Importing old .clock files:

Frequently Asked Questions

Step 1: Install Watch App

In order to sync faces you must have the watch app installed and to view full screen faces you must have the app open on your watch:

How do I keep Clockology open? Keep Active (Clockology 4.0.6)

- **Keep Active Mode:** Keeps your Clockology watch face open and active on your Apple Watch instead of automatically returning to the native Apple Watch face.
    - *How to exit:* Press and hold on the bottom of the screen (or press the Digital Crown twice within 3 seconds, depending on configuration).
    - *Settings:* Can be toggled on or off anytime within Clockology Settings (enabled by default).
- Keep Active is available under face settings. Long press your watch face and click the gear and scroll down to reveal the keep active switch.

~~You can keep your app open by using the following setting: ***Set wake to after 1 hour under the watch app, general, return to clock. Scroll down to Clockology, verify it is set to default. Remember if you don't use your watch during the 1 hour your face will revert to stock but with a complication you're just 1 tap and back.***~~

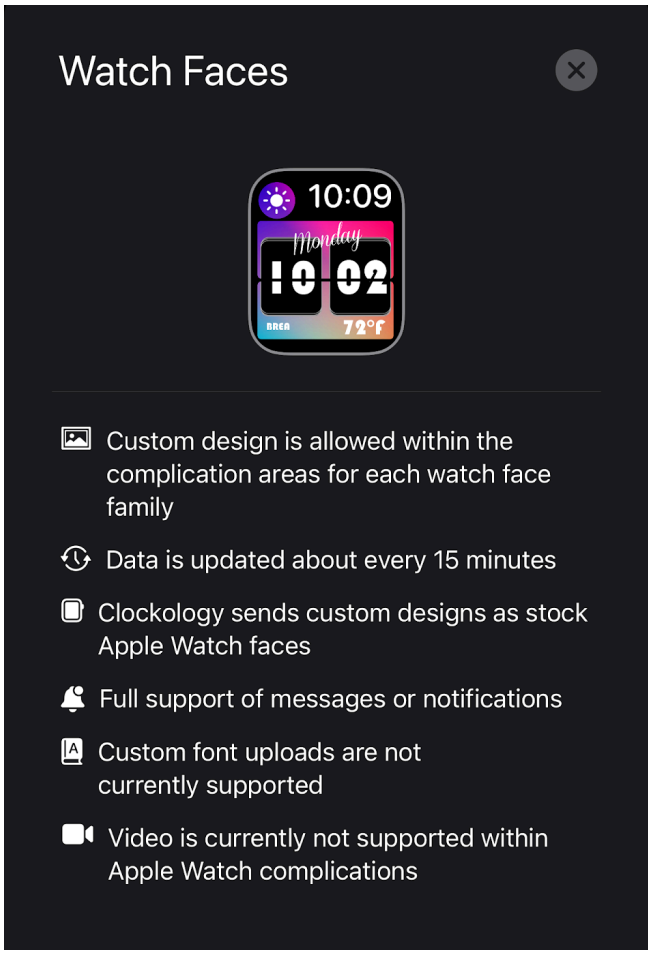

~~Interaction with the watch such as pressing the crown, covering face or not checking time within an hour will cause the face to return to default.. A double press of crown will revert to Clockology as well as placing a Clockology complication on the stock face. Use the in app filter to select a fully native complication face that will allow you to return to full screen by touching anywhere on the face.~~

~~Keep in mind that this is only an app and all Apple Watch apps have run time limits. Follow the easy instructions above and if you raise your wrist or press the watch face, while Clockology is running, at least once an hour (which most people do subconsciously) the app will show up on your watch when you activate the screen.~~

Always on video tweak

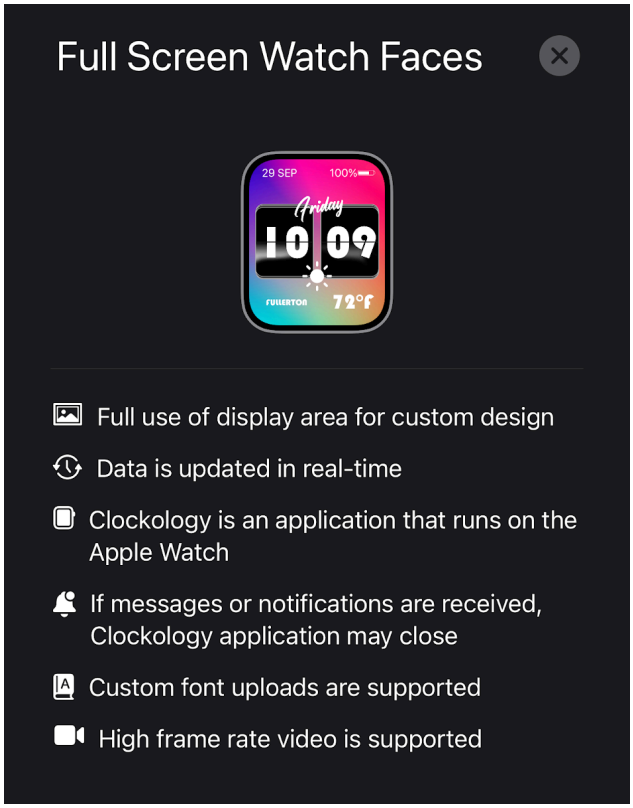

Any face that contains a video will remain active on wrist up. This will cause higher battery drain if you wrist up often. This also helps to keep full screen faces active. Default apple faces and Clockology will ordinarily pause second hand movement after several seconds. This is normal behavior.

What are the different types of Watch Faces and Widgets?

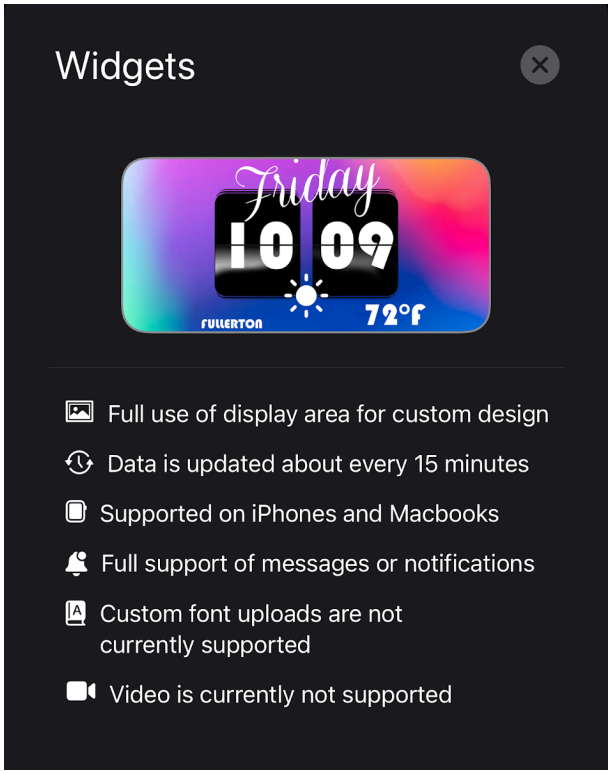

Complication Faces (Native/.face file type):

• Custom design is allowed within the complication areas for each watch face family
• Data is updated about every 15 minutes
• Video is currently not supported within
Apple Watch complications
• Clockology sends custom designs as stock
Apple Watch faces
• Full support of messages or notifications

Full Screen Faces (Clock2 file type):

• Full screen use of display for custom design
• Data is updated in real-time
• High frame rate video is supported
• Clockology is an application that runs on the Apple Watch
• If messages or notifications are received, Clockology application may close

Widgets (Widget file type)

- Supported on iPhones and Macbooks
- Full use of display area for custom design
- Data is updated about every 15 minutes
- Video is currently not supported
- Full support of messages or notifications
- Custom font uploads are not currently supported

Can I convert a Full Screen clock to a native face or widget?

Yes! See the following guides:

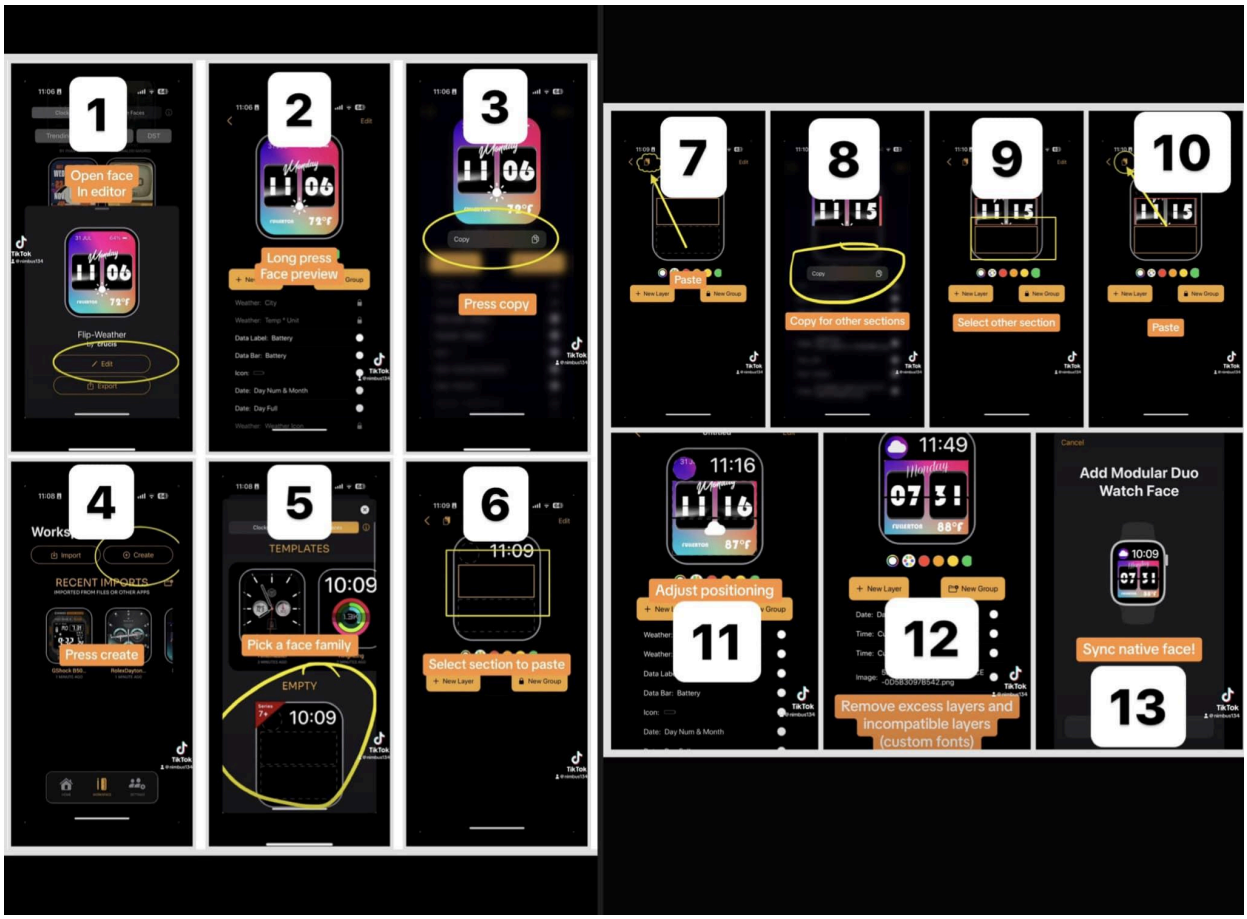

Clock2 to Face/Widget

Quick tutorial showing how to port your clock2 file to a face file (native watch face which never closes) or widget: https://www.tiktok.com/t/ZP8raQsN8

Clock to face or widget
1. Open face in studio
2. Long press Face preview
3. Press copy then go back
4. Press create, Select Watch faces tab
5. Pick a face family
6. Select section to paste
7. Paste
8. Copy for other sections
9. Select other section
10. Paste
11. Adjust positioning
12. Remove excess layers and incompatible layers (custom fonts)
13. Sync native face!

