

What other technology platforms do you use or is it just iPads?

The students just have iPads; that's the computing platform that we use with them. But we do have other computers in the school. The teachers have all got Macs and so students are seeing a range of different platforms in use during the school day.

But we found that it really helps us in managing it financially, if we kind of pick one platform and really use it in the best possible way. It means that we can afford so that every child has got a device. And I think that was more important for us than meaning that they get to use a range of operating systems.

But it's not that we just use Apple products. So we've got Lego Robotics that we use. We've got different styluses that we can use with the children, and we actually use a range of different software as well. So the students all have Microsoft accounts that they use to log into their Apple IDs and allows us to kind of tie together lots of different online services they use. Showbie as our learning platform, which is a great product, helps us manage all that learning on the iPads. And the staff in the school use Google Drive as a way of managing all that cloud storage of documents. So we find that the Apple platform allows us to use a range of other services out there at the same time.
