

FSSA ANNOUNCES CREATION OF NEW PFAS TASK FORCE

The Fire Suppression Systems Association (FSSA) has created a PFAS Task Force. During FSSA's annual forum in February, concerns regarding PFAS and other industry changes highlighted a need for the association to take action to help educate, advocate, and be a resource for the fire suppression industry as PFAS updates continue to make an impact.

The FSSA PFAS Task Force has developed its objectives and responsibilities and has begun creating material to share with FSSA membership and the industry. More than 30 members have committed to serving on the task force.

The FSSA PFAS Task Force will primarily focus on these four areas:

1. PFAS science
2. Government and regulatory information
3. Industry resources
4. Communications

The FSSA holds an annual forum consisting of industry-focused educational sessions, networking opportunities, and shared interests for manufacturers, installers, students, and other organizations within the fire suppression industry.

For more information on how you can stay up to date on PFAS updates from FSSA, attend the next annual forum, or become a member of FSSA to be a resource and advocate for the fire suppression industry, visit our website at fssa.net.