Copy, paste and Group Move Video tutorial: https://www.tiktok.com/t/ZP8raSGWR/

Group move allows you to move entire groups at once to quickly port clocks to face/widget.

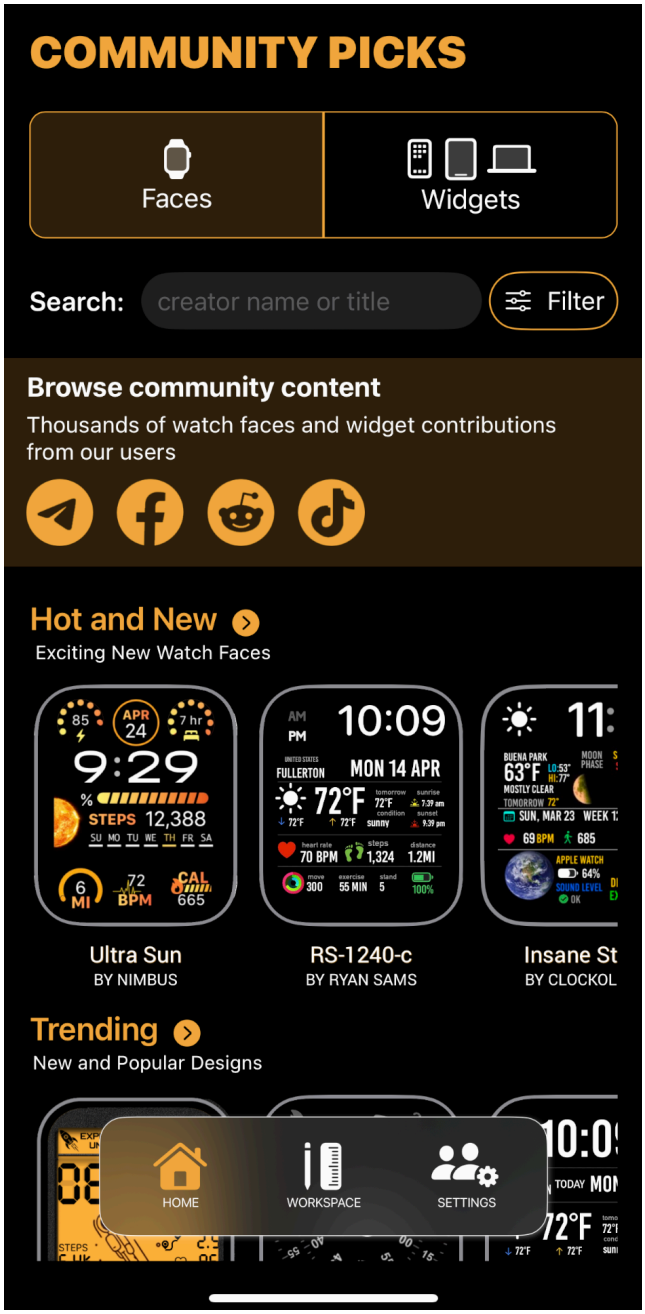

What if I don’t see a sync button?

To sync full screen faces you need to run enable beta (see attached graphic):
http://www.mediafire.com/file/s3cgffxws7fbgn8/_EnableBeta.clock/file
Step 1. Open Clockology on your watch
Step 2. Open enable beta file on your phone
Step 3. You should feel a vibration on your watch and see the Watch settings menu, then you can swipe down the beta message
Step 4. Tap Got it, you should see the iconic watch face

Faces/Widgets Tabs: Faces will work on your Apple Watch, Widgets will work on your iOS or MacOS devices home screen

Browse Community Content (Social Icons): Tap any icon to open the appropriate social page to browse tons of free shared content (telegram, facebook, reddit and titkok)

Filter: Filter exactly what you'd like to see: (All, Full Screen Faces, Complication Watch Faces, Free, Plus+ Required)

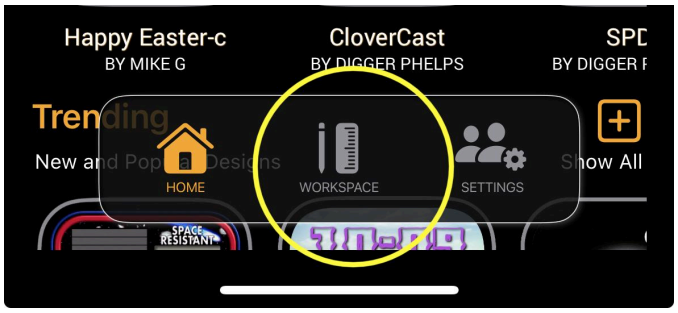

Search field: search in app faces using the search field

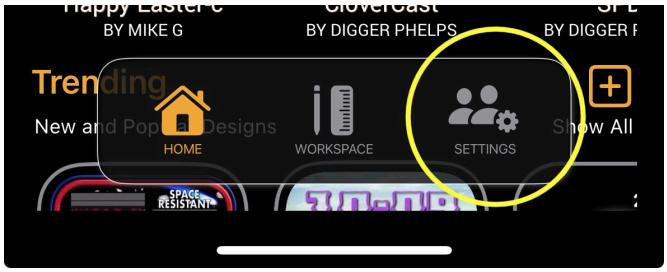

Plus+ Required Faces Indicator:

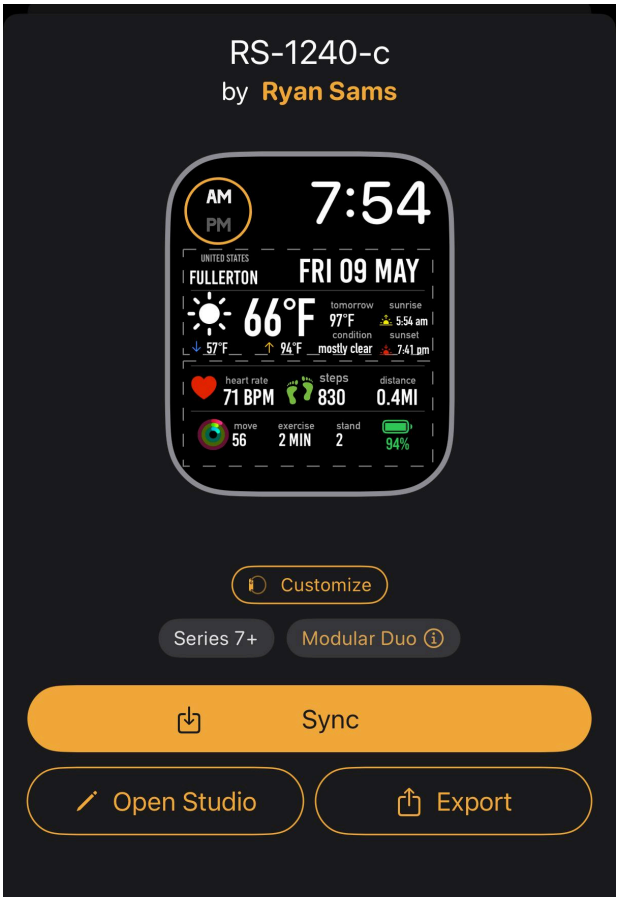

Workspace: Import/Create a new clock2/face file, create new face files (under the watch faces tab), View Recent Imports, Edit clock2/face

Settings: Manage Membership, Sync Membership to Watch, FAQ, Manage Permissions, Show Wheelchair Pushes instead of Steps and Use Cloud Sync

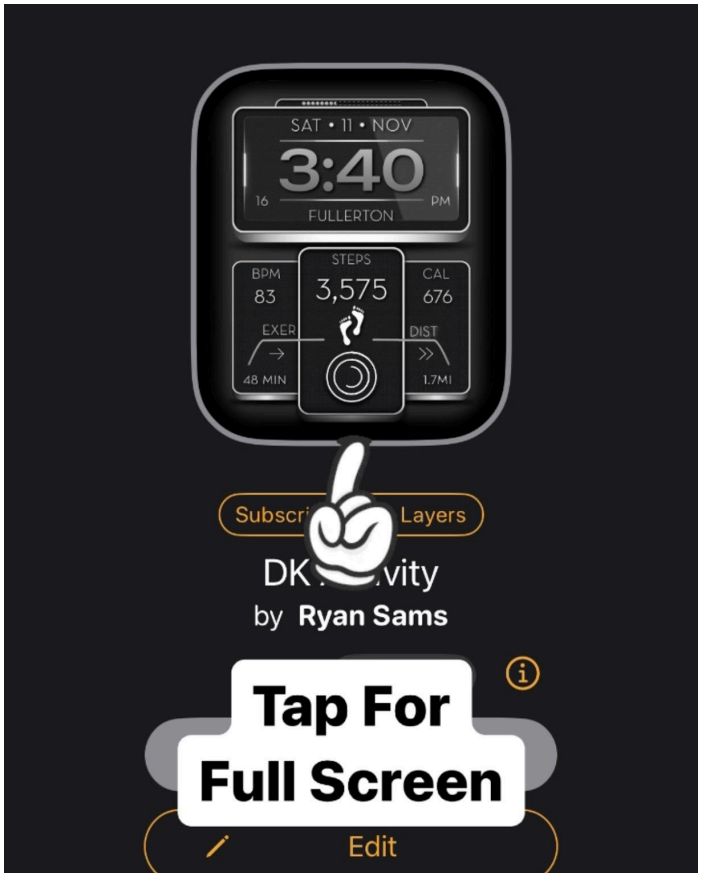

Quick Look (sync screen)

When you open a clock2/face/widget file you'll be presented with the Quick Look screen. You can sync from here, open studio (edit), or export. Export has 3 options: Image only, clock2 and image, clock2 only.

