ABSTRACT

One paragraph of a maximum of 250 words. The abstract should provide a comprehensive overview of the research. We strongly encourage authors to use the following structured abstract style, but without headings: (1) Background: Places the research question in a broad context and highlights the aims of the study; (2) Methods: briefly describes the main methods or treatments applied; (3) Results: summarizes the main findings of the article; (4) Conclusion: presents the main conclusions or interpretations. The abstract should be an objective representation of the article. It should not contain results that are not presented and demonstrated in the main text and should not exaggerate the main conclusions.

INTRODUCTION

The manuscript is written on A4 paper (21 cm x 29.7 cm), with a mirror margin of 1.5 cm at the top, 1.5 cm at the bottom, 1.5 cm at the left and 1.5 cm at the right. The title of a section is written in the Heading 1 style. The contents of the article are written in 11 pt Palatino Linotype font with 1 spacing and typed using MS Word using the Normal style. The article is written between 5-20 pages. The title of the manuscript describes the subject matter of the essay, written briefly and clearly, not more than 20 words with the Palatino Linotype font 16.

In compiling the introduction, the author explains the following: (1) General Problem/Brief introduction related to the research conducted. (2) Core problems that need to be resolved based on facts and/or hypotheses (if any). The problem must be objective (issued by reputable journals or reputable research institutions, not based on the author's opinion). (3) Description of the solution to solve the problem. Contains an explanation of how the problem will be solved along with supporting references. (4) State of the art - review of previous (similar) research to justify the novelty of this article (there must be references to journals from the last 5 years, international journals are better). (5) Objective - the purpose of the research. The introduction should be closed with the research objective which will then be answered in the conclusion. Make sure the introduction of the manuscript contains the five points that have been

mentioned. Furthermore, the author needs to pay attention to how the writing style matches the template, paragraph style, spacing, type and size of font, use of titles and subtitles, images, and tables.

RESEARCH METHODS

The research method is written descriptively and must provide a statement regarding the methodology used in the research. This method should provide the reader with an overview of the things done in the research. This section contains data sources, research variables, sampling techniques, data collection methods, and data analysis methods. The data analysis method used must be described in detail.

RESULTS AND DISCUSSION

This section is the most important part of your article. The analysis or results of the study should be clear and concise. The results should summarize (scientifically) the findings rather than providing data in great detail. Please highlight the differences between your results or findings and previous publications by other researchers. The discussion should be compared with related references.

Mathematical Equations

Mathematical equations should be numbered consecutively and start with (1) until the end of the article. This numbering should begin and end with an opening and closing parenthesis and be right-aligned. Insert equation to write mathematical equations in math style.

$$y_i = \beta_1 x_{i1} + \dots + \beta_p x_{ip} + \varepsilon_i = x_i' \beta + \varepsilon_i, \quad i = 1, \dots, n \quad (1)$$

All variable writing is written in italics, for example, X_1, \dots, X_n . $Y_i, i = 1, \dots, n$. Commas separate decimal numbers", " and if more than one uses a semicolon, ";", as a separator. For example (0,123; 213,136; 1362,531).

Figures and Tables

Tables are displayed clearly (not as images) with the title above the table. The source of the table can be listed at the bottom of the table aligned to the left with a font size of 11pt. Table numbering starts from number 1 and so on.

Table 1. Table Title 1		
Column title 1	Column title 2	etc.
Fill in column 1

etc.		

Images are displayed clearly and proportionally. Images/Photos that contain copyright must include the source. Images that have been published must be referenced. The title is placed at the bottom of the image. Image numbering starts from number 1 and so on.

Figure 1. Title of Figure 1

CONCLUSION

This section contains a brief and precise statement of the research results and/or open problems. Written in essay form and not numbered.

ACKNOWLEDGMENT

Include acknowledgments here (if any), especially those who helped fund your research. Include individuals who have helped you with your research: Advisors, Financial supporters, or perhaps other supporters.

CITATION

Primary references are Books, Journal Articles, and Proceedings. All references should be the most relevant and current sources (preferably within the last 5 years). References are written in IEEE Style. Please use a consistent format for references - see examples below:

- Journal articles [1],
- Proceedings [2],
- Theses [3].
- Books [4]
- Websites [5]

We recommend preparing references with a bibliographic software package, such as Mendeley, EndNote, ReferenceManager, or Zotero to avoid typos and duplicate references. Include digital object identifiers (DOIs) for all references if available.
