

#EducatorVoices: Humans Are Central – Maryrose Hembd

Maryrose Hembd 0:00

My name is Maryrose Hembd, and I'm an Academic Innovation Consultant with Packback. I will say, I don't see a world where humans are not absolutely central to teaching. I don't see AI-led classrooms, and it's only in AI, right? I think, just the centrality of humility, and humanity, and knowing your students, so I think the continued time savings from AI, I think feedback gets more personalized, increasingly personalized. And I think that the instruction becomes about how to use AI, how to prompt it, how to direct it, right? And I think, far off from that, how do we make algorithms? I see a world where we have custom algorithms to match certain rubrics, and standards, and things like that, so districts can deploy AI in a way that's aligned with their strategic goals. But I think customization is the way that that goes, and then giving that time back to educators to infuse the human side and the thing only humans can do.
