SCM MPhil MMHD

Module 1: Data analysis in Python
Module 2: Core statistics

Delivery: Michaelmas

Introduce yourself

Please write a couple sentences here to introduce yourself to the tutors, tell us a bit about your background and what your MPhil is in. Additionally, if you could write a single sentence on your background knowledge and expectations for the training, that would really help us tailor the contents to the requirements of the cohort.

My name is Ruiyi Yang, and I am studying for the MPhil in Molecular Mechanisms of Human Disease at Cambridge. I graduated from the University of Bristol in Cancer Biology & Immunology, where my final-year research investigated how cancer-associated fibroblasts suppress cytotoxic T-cell function. My background is mainly in experimental cell biology and immunology, and I hope to strengthen my Python and statistics skills to analyse biological data, particularly from live-cell imaging and functional assays.
