Google sheets)

2. sketch blocks for a “breadcrumb” app that records your path as you walk. Every ten seconds the app should place the current location (lat,long) into the spreadsheet, and the app should always show all of the latitudes that have been recorded in **ListViewer1**. Here are the blocks:
