

Design Science Synarchy

Intro

"Synarchy — The universal principle through which collective intelligence naturally aligns itself in perfect harmony with all that is. Synarchy is the underlying nature of humanity that can only be known once it has emerged from the Shadow frequencies. As the new collective consciousness dawns all across our planet, humanity will self-organise its creative genius and manifest the true higher purpose hidden in its DNA — to bring about the New Eden. Whereas the Shadow consciousness manifests on the material plane through the principle of hierarchy, and the Gift consciousness through the principle of heterarchy, the siddhic consciousness manifests through the principle of synarchy."

-- Richard Rudd in The Gene Keys: Embracing Your Higher Purpose

Vision

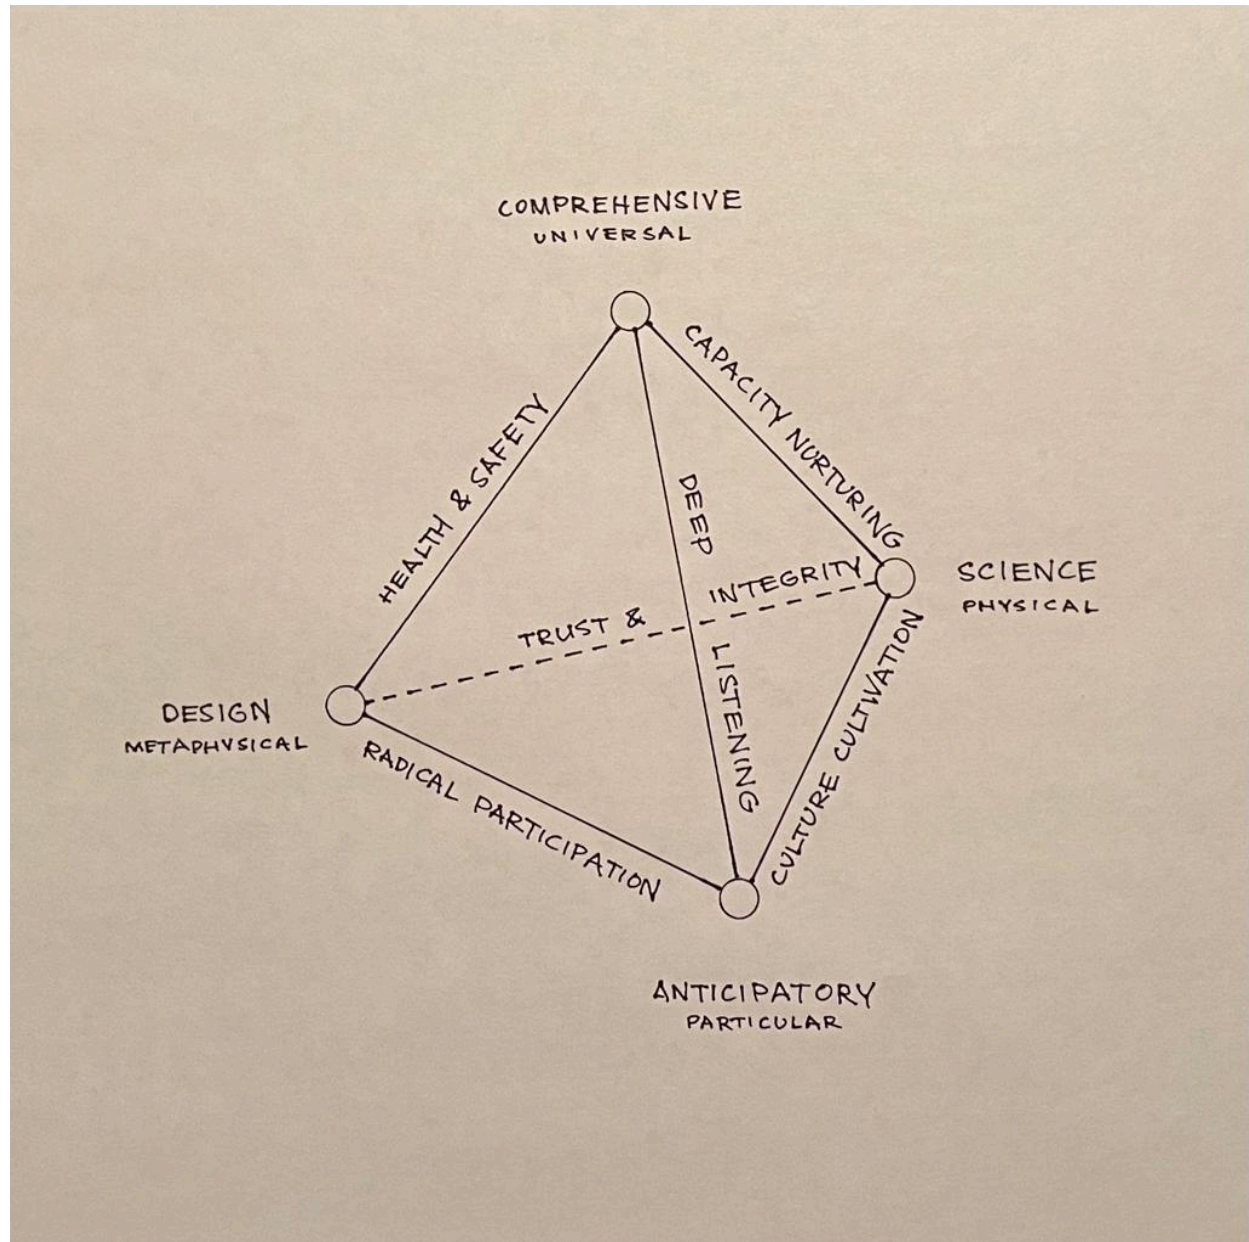

Where would you start first (from your personal perspective) if there were financial possibilities on the part of cultural funding?

- We would build a team to help onboard a group of highly sensitive, emotional, intuitive, and creative people in a nurturing space for growing a resilient, healthy, supportive, and collaborative community
- The Design Science Studio would be nurtured as a community to be a prototype of a social organization based on regenerative principles inspired by the complexity, the diversity, the resilience, and the self-organizing and reproductive capacity of living organisms
- While Project Drawdown focuses on the most effective ways of mitigating the destructive effects of climate change, the Design Science Studio focuses on the creative capacity, energy, and agency of a network of highly motivated individuals to become a self-organizing learning community

- We would connect local bioregions into a global network of regenerative practitioners to share tools and resources for a movement that integrates the development of inner architecture with our outer architecture
- We would activate our spheres of influence from personal to local to bioregional to ecological to global as connection and conversation and relationships become the language and medium of regenerative cultures
- Our problem is not a lack of solutions. Our problem is a lack of cooperative community with a shared intention to focus their time, energy, and resources on being a regenerative organism.
- We focus less on man-made technology to save us and focus more on nature's technology of consciousness, perception, cognition, emotion, and action to live in symbiosis and harmony with nature.
- By slowing down, we allow nature to regenerate and we allow ourselves to heal.
- By slowing down, we can remember how we became the empathic social species that thrives on cooperation.
- By slowing down, we breathe in and breathe out and remember that we are not over nature. We are nature. We remember our nature as those who care for each other.
- By slowing down, we remember to care, to share, and to be compassionate.
- By slowing down, we create a culture of peace and love.
- By slowing down, we learn to navigate metaphysical gravity.
