Fixing the Aurora / Enfin “pre / post utility rate” Issue

If you are experiencing an error when attempting to generate a Enfin PPA within the Aurora platform you can do the following to circumvent the error.

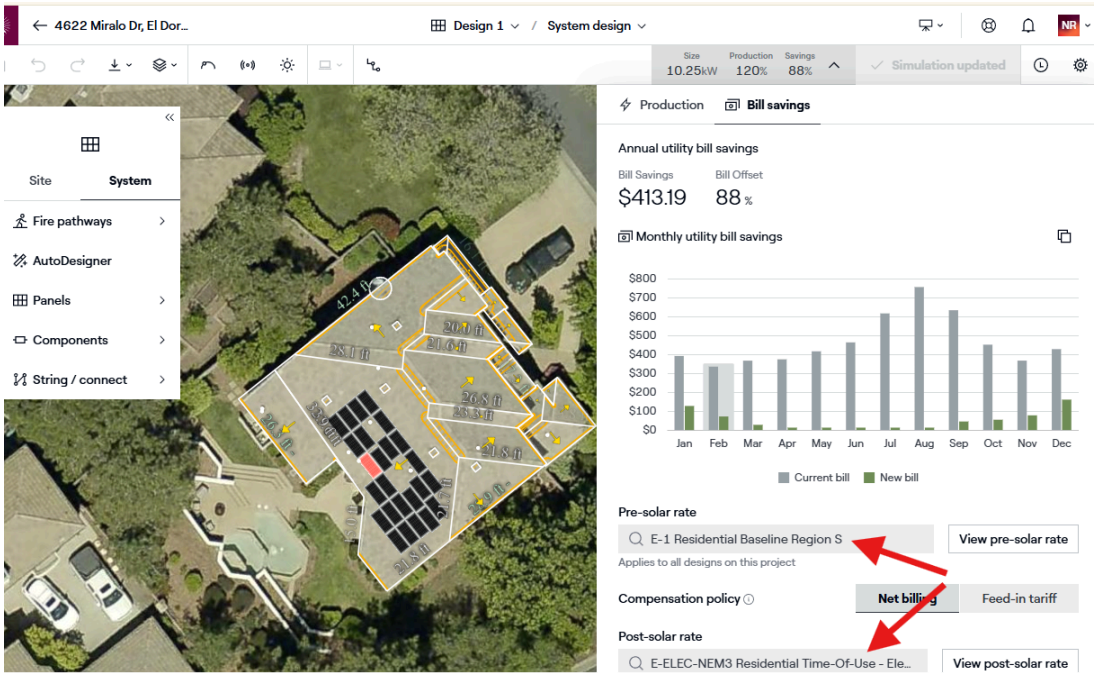

In the System design tab select the drop down showing detailed simulation results-

Toggle to BILL SAVINGS-

Then scroll down to Pre-Solar Rate and Post solar rate and make sure the correct utility provider and rate is selected-

Simulate the design to save and then return the pricing tab and select Enfin for your provider and choose the preferred escalator to generate price sheet selection.
