

Wellena Hand Sanitizer Email 1:

Title I: I've found a Hand Sanitizer for You

Title II: This hand sanitizer is in stock now

I'm so happy to share with you my dear friend, Magdalena's new Wellena Hand Sanitizer **(Insert your Affiliate Link)** is available, despite all the shortages! It contains 70% ethanol (alcohol) which, according to the C.D.C, is effective at killing the current virus. You can use it on your hands but also surfaces.

This product has personal importance to us now. It's been troubling to see how many people now are getting sick.

As it stands, the spread of the infection is happening very rapidly, and the mode of transmission is through water droplets that we transfer through coughing, sneezing, saliva, mucus - but also the bags and produce we bring back home.

This hand sanitizer can be used on both - your hands and various surfaces - including door knobs, steering wheels, car seats, and packaged goods.

Let's be clear: Handwashing with soap (at least 20 seconds) is still the #1 method of prevention for the virus, but it's not always possible. You may need to venture out for essentials like groceries or the bank, and we're all touching computers, phones, and other items throughout the day. You may also head out for a bit of exercise (maintaining 6 feet of social distance, of course).

Effective yet clean and non-toxic

Wellena hand sanitizer is effective and also free from toxic ingredients like solvents, fragrances, and dyes. The leading market sanitizers (also sold out) have ingredients that can be harmful. Wellena is a simple and clean product.

It's important to support all your body's systems in every way possible during this time. A healthy body is better able to deal with the "bugs" and viruses that come along its way.

What's in Wellena Hand Sanitizer?

Wellena Hand Sanitizer **(Insert your Affiliate Link)** contains 70% alcohol, which is in compliance with C.D.C.'s requirement for a hand sanitizer to be effective in killing the current novel virus, as well as bacteria.

It only uses 3 safe ingredients: Ethanol (alcohol), glycerin and xanthan gum. Nothing else.

Glycerin is a naturally derived substance that is used as an emollient; making skin moist, soft and supple. Xanthan gum thickens the product to make it more gel like.

Not all hand sanitizers are created equal; the market leading brands use hormone-disrupting and cancer-causing chemicals.

Wellena Hand Sanitizer is effective, yet clean and safe.

Highlights of Wellena Hand Sanitizer:

- Non-toxic
- Unscented
- Contains only three ingredients: Ethanol (alcohol), glycerine and xanthan gum
- No hormone-disrupting fragrances
- Vegan and gluten free
- Use on surfaces as well as hands
- Easy to carry in your purse when on-the-go (it's 4oz, or 120ml)
- Less irritating to hands compared to other cleansers and sanitizers
- Add essential oils to make your own fragrance

Why does it cost more than before?

The price of the bottle is \$13.40 (or \$11/bottle for a pack of 12 + free shipping). Yes, that's more than before the pandemic. The current availability of ethanol, bottles and caps is extremely scarce; partly due to China being shut down for so long.

You can get Wellena Hand Sanitizer here **(Insert your Affiliate Link)**.

Wellena Hand Sanitizer Email 2:

Title I: Where to get a Non-Toxic Hand Sanitizer (in stock now)

Title II: I've got a non-toxic hand sanitizer for you (but limited stock)

Hello,

My dear friend, Magdalena, introduced her Wellena Hand Sanitizer **(Insert your Affiliate Link)** last week and the response from the community has been amazing.

This hand sanitizer is clean and simple — it has 70% ethanol (alcohol), which according to the C.D.C, is effective at killing the current virus. You can also use it to disinfect both your hands and surfaces.

Just a friendly reminder, hand washing is still the #1 method for preventing the virus, but it's not always possible to get to clean water and soap - for example, when you go shopping or run a few errands.

Not all brands are made the same. Leading brands like Purell use hormone-disrupting and carcinogenic chemicals. While we recognize that using any hand sanitizer is better than nothing, we wanted to bring you a cleanser that was both effective and safe.

	PURELL	WELLENA
Antibacterial	✓	✓
Antifungal	✓	✓
Dye Free	✗	✓
Toxin Free	✗	✓
Fragrance Free	✗	✓
Hormone-Disruptor Free	✗	✓

Here are a few concerning ingredients and their effects found in Purell and Lysol:

Fragrance (Parfum) — these are phthalates; immune toxicant, respiratory irritant/toxicant, likely contains hormone-disrupting compounds.

Tocopheryl Acetate — may be contaminated with pesticides. May contribute to cancer. Strong evidence for allergic dermatitis.

Aminomethyl propanol — may be contaminated with pesticides (Nitrosamines and Oxazolidines). Irritating to eyes, skin, or lungs.

Alkyl Dimethyl Benzyl Ammonium Chlorides (C12-16) — This ingredient gets an “F” rating from EWG for “Highest Concern.” The EPA has concluded that this chemical poses a high risk for human health. Peer-reviewed research indicates this compound could cause reproductive problems in both men and women.

Myristalkonium saccharinate — This ingredient gets a “D” rating from EWG for “High Concern.” Peer-reviewed research indicates this compound could cause reproductive problems in both men and women.

Wellena is a product that is effective, yet clean and safe.

How Wellena Hand Sanitizer can help you:

- Kills the new virus — it contains 70% ethanol
- Is completely non-toxic
- Contains only 3 ingredients: Ethanol (alcohol), glycerine and xanthan gum
- It moisturizes your hands (because of the glycerine)
- Contains no hormone-disrupting fragrances
- Is vegan and gluten-free
- Can be used on surfaces as well as hands
- Easy to carry in your purse when on-the-go
- Is less irritating on your hands compared to other cleansers
- A neutral-smelling cleanser that allows you to add your own essential oils

Wellena only uses safe ingredients such as ethanol (alcohol), glycerin and xanthan gum. Glycerin is a naturally derived substance that is used as an emollient; making skin moist, soft and supple. Xanthan gum prevents the separation of the ingredients and thickens the formula.

Our sanitizer can be used on not just your hands but other surfaces like door knobs, steering wheels, car seats, and packaged goods (yes, the virus can travel on packages, too)

Why does it cost more than before?

The price of the bundle is \$11/bottle for a pack of 3,6 or 12 + free shipping). This is more than before the pandemic. The current availability of ethanol, bottles and caps is extremely scarce; partly due to China being shut down for so long.

Wellena has gone to great lengths to make this product available and give you a peace of mind.
