

Technology Option #4

(K-5 Level)

Stop motion animation with a flip book!

Animated movies you see in a theatre are often created frame-by-frame on a computer. They used to be drawn page-by-page. Ever see Mickey Mouse and the Tugboat?

Watch the first YouTube video on how to create the book. Then watch the second YouTube video to give you an idea on how it works.

<https://www.youtube.com/watch?v=zo9OebWjbsQ>

You could really just have a snake moving across the pages. REMEMBER, each page has to move the character or object just a LITTLE BIT :) This creates the illusion of movement...just like in the animated movies.

Primary students can have a dot moving around the page or with added drops falling from the top, make it rain!

You can always bring in your finished flip book to show Mrs. Roberson!!
