

Nativ: A Next-Generation AI-Powered Digital Economy LaunchingIDO on BinStarter June 5

We're proud to welcome **Nativ**, one of the most ambitious blockchain projects of 2025, to the BinStarter launchpad! This **TRP-protected** project brings a powerful mix of **AI, blockchain, virtual real estate, and a fully interactive economy** to the Web3 space—redefining how users earn, invest, and interact in the digital world.

The **IDO launches on June 5, 2025 at 16:00 UTC**, with the **\$NTV token listing scheduled for June 10, 2025**. Backed by one of the industry's most comprehensive economic systems and developed in collaboration with blockchain powerhouse **Tenset**, Nativ is more than just a virtual world—it's a living, breathing ecosystem designed to replicate and enhance real-world investment opportunities in a fully immersive digital format.

Key Metrics

Public Sale Price: \$0.000060

Blockchain: BASE

Allocation: \$300 K

Initial Market Cap: \$349,650

Vesting Schedule: 25% TGE, linear vesting over 4 months

Sale Link: <https://binstarter.ai/launchpad>

Game Highlights – Where Strategy Meets Innovation

Nativ transforms traditional metaverse concepts into a **next-gen economic game**, driven by ownership, strategy, and innovation. Here's how:

-  **Develop portfolios** of digital assets like land, businesses, and NFTs.
-  **Let AI-driven insights** optimize your trades, collaborations, and investments.
-  **Gain prestige and influence** with Passport NFTs and leaderboard rankings.
-  **Build your empire**, earn rewards, and grow with the economy—every action counts!

Launching Nativ Metaverse | The first Metaverse project ...

What Is Nativ?

Nativ is an AI-enhanced, blockchain-secured **business and real estate metaverse** built on a virtual Earth environment. Unlike most fictional metaverses, Nativ maps its virtual land directly to **real-world geographic locations**, offering users (called “Nativs”) the opportunity to **own, develop, and monetize digital versions of actual global landmarks and neighborhoods**.

Through a blend of **NFT-based land ownership, resource acquisition, digital business creation, and marketplace trading**, Nativ enables participants to build and manage virtual enterprises using real economic strategies and AI-powered insights.

Why Nativ Stands Out

Real-World Mapping

Unlike sandbox-style virtual lands, every plot in Nativ corresponds to real-world geography. From city centers to remote deserts, land value is determined by **real-life prestige, accessibility, and potential resource deposits**.

AI-Driven Asset Management

Nativ uses AI agents to assist users in making smarter investment decisions—whether buying a plot, developing infrastructure, or operating a business. These agents provide market analytics to help users **maximize returns and efficiency**.

NFT Utility Beyond Art

Nativ’s NFTs are not static collectibles. Instead, they serve **functional purposes within the ecosystem**, such as:

- Development Enterprise NFTs (needed for construction)
- Transport NFTs (enabling mobility across the world)
- Resource NFTs (like oil, gold, energy plants)

These NFTs can be **rented, sold, or used to earn rewards**, creating a **fully gamified and economically active environment**.

No Traditional Staking, No Lock-In

Nativ doesn't rely on standard staking mechanisms. Instead, rewards are **earned through participation, trade, and services rendered**, reinforcing a healthy, activity-based economic loop.

Governance with Real Impact

Engaged users climb the **leaderboard** and gain governance privileges, including regional executive roles that let them **shape the development of their digital territories**.

Development Status – 100% Complete & Self-Funded

Nativ is **fully developed** and ready for deployment immediately after TGE. In a standout move, the platform was **entirely self-funded**—with the founding team investing **\$1.6 million** of their own capital.

This not only showcases a deep conviction in the project's vision but also ensures that the product was built **without VC dependency**, allowing for true community empowerment, transparency, and long-term alignment with users' interests.