This also shows the creator information from the file if available. Tap the name to see links to the creator's social media pages. (use the Creator profile tab to populate this area, This feature requires Clockology+)

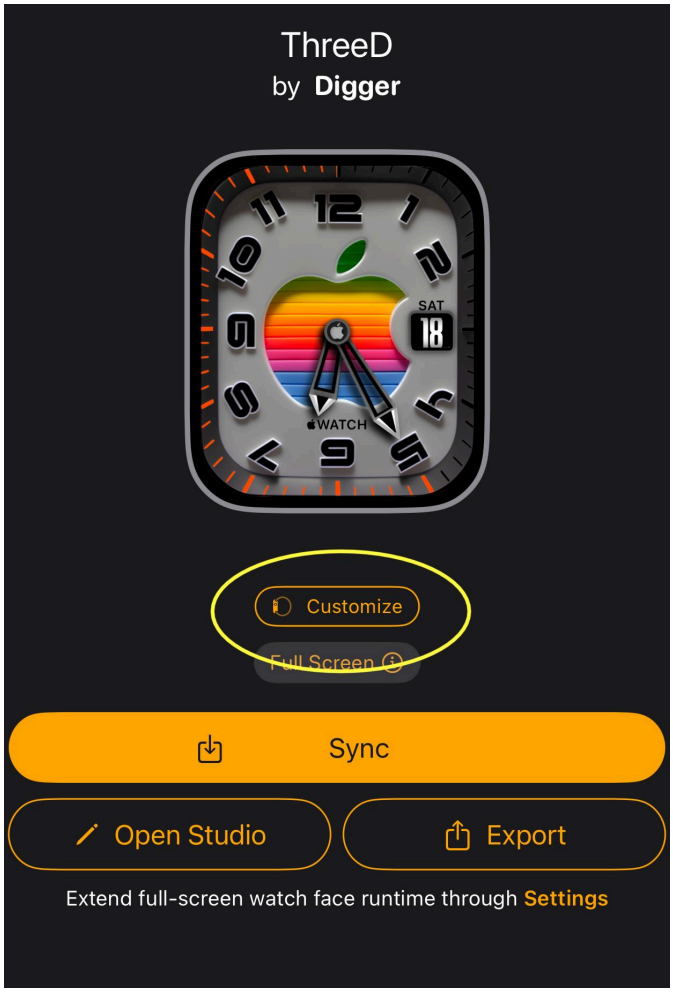

Tap the middle clock image to view full screen mode:

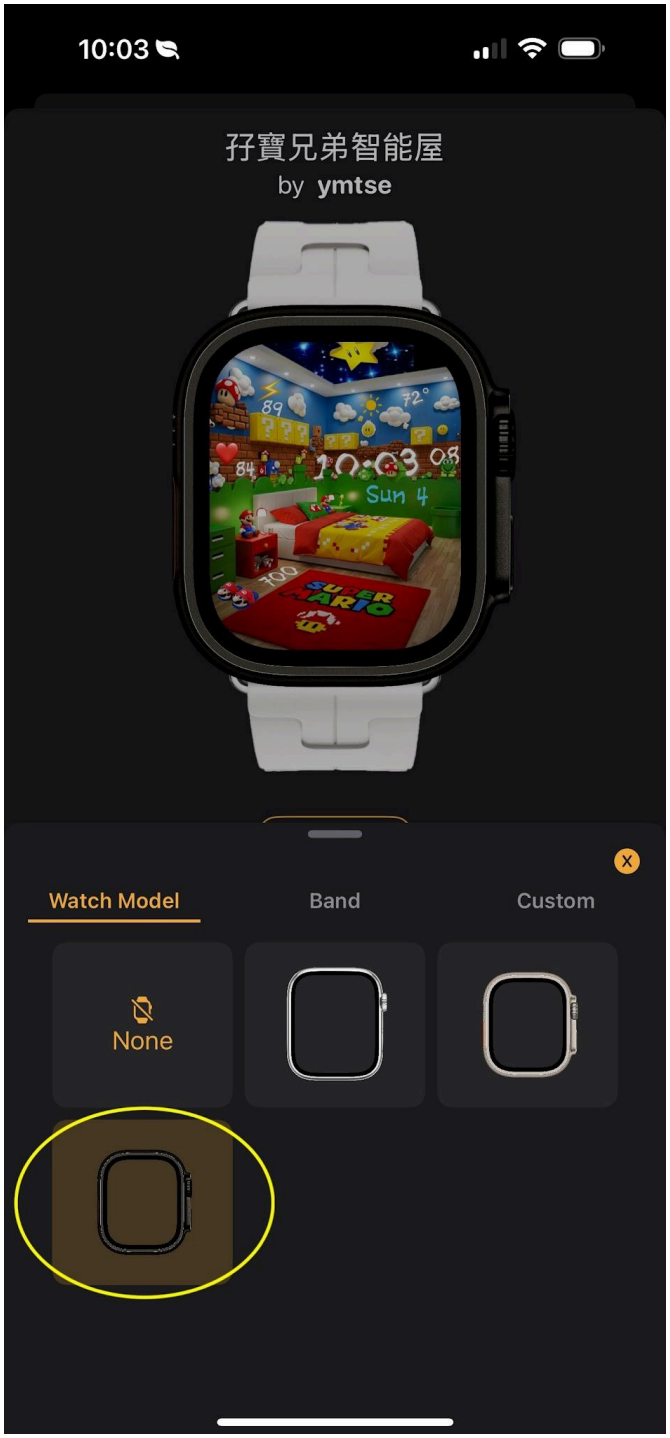

Swipe down to dismiss the full screen clock.

Customize

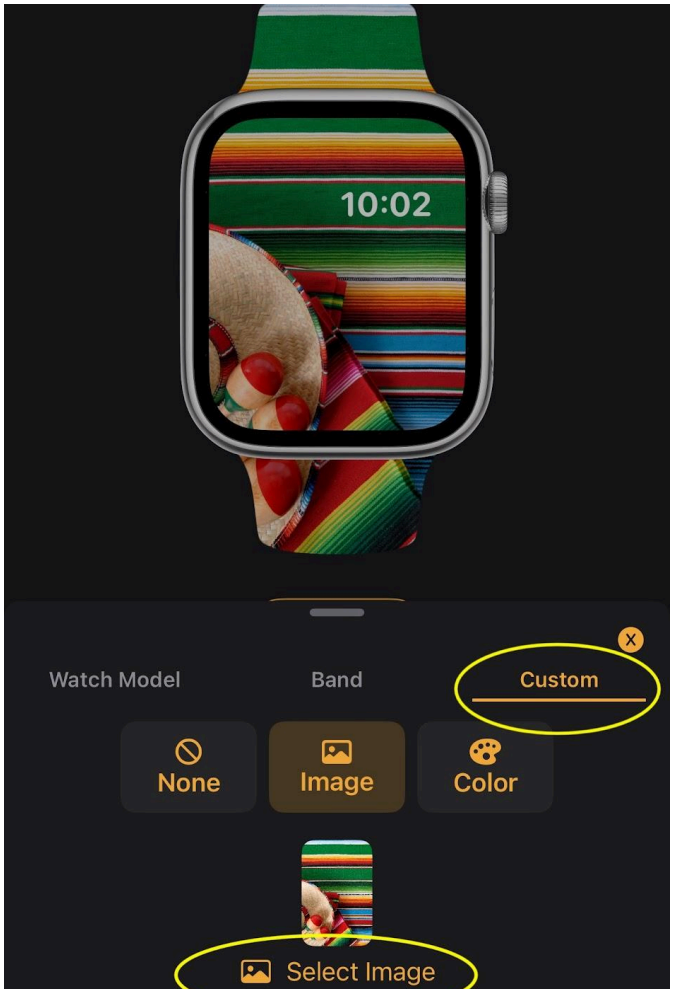

You can see a preview of your face with a custom band/watch.

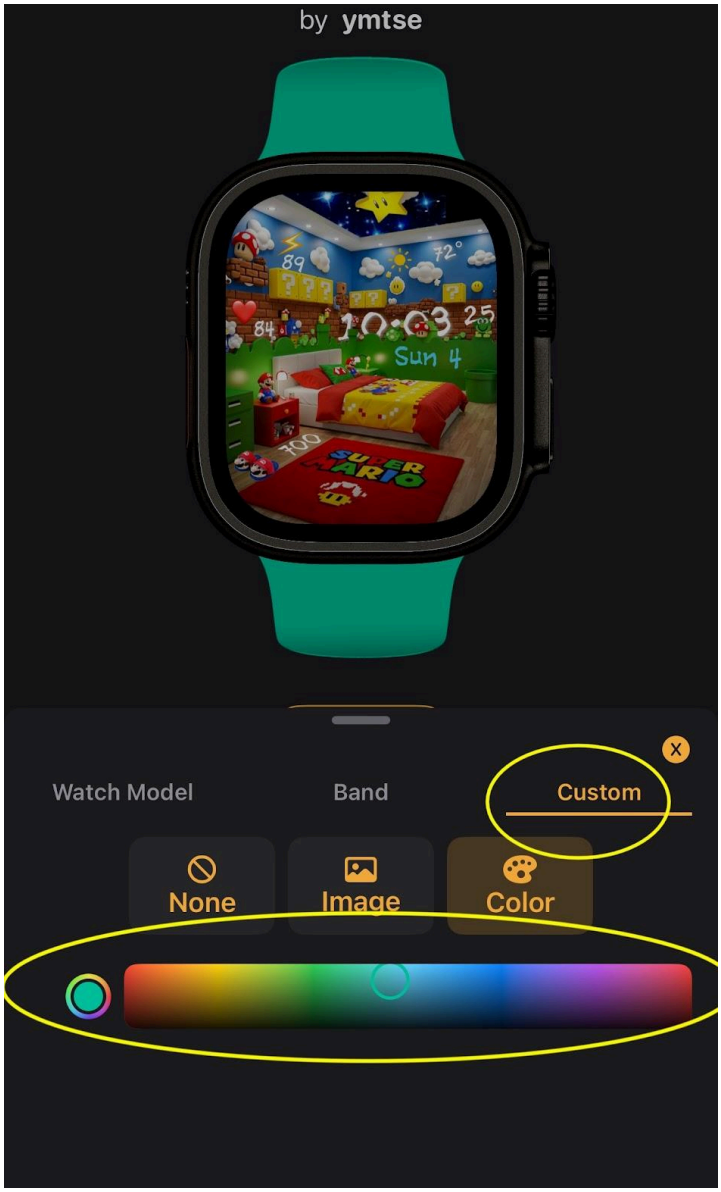

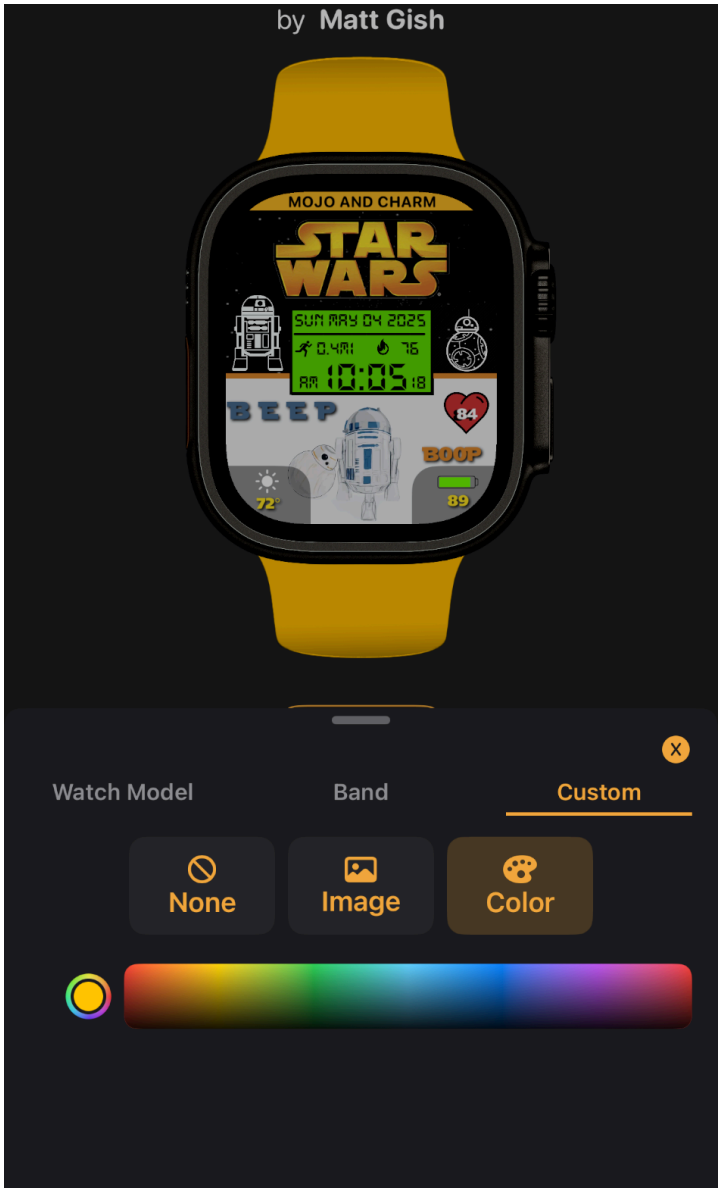

Select Series or Ultra frames and pick from many different band types or pick a custom color or image to overlay on your band:

