## Status display light colors on Meta Quest 3 and Meta Quest 3S

16 Likes

Updated:32 weeks ago

Meta Quest 3 and Meta Quest 3S are equipped with two types of status display lights (LEDs), a status display light and a bystander signaling display light.

### Status display light

The light on the side of your Quest 3 headset lets you know the status of the headset, including its battery charge state.

Status light color	What it means
White	Headset powered on
Green	Battery fully charged
Orange	Battery charging
Red	Dead battery

### Bystander signaling display light

The display light on the front of your headset lets those around you know if the sensors on your headset are engaged, and if bystanders may be in your field of view.

Status light color	What it means
White	External sensors active
Blinking white	Passthrough is on and headset is casting, recording, or livestreaming
