Extracting EVUSA Club email addresses from EVUSA Website

Revision date: 12/23/2023

Club managers will wish to email potential competition attendees about their competitions, as one method of publicizing the competitions.

Also, by EVUSA Bylaw, for Recognized Competitions, competition management is **required** to notify all EVUSA-Registered Clubs in their Region about their competition.

This script illustrates how to use the EVUSA website to access the most up-to-date information about Registered clubs and to extract their email addresses, using either a Google Sheets spreadsheet or Excel.

Follow along with [this video](#), which shows all these steps.

Step 1: obtain club information from the EVUSA website

- Browse to equestrianvaulting.org and log in with your EVUSA username and password.
- You will land at *inside.equestrianvaulting.org*, where you can select Directories > Find A Club.
- If you want only the clubs in a specific Region, then select that Region in the "Select a Region" filter.

Step 2: prepare your spreadsheet

- Open either a Google Sheets spreadsheet or an Excel spreadsheet.

Step 3: Copy club info from EVUSA website into your spreadsheet

- Back on the list of clubs, select all the text on the page with either
  - Edit > Select All, then Edit > Copy, or do the same thing with shortcuts:
  - Ctrl-A, Ctrl-C
- Back to your empty spreadsheet. Place your cursor on block A1, and either:
  - Edit > Paste, or
  - Use the shortcut Ctrl-v

This will give you a disorderly-looking set of data like this:

	A	B	C
	Your Account		
	EVUSA Website		
	Directories		
	Find A Club		
	Select a State		
	Select a Region		
	Test Vaulting Club		
	test@vaultingclub.com		
	Phone: 4065551212		
	Fannie Flyer		
	Street		
	City and State		
	51212, USA		
	Sample Vaulting Club		
	sample@vaultingclub.com		
	Phone: 4065551212		
	Fannie Flyer		
	Street		
	City and State		
	51212, USA		

Step 4: Add the email extraction formula to a top cell

Into cell D1 (it doesn't really matter which cell, as long as it's the top one in a column), paste this formula exactly:

- For Google Sheets:
  =iferror(Regexextract(A1,"[A-z0-9._%+-]+@[A-z0-9.-]+\.[A-z]{2,4}"),"")

- For Excel: =IFERROR(TRIM(RIGHT(SUBSTITUTE(LEFT(A1,FIND(" ",A1&" ",FIND("@",A1))-1)," ",REPT(" ",LEN(A1))),LEN(A1))), "")

- Note for spreadsheet junkies: these may not be the best formulas, but they're ones I found which seem to work.

- The cell will stay blank-looking, because it is designed to look only for email addresses, and there is no email address in cell A1.

Step 5: Copy the formula down to the end of the data

Either grab the lower-right corner of your formula cell and drag it down:

	A	B	C	D	E	F
1	☒ The picture can't be displayed.					
2	Your Account					
3	EVUSA Website					
4	Directories					
5	**Find A Club**					

Or, highlight the whole column with your formula cell and Edit > Fill > Down:

	A	B	C	D	E	F	G
1	☒ The picture can't be displayed.						
2	Your Account						
3	EVUSA Website						
4	Directories						
5	**Find A Club**						
6	Select a State						
7							
8	Select a Region						
9							
10	**Test Vaulting Club**						
11	test@vaultingclub.com				test@vaultingclub.com		
12	Phone: 4065551212						
13	Fannie Flyer						
14	Street						
15	City and State						
16	51212, USA						
17	**Sample Vaulting Club**						
18	sample@vaultingclub.com				sample@vaultingclub.com		
19	Phone: 4065551212						
20	Fannie Flyer						
21	Street						
22	City and State						
23	51212, USA						
24	**Another Vaulting Club**						
25	another@vaultingclub.com				another@vaultingclub.com		
26	Phone: 4065551212						
27	Fannie Flyer						
28	Street						

Copy and paste the email addresses into an empty email

Please see the video. You should just be able to copy all the cells with an email address into an email header.
