2. European Digital Student Service Infrastructure L2

2.1. Context

The EDSSI L2 project builds on the EDSSI project, which aims to harmonise the operation of the different building blocks of the digital Erasmus+ ecosystem, mainstream the usage of secure authentication and extend the interoperability network to the student service providers. EDSSI created a core infrastructure that provides students with a seamless mobility experience.

The EDSSI L2 project continues and complements the work that has been started in the first EDSSI project. It will

- enhance the authentication services for the infrastructure,
- fine-tune the operation of the Data Exchange Network and
- create a new standardised software component for seamless NFC interoperability of Student eCards.

For 2025, this will provide a student eCard that enables for example eSignature, so students can sign documents with a single click during their mobility administration processes.

The overall project will align with the roll out of the Erasmus+ digitalisation roadmap and the European Student Card Initiative (ESCI).

Core Values	
Mobility empowerment - We are tearing down the structural barriers to student mobility. It takes student e-services to the next level and empowers all actors along the mobility chain. It stimulates student mobility by digitising administrative procedures and therefore simplifying the access to e-services.	Inclusive Higher Education - Nobody is left behind. Whether you are a small or large Higher Education Institution, have an advanced IT infrastructure or a basic one, EDSSI provides you with solutions to connect to Europe's student e-services. It widens your students' opportunities and facilitates mobility.
Evolving union - We are breaking silos in the organisation and provision of student mobility. It contributes to the digitisation of student mobility processes and encompasses all relevant digital student mobility initiatives under its umbrella.	Reliability - Forged on EU standards and regulations, we offer an approved and trusted connector to Europe's student e-services. Users can access all European student e-services in a transparent and seamless manner, according to the Once Only Principle. It is made simple for all Higher Education student mobility actors to use a solution based on open standards and clear EU policy regulations (including GDPR).
