

Fixing the Aurora / Enfin “pre / post utility rate” Issue

If you are experiencing an error when attempting to generate a Enfin PPA within the Aurora platform you can do the following to circumvent the error.

In the System design tab select the drop down showing detailed simulation results-

Toggle to BILL SAVINGS-

Then scroll down to Pre-Solar Rate and Post solar rate and make sure the correct utility provider and rate is selected-

The screenshot displays a software interface for system design and bill savings analysis. On the left, a navigation menu includes 'Site' and 'System' tabs, with sub-items like 'Fire pathways', 'AutoDesigner', 'Panels', 'Components', and 'String / connect'. The main area shows an aerial view of a building with solar panels installed, with various panel sizes labeled (e.g., 47.4 ft, 30.0 ft, 28.0 ft, 26.8 ft, 21.8 ft, 20.0 ft). On the right, the 'Bill savings' section shows 'Annual utility bill savings' of \$413.19 (88% Bill Offset) and a 'Monthly utility bill savings' bar chart. Below the chart, the 'Pre-solar rate' is set to 'E-1 Residential Baseline Region S' and the 'Compensation policy' is 'Net billing'. The 'Post-solar rate' is set to 'E-ELEC-NEM3 Residential Time-Of-Use - Ele...'. Red arrows point to these rate selection fields.

Simulate the design to save and then return the pricing tab and select Enfin for your provider and choose the preferred escalator to generate price sheet selection.

The screenshot shows the 'Pricing' tab selected in the software interface. A 'Financing details' window is open, showing 'EnFin' selected as the provider and 'Select a specific product' as the preferred escalator. The window also displays a 3D rendering of a building with solar panels and the text 'No financing product selected'. Red circles highlight the 'Pricing' tab and the 'EnFin' and 'Select a specific product' dropdowns. Red arrows point from the 'Pricing' tab to the 'Financing details' window.