Full Screen Watch Face Settings (Share, Settings, Tint)

Long Press your watch face to bring up these options

Bottom icons

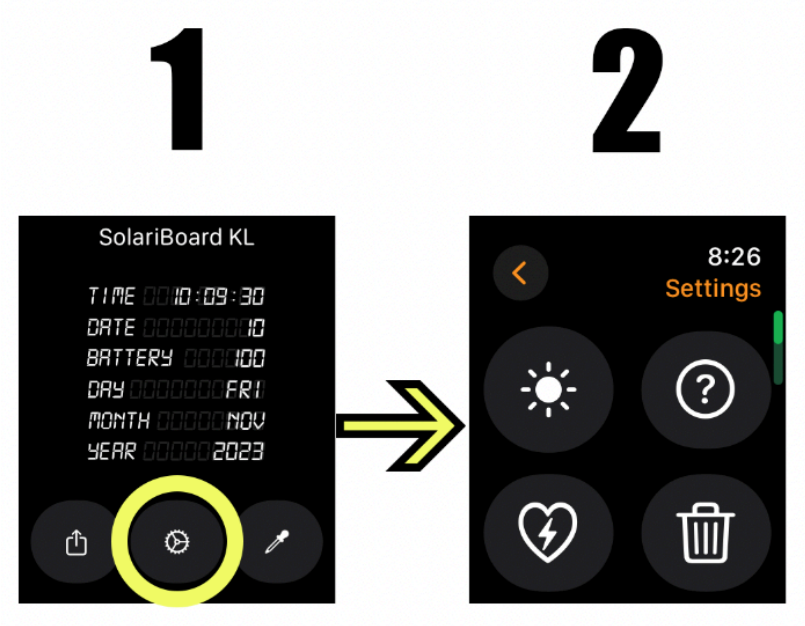

Share menu

Share your face using text or mail

Settings

View weather, adjust health goals, view tips, delete face, enable swipe navigation, view build number

Heart: Configure health goals to display on bars/rings/data layers

Trash can: Delete current clock. Delete is only visible if 2 or more clocks have been synced.

Health goals for Steps, Flights and distance

Swipe Navigation: Enable this to swipe across your screen to switch faces.

Build number: Displays the apps current build number.

Volume: Adjust volume level (using digital crown),
Any open music app will have to be closed to adjust volume levels. The screen should not display any audio playing. See example image:

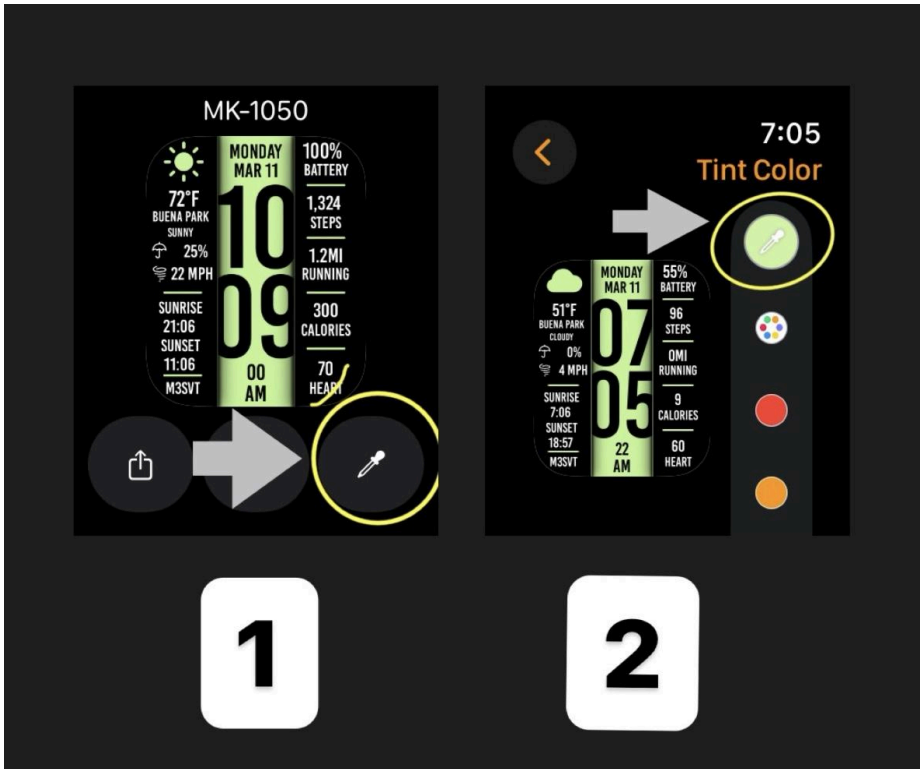

Tint options:

Brightness: Scroll the digital crown up/down to adjust the brightness.

Select from predefined colors on the right, pick a custom color using custom (top circle)

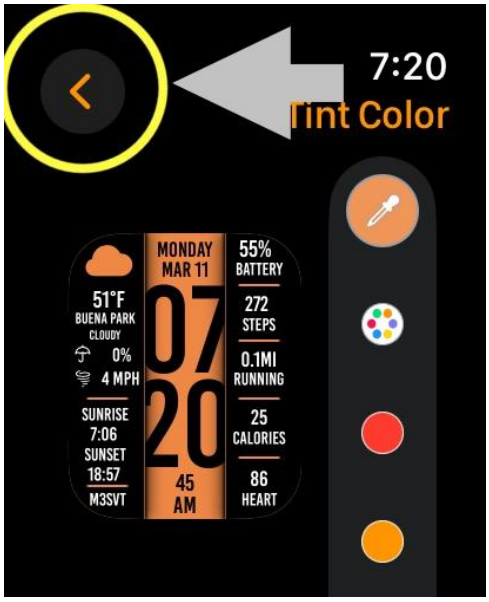

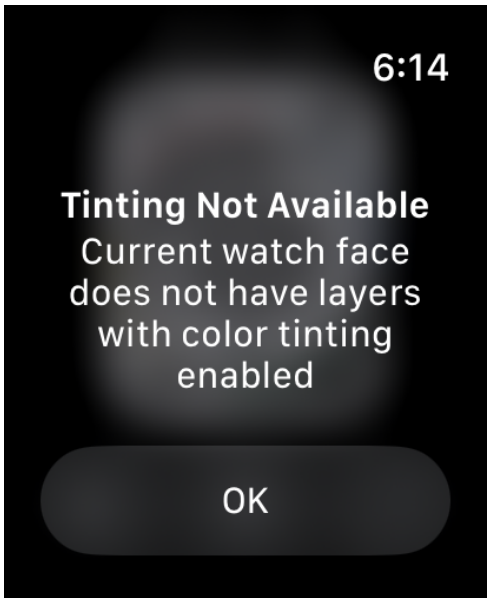

Once you have selected your color press the check mark.

1. Adjust tint
2. Custom tint selection

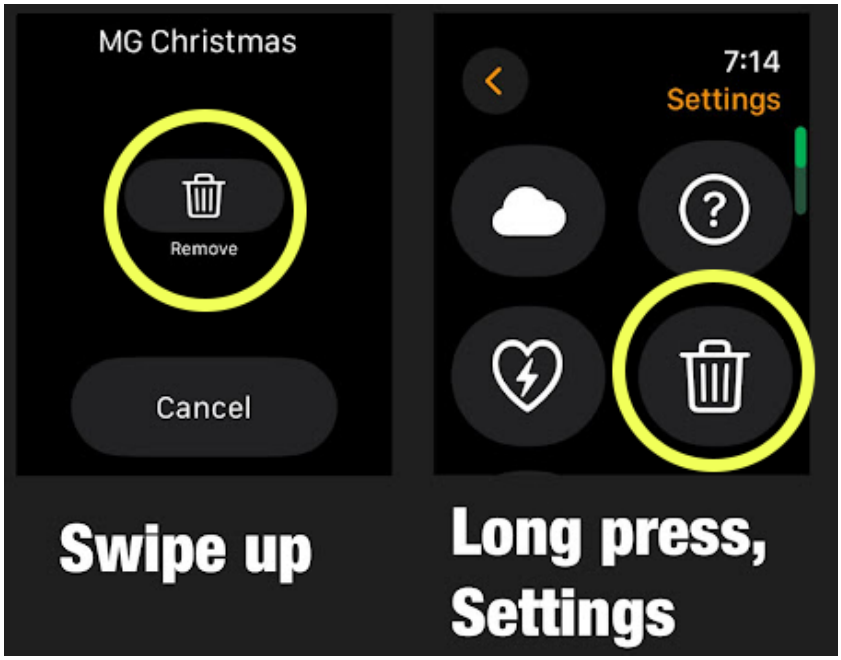

Select Back to face after choosing your tint color:

When tint is not available (if you have tint on it may also impact faces that do not have tinting enabled, in this situation you need to switch to a face with tint and select multi-color):