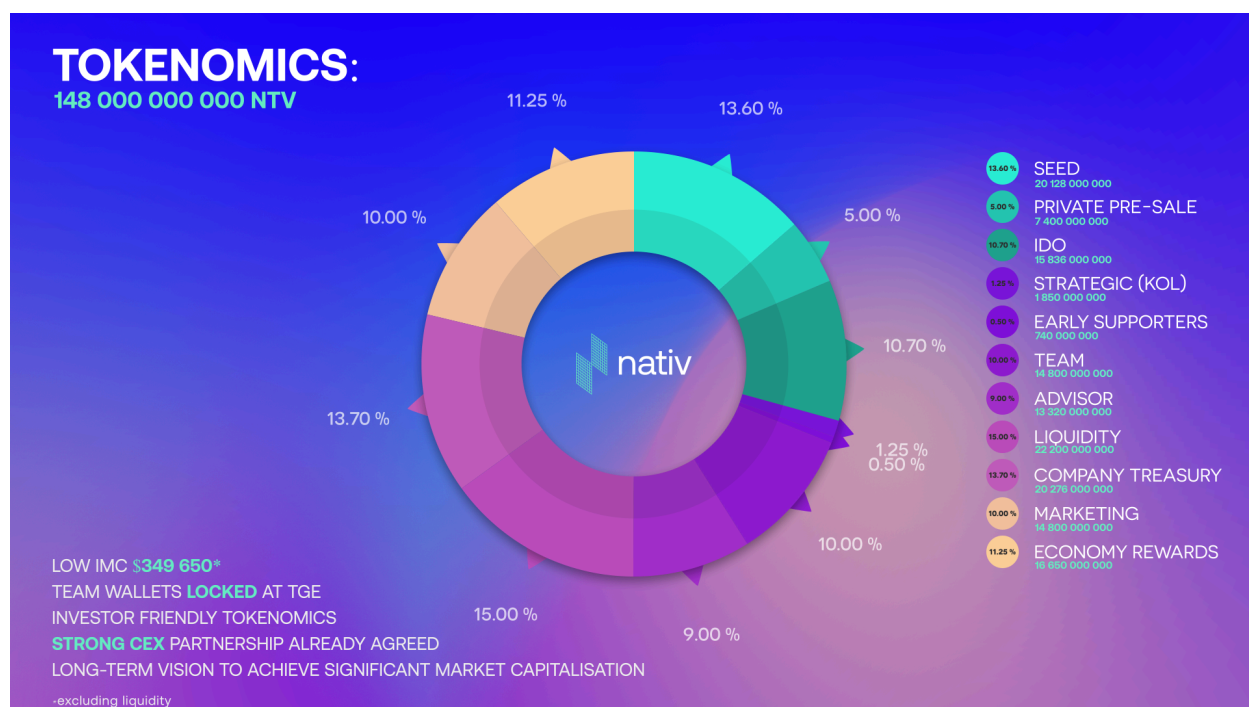

Tokenomics at a Glance

Nativ's tokenomics are designed with long-term sustainability and investor alignment in mind. The total supply is **148 billion NTV tokens**, distributed strategically across key stakeholders to ensure healthy ecosystem growth and responsible token circulation.

Every transaction on the Nativ marketplace incurs a **duty fee**, a portion of which is:

- **Burnt** to reduce total supply
- **Redistributed** to landowners
- **Reinvested** into ecosystem development

This ensures a **self-sustaining, deflationary economy** with long-term value appreciation.

Backed by Tenset & Built for Mass Adoption

The Nativ team has partnered with **Tenset**, a leader in blockchain development and crypto launch support. Tenset has been instrumental in building Nativ's infrastructure **before the public sale**, setting it apart from many metaverse concepts that launch with incomplete ecosystems.

Moreover, the project's **marketplace, smart contracts, and token economy** have been independently audited to ensure **security and transparency**—a key requirement for serious investors.

Roadmap

Nativ has made impressive progress ahead of launch. The core product is **fully complete** and currently in **beta on the Base testnet**, with a **full release expected by late June**.

Pre-launch milestones—including listings on **CoinMarketCap**, **CoinGecko**, and integrations with **CEX and DEX platforms**—are on track, maintaining momentum in the lead-up to IDO and token listing.

Nativ IDO on BinStarter – June 5th, 2025

This is your chance to be part of a **first-of-its-kind, AI-powered digital economy** with real-world value. Nativ's IDO on BinStarter is also **protected by our Time-Sensitive Refund Policy (TRP)**, offering our community added peace of mind when investing.

Nativ isn't just building another metaverse—it's launching the **future of AI-driven digital business, real estate, and user-powered economies**. With Tenset's support, a dedicated team, and an economic model rooted in sustainability, Nativ could become a cornerstone of the next era in Web3.

Follow Nativ and BinStarter for updates and announcements—and **get ready to go Nativ on June 5th**.
