Podcast Notes
Episode 1, “HBCUs in the Tidewater and Beyond”

Hosted by: Annie Eng, T. Green, Charlie LePage, Christina Richardson

165 years ago, the first Historically Black College and University’s were founded in America. 165 years later, HBCUs all around the country still face many of the same challenges they did at their establishment — financial literacy, visibility. “HBCU’s in the Tidewater and Beyond”, an episode of the Tidewater Project, focuses specifically on Hampton University, its history, a unique project regarding NASA, and how we can help HBCUs in America today. This episode is hosted by Annie Eng, T. Green, Charlie LePage, and Christina Richardson — students at Christopher Newport University in Newport News, Virginia. This podcast features an interview with Dr. William Moore, an associate professor in Hampton University’s Planetary and Atmospheric Sciences program.
