

SAMPLE RStudio lab assignment: descriptive statistics

Assignment instructions

During this assignment, you will learn how to use **[Variables in GSS]** page, practice creating model codes and working codes skills, and interpreting outputs.

For each variable below, you will record the following details as seen in **[Variables in GSS]** page:

- 1) Paste Table # and Table name,
- 2) Paste variable name (**do not type**),
- 3) Paste variable label,
- 4) Paste variable type,
- 5) Paste question wording and response categories,
- 6) Paste the code you run for the question,
- 7) Paste the output (table or graph depending on the question),
- 8) Interpret the outputs.

Open [Variables in GSS] page:

- **Search in the site:** Windows: `ctrl` + `K` | macOS: `cmd` + `K`
 - Type and hit “enter”: Variables in GSS
 - Or use the link in the left navigation bar (Resources)

Searching variables in [Variables in GSS] page:

- **Search in the page:** Windows: `ctrl` + `F` | macOS: `cmd` + `F`

1) Frequency table of fear variable (10 points)

Find the fear variable in **[Variables in GSS]** page and fill out the table below.

Create a frequency table. Paste the code you used. Paste the output (take a screenshot of the output, not all screen) and interpret it.

1. Table # and Table name (-1):	Table 21. Miscellaneous																								
2. Variable name (-1 point):	fear																								
3. Variable label (-1 point):	Sense of neighborhood security																								
4. Variable type (-1 point):	Binary																								
5. Question wording and response categories (-1 point):	Is there any area right around here — that is, within a mile — where you would be afraid to walk alone at night? (1: Yes; 2: No)																								
6. Code (-5):	frq(gss\$fear, out = "v")																								
7. Output (10 points):	Sense of neighborhood security (Variable label) <table><thead><tr><th><i>value</i></th><th><i>value label</i></th><th><i>frq</i></th><th><i>raw.prc</i></th><th><i>valid.prc</i></th><th><i>cum.prc</i></th></tr></thead><tbody><tr><td>1</td><td>Yes</td><td>957</td><td>24.01</td><td>35.91</td><td>35.91</td></tr><tr><td>2</td><td>No</td><td>1708</td><td>42.85</td><td>64.09</td><td>100.00</td></tr><tr><td>NA</td><td>NA</td><td>1321</td><td>33.14</td><td>NA</td><td>NA</td></tr></tbody></table> <i>total N=3986 · valid N=2665 · $\bar{x}$=1.64 · σ=0.48</i>	<i>value</i>	<i>value label</i>	<i>frq</i>	<i>raw.prc</i>	<i>valid.prc</i>	<i>cum.prc</i>	1	Yes	957	24.01	35.91	35.91	2	No	1708	42.85	64.09	100.00	NA	NA	1321	33.14	NA	NA
<i>value</i>	<i>value label</i>	<i>frq</i>	<i>raw.prc</i>	<i>valid.prc</i>	<i>cum.prc</i>																				
1	Yes	957	24.01	35.91	35.91																				
2	No	1708	42.85	64.09	100.00																				
NA	NA	1321	33.14	NA	NA																				
8. Interpretation (15 points):	The sense of neighborhood variable shows that 35.91% of the respondents are afraid to walk alone at night and 64.09% of the respondents are not afraid to walk alone at night.																								

2) Bar graph of contv variable (10 points)

Find the contv variable in **[Variables in GSS]** page and fill out the table below.

Create a bar graph. Paste the code you used. Paste the output (take a screenshot of the output, not all screen) and interpret it.

