## **Dog Lovers Should Use Salmon in Their Pet's Food**

Dog owners sometimes go to great lengths to assure that their friends are in good physical shape and living healthy lives. Though some of the things people do to improve their pet's health may be costly and complicated, there is one measure that can be very efficient, both in terms of money and the overall benefits: salmon oil for dogs. That's right. If we humans can get so many great benefits from eating salmon, then why wouldn't our furry little friends be able to do so, too? It turns out that dogs can digest salmon-and particularly the essential fatty acids found in salmon oil-quite well, and don't have to expend the bodily energy to convert such proteins. As opposed to what happens with plant-based essential fatty acids, which need to be converted by specific enzymes in the dog's digestive tract into proteins that its body can actually use, salmon-based fatty acids can be utilized by the dog's body just as they are, improving the over-all absorption.

Omega 3 and Omega 6 fatty acids, which are both so important for both dogs' health and well as humans' health, will give your dog a definite advantage and significant boost in physical endurance. Salmon oil for dogs is usually sold in veterinary hospitals, pet shops, or even perhaps major supermarkets or health food stores. Be sure to ask your vet, or consult the person selling the product or the label of the product itself, regarding how much to include in every meal your dog eats. Servings are determined primarily by the dog's weight, but also by age. Some dog food brands actually already have salmon oil included in the packaged product, in which case it is not necessary-nor recommendable-to add more.

Though it is possible to collect the salmon oils in the kitchen from a piece of (or entire) salmon you bought at the store, it is wiser to buy it as the manufacturers generally have scientifically balanced out the concentration of these proteins to a very precise level so as to deliver the maximum benefits without going overboard-after all, too much would not be productive for your pet's health, as is the case with most things in life. So, when looking for salmon oil for dogs, be sure to administer it prudently, and watch how wonderfully their health reacts.