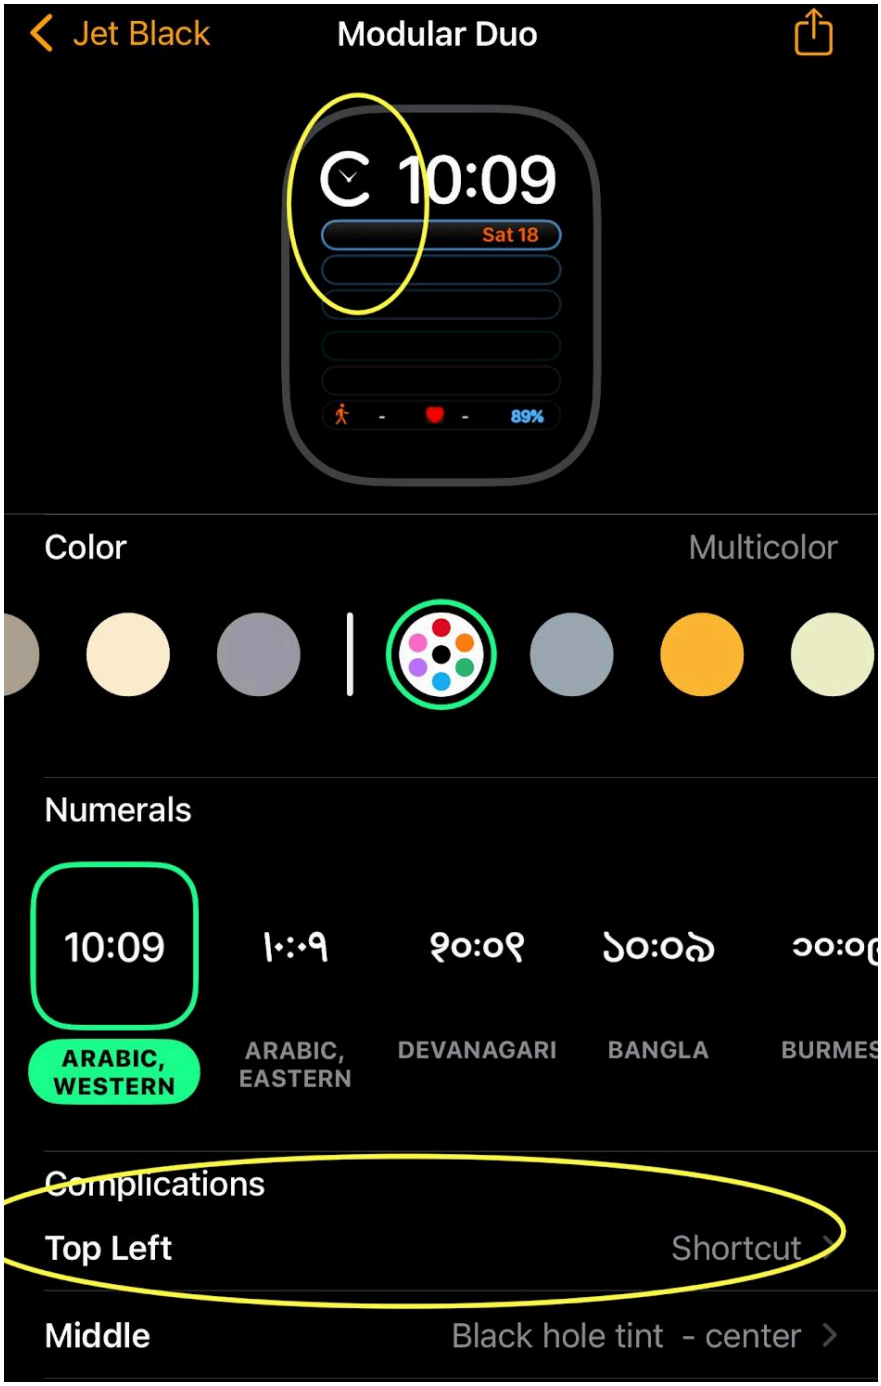

Delete Faces Synced to Watch

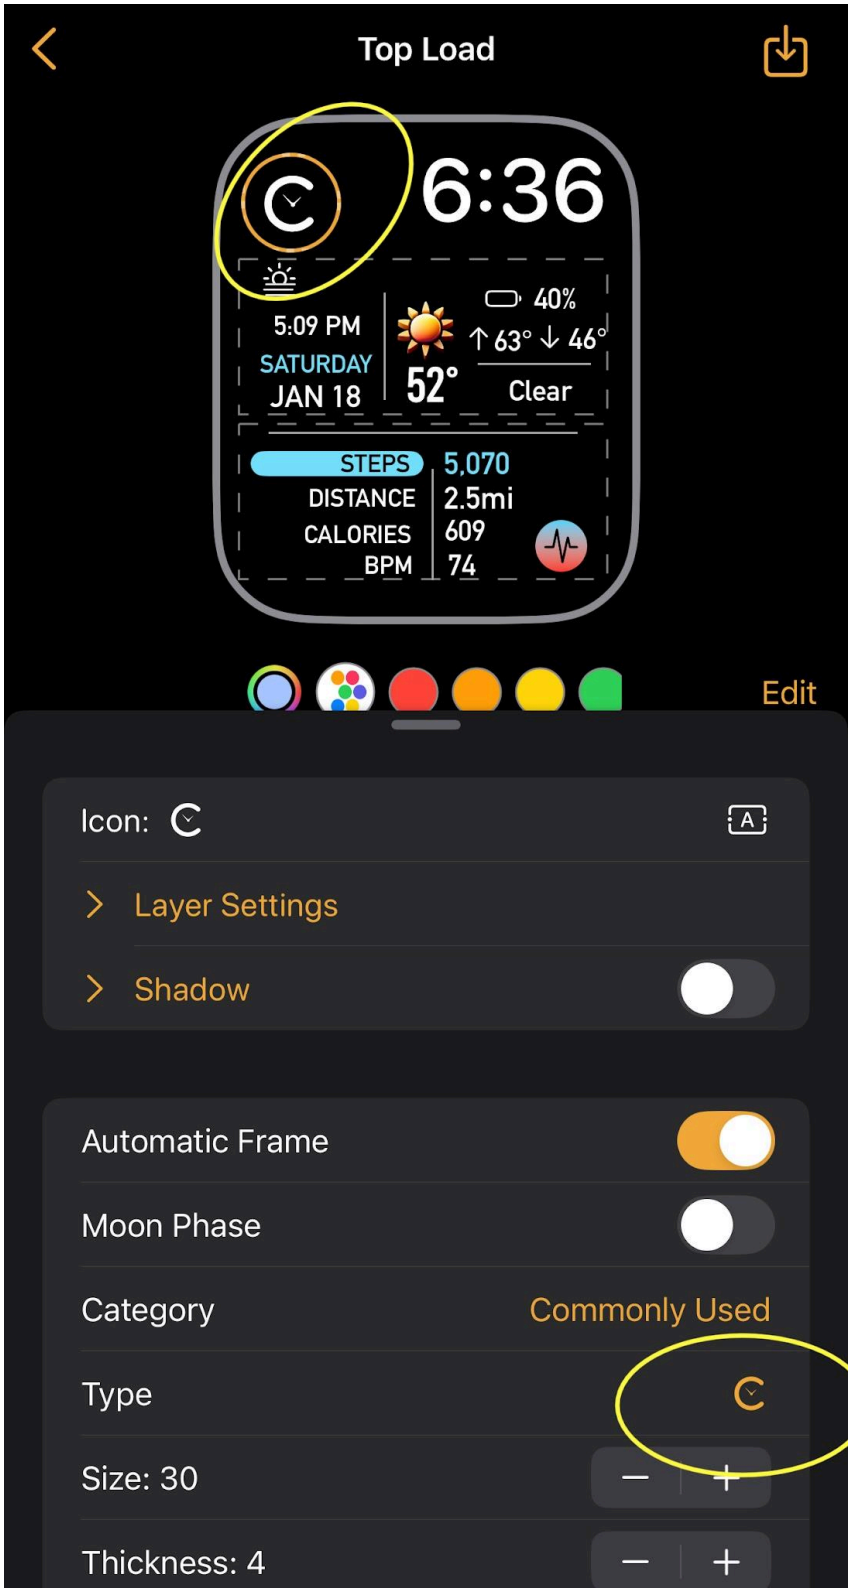

To delete synced faces from the watch directly: Long press the face then swipe up and select remove or long press, tap settings, tap trash can. Delete is not available if you only have 1 face synced. To remove 1 face you have to reinstall the watch app.

Complication Shortcut

Any watch face will create a complication now or use Shortcut Clockology complication as a default. There is also a new clockology icon listed in icons.

Select the pencil to modify the group name/color.

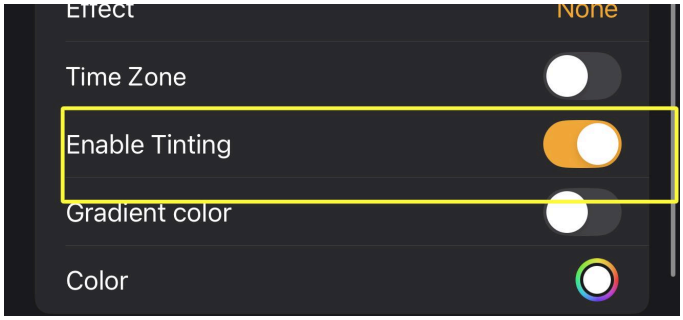

Tap group name field or color selector to modify.

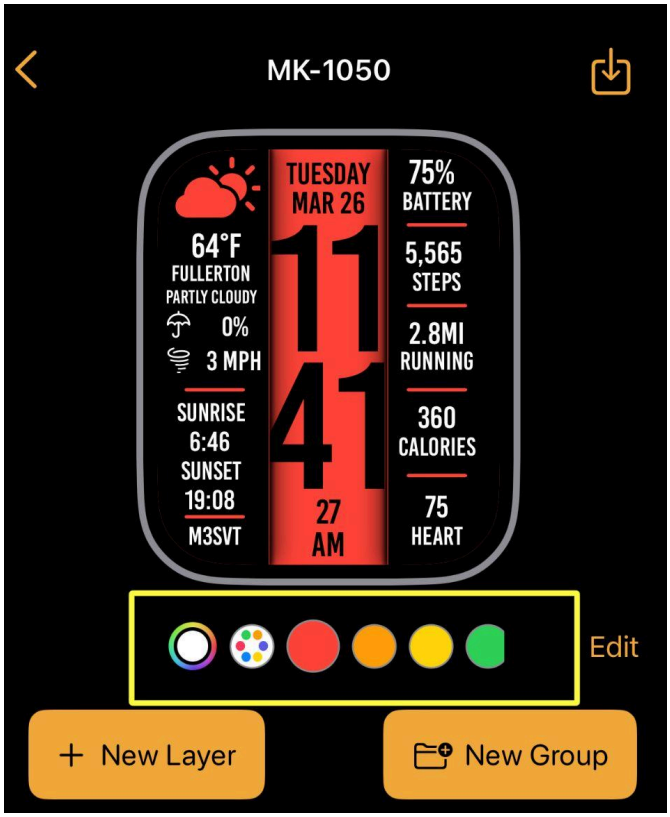

Using groups you can modify font, size, and color of multiple layers at once.

Tinting

For each layer, a new setting to allow for a color override for that layer can be set when the design is previewed or in fullscreen mode. On the watch you can select a color and even use the new color picker to pick any color.

- **Enable Tinting** on any layer you would like to be able to change the color. As with tinting other layers the lighter the color the better the results.

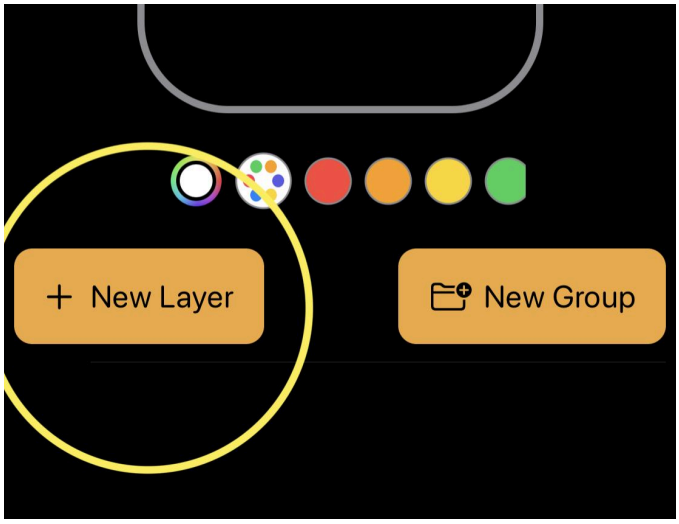

Use the buttons below the preview in the studio to see how your design will look tinted with different colors. When you select a color here this will be the default synced for the selected face. The far left custom color selector is the only exemption. This is only for a preview in the studio.

Duplicate to new design

In order to sync multiple copies of the same clock to your watch you'll need to copy/paste to a new clock or use *duplicate to new design*. Long press your face in the studio to bring up this option.