1. Table # and Table name (-1):	Table 18. Confidence in institutions												
2. Variable name (-1 point):	contv												
3. Variable label (-1 point):	Confidence level in television												
4. Variable type (-1 point):	Ordinal												
5. Question wording and response categories (-1 point):	Would you say you have confidence in television? (1: A great deal; 2: Only some; 3: Hardly any)												
6. Code (-5):	<pre>plot_frq(gss\$contv, type = "bar", geom.colors = "#336699")</pre>												
7. Output (10 points):	<table><thead><tr><th>Confidence level in television</th><th>Frequency</th><th>Percentage</th></tr></thead><tbody><tr><td>A great deal</td><td>221</td><td>8.5%</td></tr><tr><td>Only some</td><td>1228</td><td>47.2%</td></tr><tr><td>Hardly any</td><td>1153</td><td>44.3%</td></tr></tbody></table>	Confidence level in television	Frequency	Percentage	A great deal	221	8.5%	Only some	1228	47.2%	Hardly any	1153	44.3%
Confidence level in television	Frequency	Percentage											
A great deal	221	8.5%											
Only some	1228	47.2%											
Hardly any	1153	44.3%											
8. Interpretation (15 points):	The confidence level in television variable shows that 8.5% of the respondents have a great deal of confidence in television;												

47.2% of the respondents have only some confidence in television, and 44.3% of the respondents have hardly any confidence in television.

3) Descriptive table of weekswrk variable (10 points)

Find the weekswrk variable in **[Variables in GSS]** page and fill out the table below.

Create a descriptive table. Paste the code you used. Paste the output (take a screenshot of the output, not all screen) and interpret it.

1. Table # and Table name (-1):	Table 6. Work												
2. Variable name (-1 point):	weekswrk												
3. Variable label (-1 point):	Weeks respondents worked last year												
4. Variable type (-1 point):	Continuous												
5. Question wording and response categories (-1 point):	In the previous year how many weeks did you work either full-time or part-time not counting work around the house — including paid vacations and sick leave? (Min: 0, Max: 52)												
6. Code (-5):	<code>descr(gss\$weekswrk, out = "v", show = "short")</code>												
7. Output (10 points):	Basic descriptive statistics <table><thead><tr><th><i>variable</i></th><th><i>variable.label</i></th><th><i>n</i></th><th><i>NA.prc</i></th><th><i>mean</i></th><th><i>sd</i></th></tr></thead><tbody><tr><td>weekswrk</td><td>Weeks respondents worked last year</td><td>3844</td><td>3.56</td><td>30.10</td><td>23.04</td></tr></tbody></table>	<i>variable</i>	<i>variable.label</i>	<i>n</i>	<i>NA.prc</i>	<i>mean</i>	<i>sd</i>	weekswrk	Weeks respondents worked last year	3844	3.56	30.10	23.04
<i>variable</i>	<i>variable.label</i>	<i>n</i>	<i>NA.prc</i>	<i>mean</i>	<i>sd</i>								
weekswrk	Weeks respondents worked last year	3844	3.56	30.10	23.04								
8. Interpretation (15 points):	The weeks respondents worked last year <i>variable</i> shows the average weeks respondents worked last year of the respondents is 30.10, with standard deviation 23.04.												

4) Histogram graph of maeduc variable (10 points)

Find the maeduc variable in **[Variables in GSS]** page and fill out the table below.

Create a histogram graph. Paste the code you used. Paste the output (take a screenshot of the output, not all screen) and interpret it.

1. Table # and Table name (-1):	Table 3. Respondents' parents and adolescence years
2. Variable name (-1 point):	maeduc
3. Variable label (-1 point):	Respondents' mothers' education in years
4. Variable type (-1 point):	Continuous
5. Question wording and response categories (-1 point):	What is the highest year of school your mother completed? (Min: 0, Max: 20)
6. Code (-5):	<pre>plot_frq(gss\$maeduc, type = "hist", normal.curve = T, show.mean = T, show.sd = T, geom.colors = "#336699", normal.curve.color = "#9b2226")</pre>
7. Output (10 points):	
8. Interpretation (15 points):	The respondents' mothers' education in years <i>variable</i> shows the average years of education of respondents' mothers' is 12.5, with standard deviation 3.5.
