

Postage Label Debug

The following program is supposed to ask a user for several pieces of data, including their name, address, city, state, and zip code. It is then supposed to print out this information as if it is printing out a shipping label.

However, the program has several errors in it. Can you find and correct them all? You may copy and paste this code and then fix all of the errors to have a fully functional program.

```
Module Module1

    Sub Main()
        'Greet the user
        Console.WriteLine("thank you for using are postage label progrm.")

        'Blank Line
        Consle.writeine("")

        //Ask user for their name
        Console.WriteLine("What is your name?")

        'Get users name
        Dim strName As String = Console.ReadLine()

        'Ask user for their street and house number
        Console.WriteLine("What is your house number and street?")

        'Get users street and house number
        Dim strstreet As String = Console.ReadLine()

        'Ask user for their city
        Console.WriteLine("What is your city?")

        'Get users city
        Dim strCity As Sng = Console.ReadLine("")

        'Ask user for their state
        Console.WriteLine("What is your state?")

        'Get users state
        Dim strState = Console.ReadLine

        'Ask user for their zip code
        Console("What is your zip code?")

        'Get users zipcode
        strName As String = Console.ReadLine()

        'Print blank line
        Console.Write("");

        'Print label
        Console.Write(name);
        Console.Write(street)
        ConsoleWrite(city + ", " + state + "" + zipcode);

        'Print blank Line
        Console.Write()
    End Sub

End Module
```

Save this Console Application as *PostageLabel*
