

Visualization / Video Research & Teaching

All are encouraged to take notes but please ask one person to be a designated note taker for the session

It may be useful to take a head count and/or capture names and contact info within these notes for follow up conversations

William Cowan, Indiana University - has developed a plugin for Omeka to create custom playback for videos, CSS for video on large-screen devices, etc.

Mike Nutt, NC State - on large videowalls they have but don't have big plans for yet.

Ann Whiteside, Grad School of Design, Harvard - have a classroom with three video walls

Elisa Lanzi, Smith College - just requested large screen display, interested in content creation

Doreva Belfiore, Temple Univ - hot to serve video (w/ restrictions), interested in accessibility

Elaine Paul, UC Boulder, Art VRC - just installed large displays, Omeka for video streaming?

Jennifer Hecker, UT Austin Digital Archivist & Austin Fanzine Project- interested in visualizations for building interest & access points, and large video screens to better tell library/librarian stories

Francesca Giannetti, Music Librarian, UT Libraries (Austin) - discovery of digitized audio

Southwestern U - hoping new leadership will help modernize

Tara Spies Smith, Texas State Libraries - DH n00b, here to learn!

Jan Tidwell, Texas State Libraries -

Yack

Nutt - Displaying images BIG reveals low-quality images, need for context, needs to manipulate size/shape

Cowan modified CSS for customize display on large wall. Their "screen saver" is pulled from a list of Fedora objects (using persistent URLs)

Resources

Takes staff. Staff who know how to do this. And video takes lots of storage.

How do you go about allowing faculty/staff put content on the walls w/ the least amount of help from library?

Reminder that no content is ready to go off the shelf - needs curation, description, formatting, TLC.

question about use cases / personas

Nutt - personas based on real people, one faculty who would benefit most from the tech in each space (if we built this, who on campus would benefit most?) They'll be both a test case & your best advocate.

Hack

Let's make a list of video walls & interesting content examples

NC State

Brown

Let's make an Omeka template for video walls & share it on git
