ARTICLE INFO	ABSTRACT
Date received :	An abstract must accompany each manuscript; This abstract must be completely consistent on its own (eg, without numbers, tables, equations or reference citation), not exceeding 250 words and written as a paragraph. The abstract should include research objectives, methodology, and findings.
Revision date :	
Date received :	
<i>Keywords:</i>	
<i>Provide 4-6 keywords</i>	
<i>Key words 1</i>	
<i>Key word 2</i>	
<i>etc</i>	

INTRODUCTION

The contents of the paper must be spelled between 6500 - 7,000 words (maximum) including abstracts, references and footnotes, written in font: Arial, size: 10, line spacing: Single (1). In addition, authors are required to use this template file (NOT create a new file) to avoid mismatches in the layout of the entire page (paper size, margins, etc.).

The body can be divided into several parts. The portion must be thick. Subsections must be in bold. Whichever spelling you choose (British or American British) please be consistent. Use hyphens consistently and avoid unnecessary ones. The words "part (s)", "equation (s)", "number (s)" and "reference (s)" are abbreviated as "sect (s).", "Fig (s).", "Equation (s). "and" ref. " unless they are the first word of a sentence. The word "table" is always written in full. Latin expressions, such as, e.g., eg, et al., Versus (vs.) must be set in italics. All terms or titles in Arabic must be transliterated following the guidelines of the Library of Congress. People's names cannot be transliterated.

Reference must use bodynote by using Mendeley application.

METHOD

This study uses qualitative approach method that The method used must be accompanied by a reference; relevant modifications should be described. Data analysis procedures and techniques should be emphasized in the literature review article. The stages and analysis of the research should be described in detail.

RESULTS AND DISCUSSION

The results should be clear and concise. Discussions should explore the importance of the work result, not repeat it. The combined Results and Discussion sections are often appropriate. Avoid widely published citations and discussion of literature and the novelty of the author's journal.

JSS will do the final formatting of your paper, so you don't have to position numbers and tables at the top and bottom of each column. In fact, all pictures, captions, and tables can be at the end of the paper. Large figures and tables can span both columns. Place an image caption under the image; put the table title above the table. If it is difficult to arrange pictures and tables in the right place, they can be placed at the end of this template.

CONCLUSION

Conclusion contains the main points of this article. It should not replicate the abstract, but may outline significant results, possible applications and job extensions.

The conclusions of this study are presented briefly, narrative, non-bullet, and conceptually. The impact of the research must be stated.

REFERENCES

References are written in Tahoma 10 font style, alphabetically and chronologically. When writing a reference list, please use the following conventions.

Reference adopts APA citation and reference style 6th edition. Link guideline for reference could be found in the following:
