Project Description

Recreotherapy is a social enterprise that aims to keep people with disabilities, older adults and caregivers active, connected, stimulated and engaged and to provide a sense of meaning, purpose and joy through brain healthy activities.

Recreotherapy consults with other organizations on designing, implementing, and evaluating large-scale programs and events to focus on optimal living and optimal aging. Finally recreotherapy offers training on dementia education, relationship-centered care, and recreation therapy.

In order to best serve our population, several tech solutions are needed:

1. Website and Database

- update website to include programs and services, social media links, blog, appointment booking, and community engagement

- database for keeping track of network and for following clients (assessment, documenting, evaluating, referring, etc). Database needs to be able to generate reports

2. Tool for matching students and seniors

- an online tool (like a dating app or penpal matching) that will collect information about students and older adults interested in participating in an intergenerational “adopt a grandparent” program where profiles are created and matches can be made.

3. Age and dementia friendly video conferencing platform

- developing a new platform for videoconferencing that is accessible, very easy to use, simple and age and dementia friendly

- to ultimately be used for a virtual day program for seniors

4. Appropriate support and maintenance documentation for all aspects of the project.