Layer Options for new Clocks

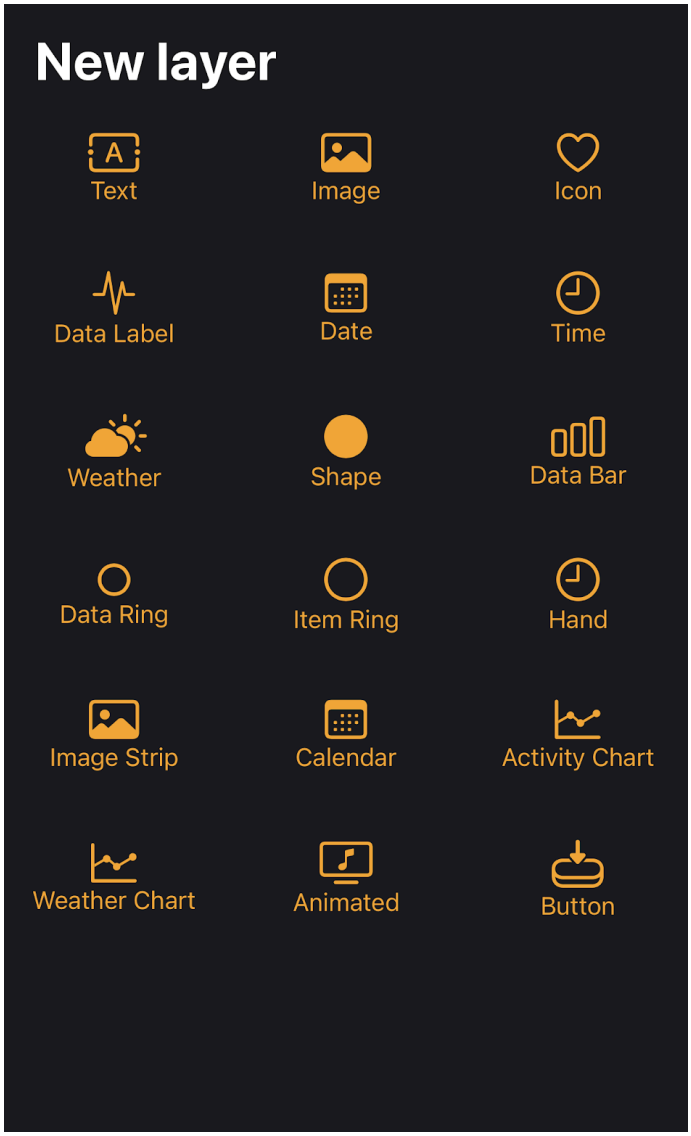

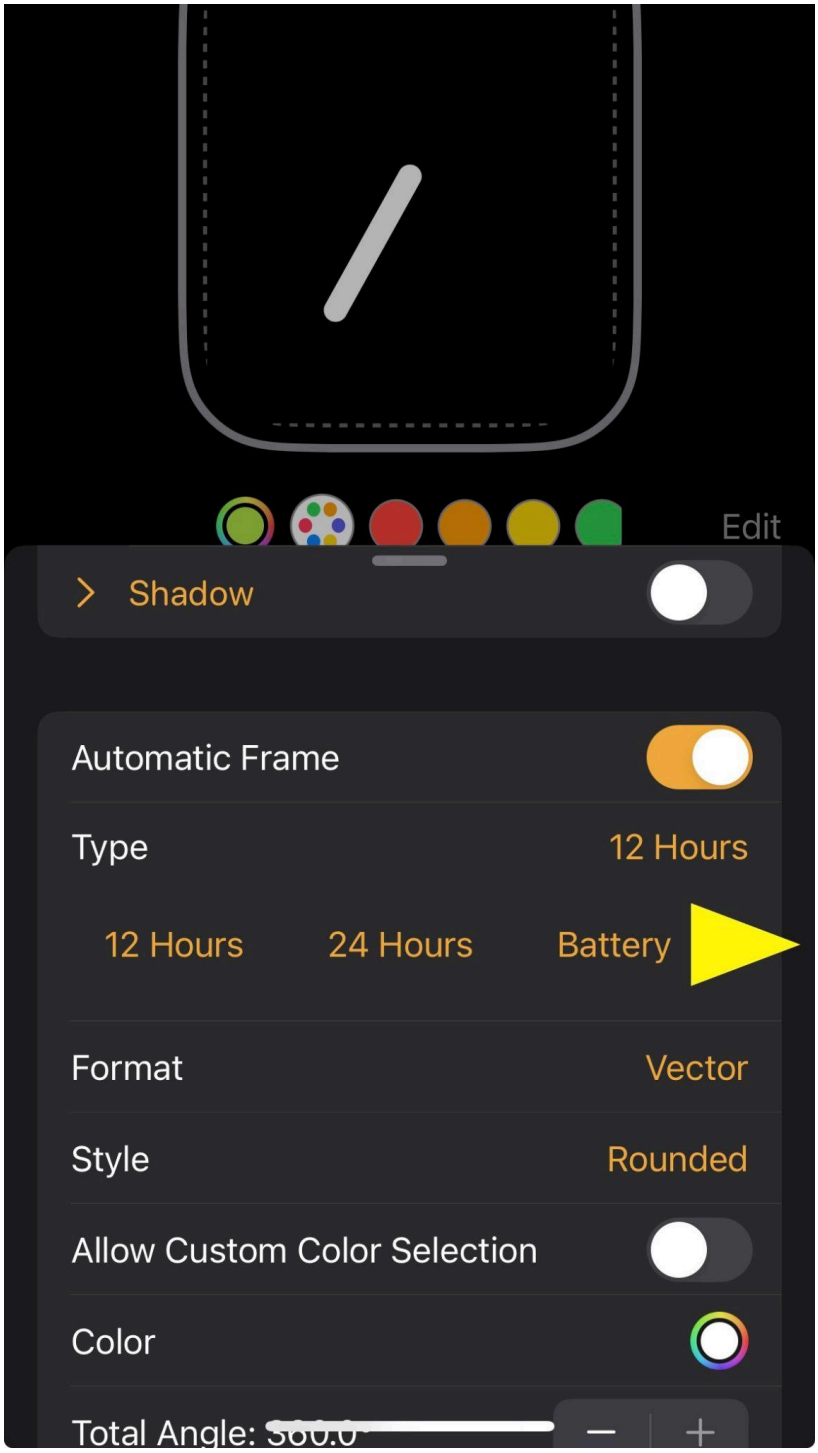

Image Strips

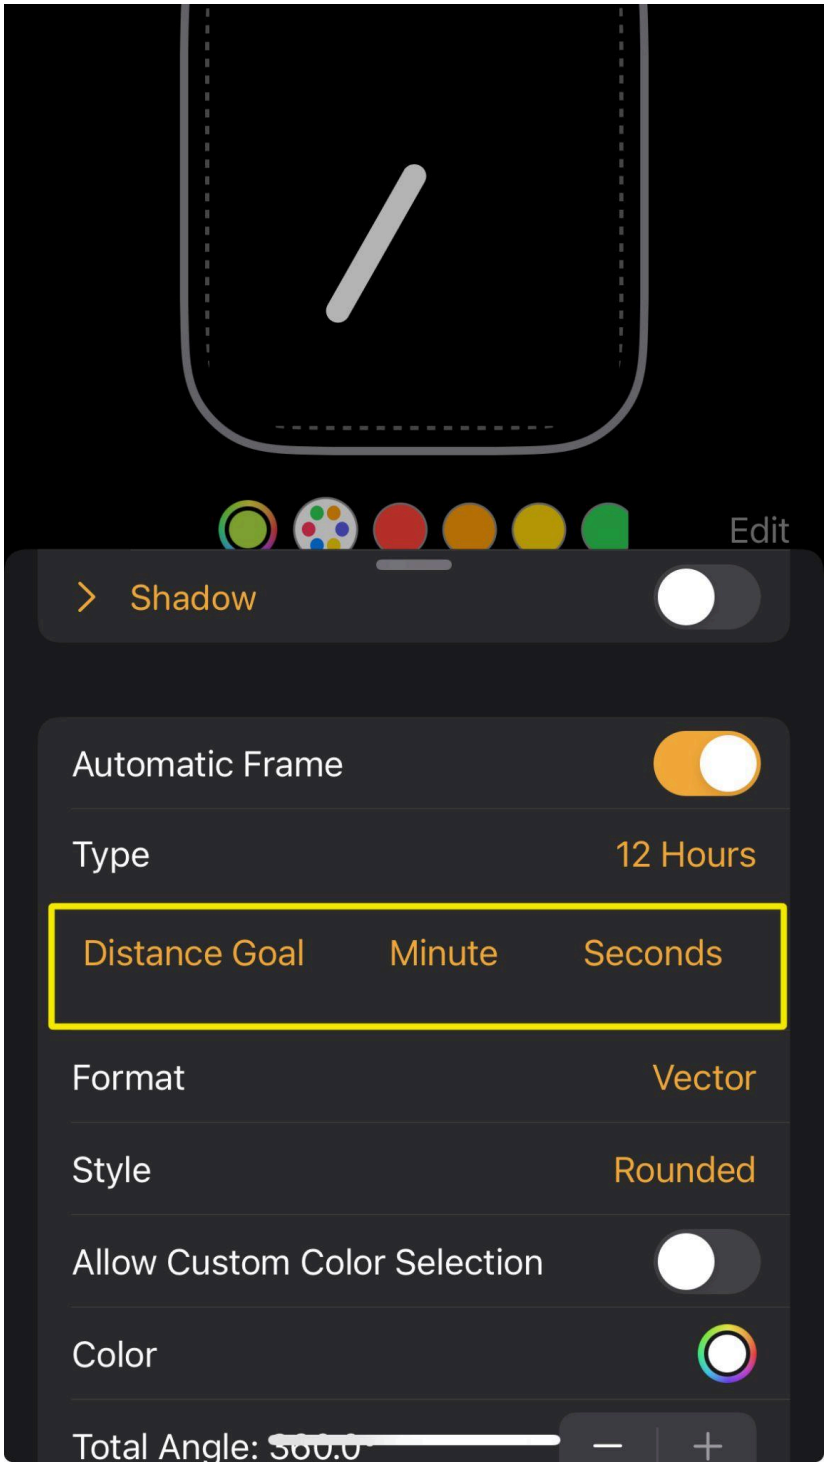

Please visit our webpage for more information about various image strips and free examples: https://clockologyapp.com/image-strips/

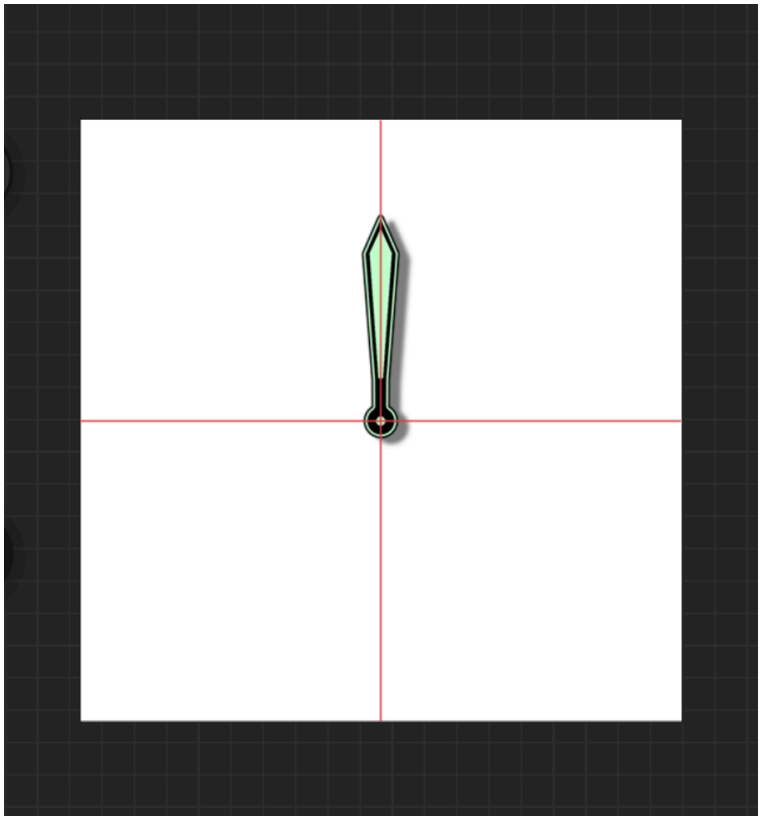

Hand Options

Available Options: 12 Hours, 24 Hours, Battery, Steps Goal, Distance Goal, Minute, Seconds

Resizing Image and Automatic Frame

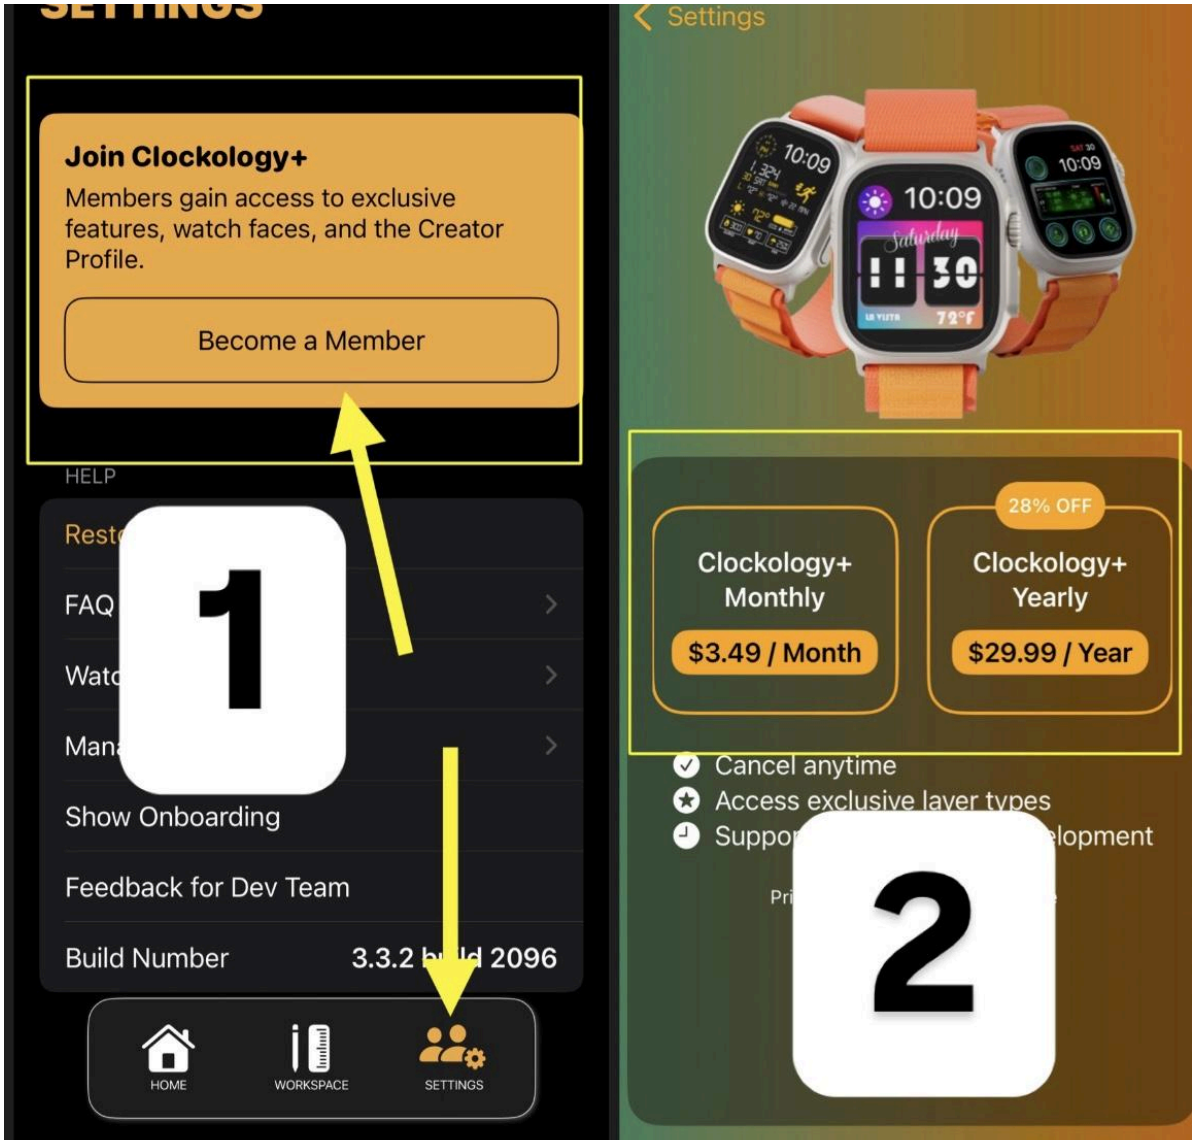

We need to use a combination of automatic frame, width, height and *aspect ratio* to resize images.

Settings Tab

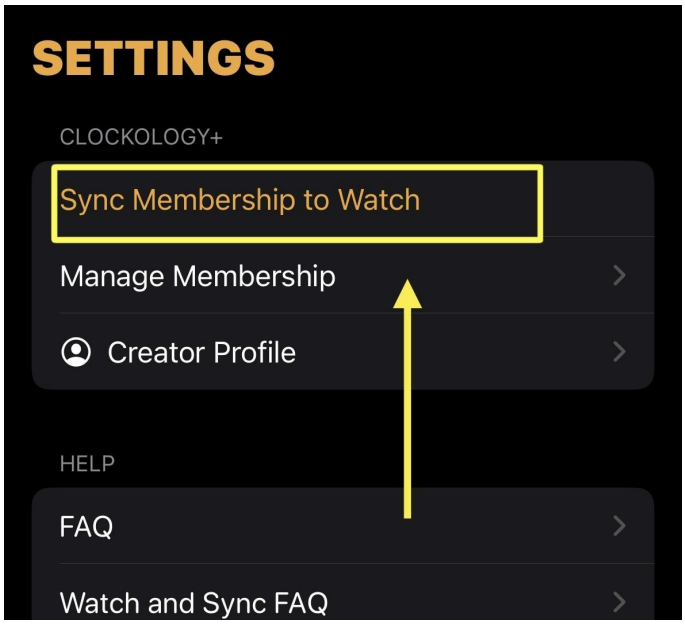

Become a Member: (Subscribe to gain access to exclusive features)

Benefits of membership:

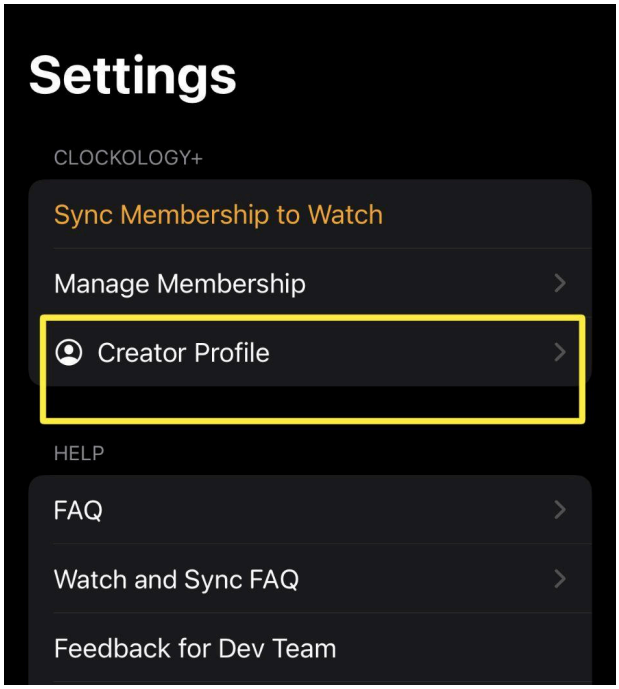

- (Live Weather). We have upgraded the capacity of our weather servers to allow for millions of API calls so that your live weather data always loads, all the time.
- Image Strip which supports day of the week, month, month of year, AM/PM, 12/24 hour, weather, sunrise/sunset, battery, moon phase
- Group creation and manipulation
- International Translation Support.
- Your creations will automatically be tagged with your name and social media information.

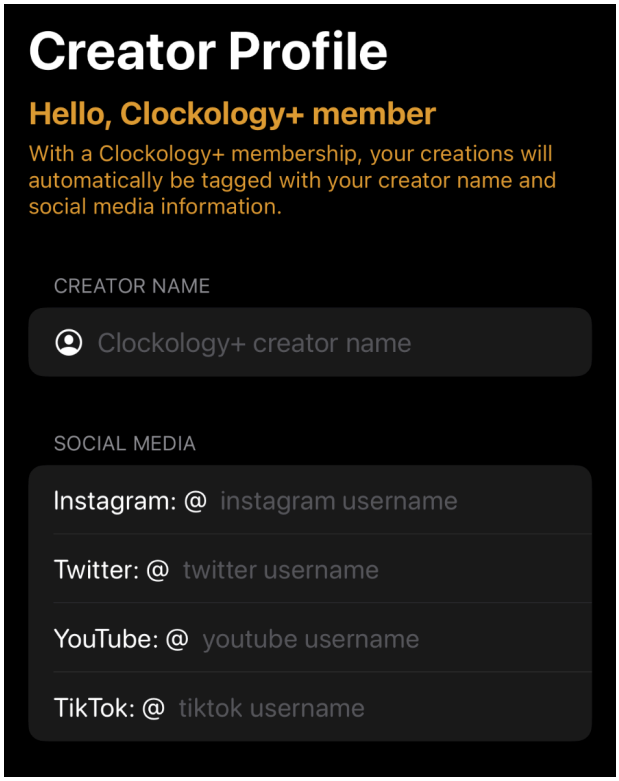

Sync Membership to Watch

If weather and/or image strips are not appearing on your watch use Sync Membership to Watch.

