Computer Accessibility for the Visually Impaired:

Last Updated June 8th, 2025.

Created by Elijah Leightcap, Vision Rehabilitation Therapist, Bureau of Blindness and Visual Services, Philadelphia, vrtinfo.com

Computer Accessibility for the Visually Impaired:

- Accessibility features that make it easier to see details on the screen.
- Voice commands.
- Voice typing.
- Large print and tactile keyboard adaptations.
- Large print and braille external keyboards.
- Trackball mice.
- Magnification software.
- Screen reader software.

Free Accessibility Features and Paid Software:

It is recommended to try the default free accessibility features found in settings before considering the paid computer accessibility software.

Before purchasing any paid computer accessibility software, try the software first using free versions if they are available. ZoomText and JAWS offer free 40 minute versions.

My Recommendation for a Magnification Software for Windows is ZoomText:
