

## Tattoo Aftercare Information

### Dermal covering:

Leave the tattoo dermalize on for up to 5 days. You can either remove it yourself in the shower, taking care to heat it using hot water to loosen the adhesive. You can then carefully peel it off the tattoo and wash as described as below.

If the dermalize falls off before the fifth day you can either reapply if you have been given spare, or continue directly with the aftercare.

### Cling Film covering:

#### Day 1:

You can wash your cling film wrapped tattoo for the first time 3 to 5 hours after application. Wash it with water as warm as you can tolerate (obviously be careful and do not burn yourself). Wash the tattoo with an unscented soap for 30 seconds (some examples are sanex, dove soap bar, simple soap).

Pat the tattoo dry with a paper towel (do not use anything that could leave loose fibres on the tattoo, like a towel). Leave the tattoo air for 5 to 15 minutes and rewrap with cling film for the night.

#### Day 2-5

Wash your tattoo and pat dry, apply a small bit of your desired aftercare cream. If you're in a dusty or dirty environment or if there's a chance of getting your tattoo dirty, cover it

Once your tattoo is nearly healed it will become dry and flaky, switch from your aftercare cream to an unscented untinted moisturiser
