

Froonze: Full Stack Engineer (RoR + Vue or ready to switch)

Tech skills: Ruby, Ruby on Rails, Javascript, Vue.js, Shopify, GraphQL

To apply: <https://forms.gle/2v9AqWay8t9Y1ceDA>

Pay: negotiable

Job Type: Contract

About Us:

We are a small team of 4 running a Shopify app. We chose a relatively small niche to compete in, so we could test whether we had what it takes to succeed. About a year later we dominated that niche! We are now serving more than 5000 merchants!

During that time, we have gone through impressive personal growth. We learned a lot and got confidence.

Now we are ready to get into one of the biggest niches in the market. And eventually we will dominate it too. It will take a few years, but we know we can do it! We can do it only with your help.

****What you will do:****

- Maintain our existing app and help build a new one.
- Create entire big modules from scratch.
- Tackle lots of interesting challenges.
- Help us reach 100k merchants!

****Who are you?***

- A damn good full stack developer (senior level).
- You can think as an end user and can implement features not only technically robust, but also easy to understand and use
- You are comfortable working both on front and back end, and can even contribute to UI/UX discussions.
- Detail oriented, eager to learn and go deep, a team player.
- You naturally like building and solving complex problems.
- You've worked on multiple interesting, complex projects and you are proud of the way you built them.
- Ideally you have a good knowledge of Ruby on Rails + Vue.js.

- If you haven't worked with RoR or Vue.js, but are very good at similar frameworks, e.g. Django + React, and willing to switch to our stack, we are open to consider.
- Knowledge of ElasticSearch, AWS and deployment tools could be a big plus.
- Good English is a must.
- You are fine with having at least 4-hour overlap with Vietnam(GMT +7) 9am-6pm

****Salary is negotiable.****
