- Chilled - non-defrosted milk, chilled between 0°C to 4°C right from the moment it was milked and chilled up to 72 hours and consumed up to 6 days. Require special order and delivery
- Contents are based on frozen condition unless specified.
- All grades have slightly different taste and texture from different type of farms
- Subject to stock availability. Please check before order
- We recommend to use cooler bag or box when transporting frozen or chilled goat's milk. Organic tends to defrost quicker than non organic.
- Most goat's milk has that slight goaty taste depending on your smell sensitivity especially pregnant ladies. Please let us know if you require less or no goaty smell :)
