Inline text definition of target size

Summary

([Previous version of this doc](#) with lots more working.)

Iterating from the last meeting, the new proposal is:

Inline: The target is in a sentence, or the size of the target is otherwise constrained by the line-height of non-target text.

Inline: The target is in a sentence <mark>or in a list in the main content on the page,</mark> or the size of the target is otherwise docs;

Inline: The target is in a sentence, <mark>or is in a bulleted or numbered list,</mark> or its size is otherwise constrained by the line-height of non-target text;

Inline: The target is in a sentence <mark>or lists not for top or side navigation,</mark> or the size of the target is otherwise constrained by the line-height of non-target text;

*** Note on internationalisation of line-height.
*** Errata to align AAA version.

You can consider that to mean: Increasing the size of the target would increase the inter line spacing of non-target text.
Therefore, if you have a list with some items that include non-link text and some that don't, you consider the list as a whole.

The table below aims to compare the current text with the new proposal. Examples are from this [Wiki page](#) unless otherwise linked.

Example	In scope of "The target is in a sentence or block of text;" Y means excepted.	In scope of "The size of the target is constrained by the inter-line-spacing of non-target text."
Article Talk	N	N

	N	N
	Not sure?	Y
	N	N (Note that the numbers are part of the target)
"WWWC" redirects here. For the radio station, see WWWC (AM). *Not to be confused with the World Wide Web Foundation.*	Y	Y

W3C/Internet Engineering Task Force standards (over Internet protocol suite) ...	Y and N, so do, some don't	Y and N. There is sufficient inter-list-item spacing, so individual links with no text are not excepted. Where there are multiple targets within a list-item, those would come under the exception.
Coordinates: 42°21′43″N 71°05′26″W	N	N
Contents [hide]	Y? Not sure how to interpret that. Not a sentence?	N (the line height is sufficient for increasing the height.)

Conclusions from testing a Wiki page:

- Individual punctuation items do not count as "text", e.g. a colon;

- Metanav: 👤 Not logged in   Talk   Contributions   Create account   Log in   Would be excepted, due to non-link text.

- If some bullets do include non-link text, and others don't, then all are excepted (if they are in the same list), as they are all dependent on the same line height.

- Left nav is not covered by the exception. Although the headings are non-links, they are separate from the lists of links.

- Ordered lists with numbers / letter **would** count as text, therefore are always excepted.

- Question about markers of lists, as the markers for ordered lists could be 'text', but bullets wouldn't be 'text'.
  Suggestion for understanding doc: Indicators for ordered/unordered lists *are* considered text.