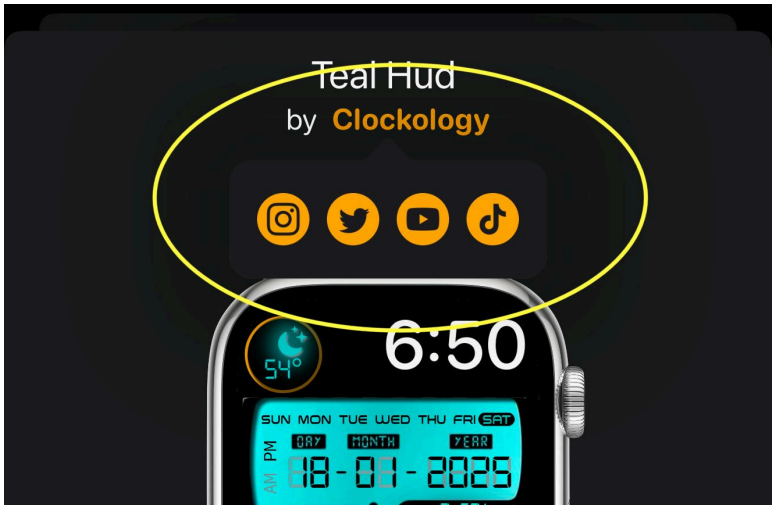

Creator Profile: (input your username/social media info)

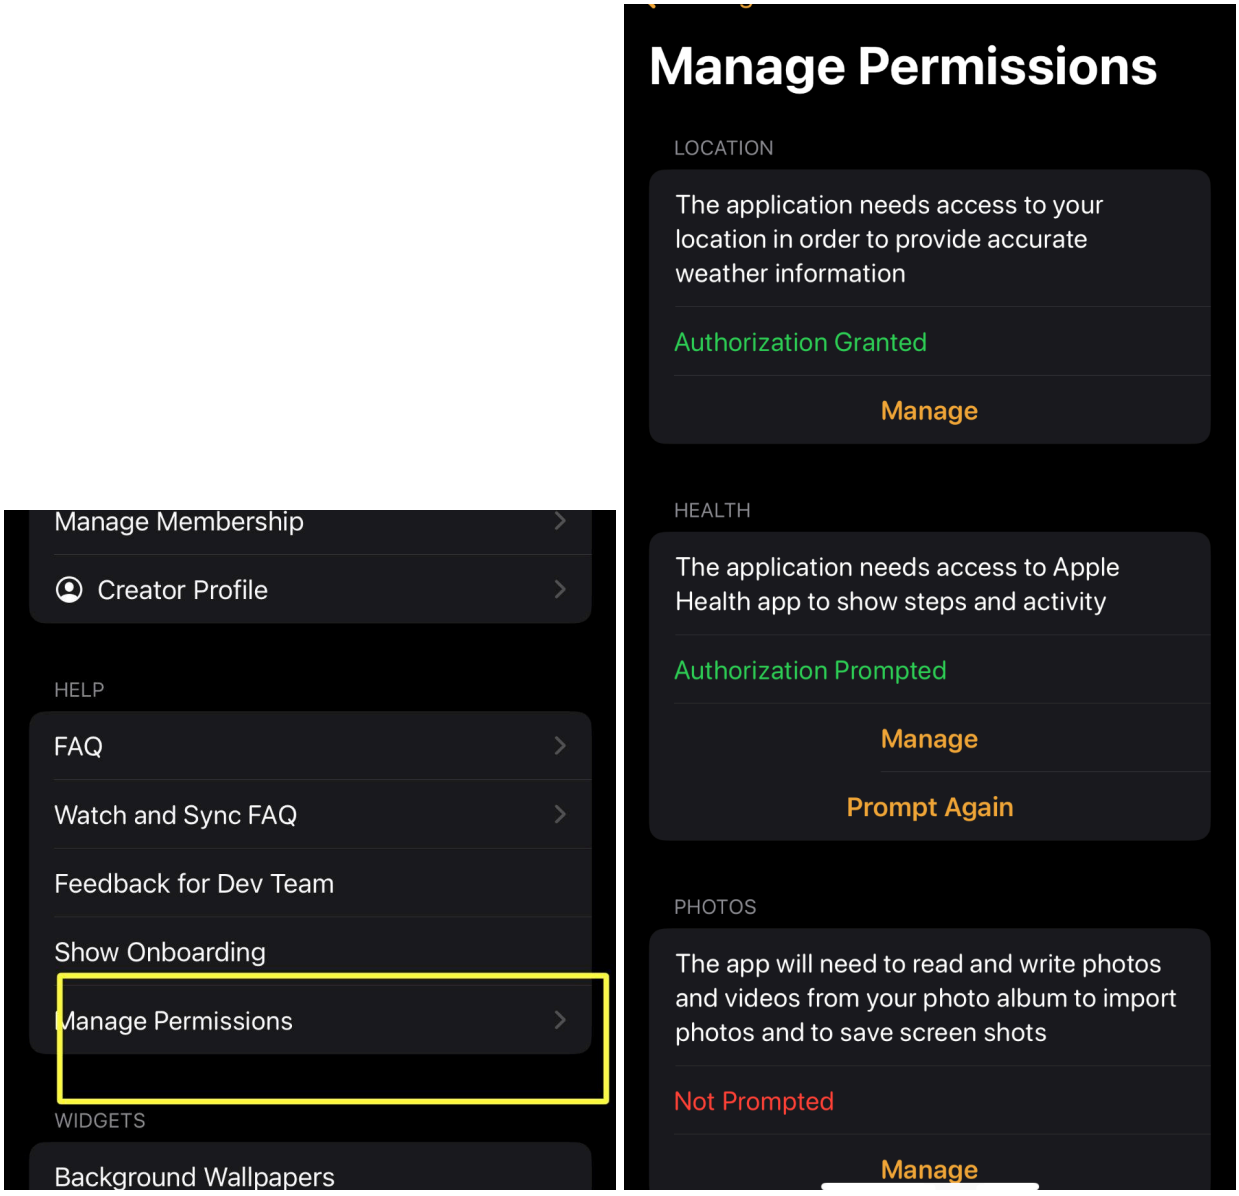

With Clockology+ you can tag your creations. This information will be added to any clocks you create and will display on the main app page: (profile icon) If you do not have a subscription profile data will display as anonymous.

These profile links will be tappable:

Manage Permissions: (Prompt to grant permissions)

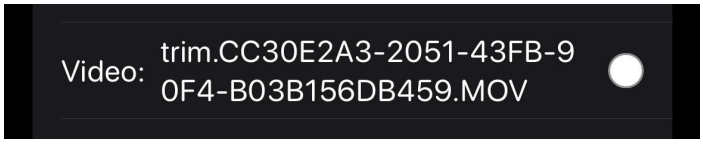

Permissions can only be prompted once or twice. To manually grant permissions you need to go to your phone settings, privacy & security and health (for health data) or location services (for weather data).

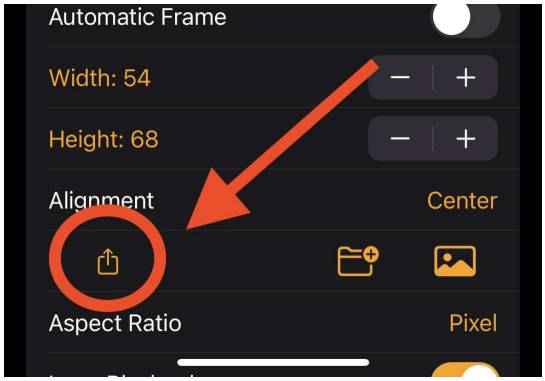

Mute Embedded Videos

To permanently mute a video playing audio in a full screen face follow these 7 steps:
(See steps below)

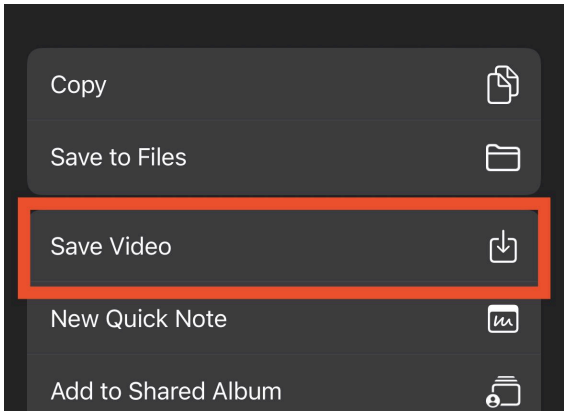

1. Select video layer in studio

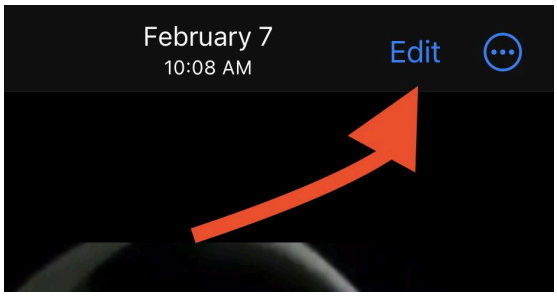

2. Export video

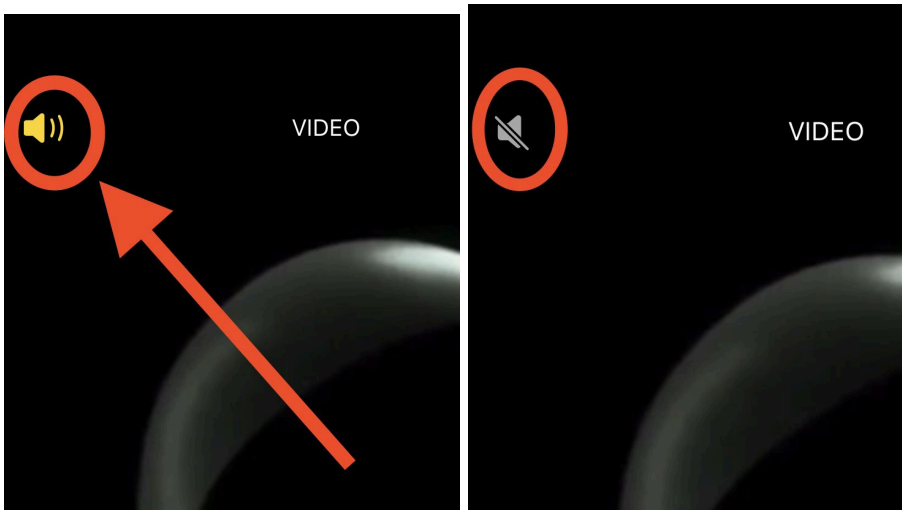

3. Save video

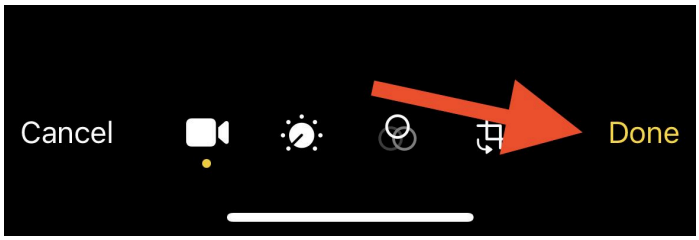

4. Edit video

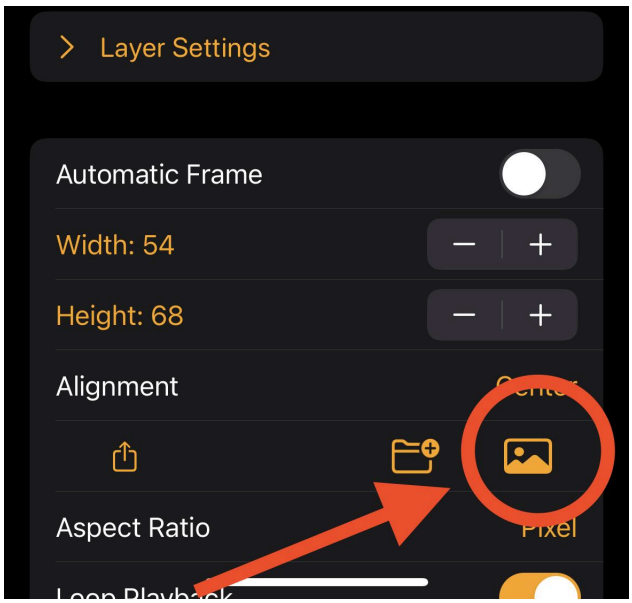

5. Tap speaker icon to mute

6. Tap done

7. Reimport muted video

How do I access notifications/control center from within a full screen face?

To access your Notification Center while using an app, do the following:

1) Wake your Apple Watch display.
2) Tap and hold the **top edge of the display**.
3) As the handle appears under your finger near the top edge of the display, just **swipe down** to show the Notification Center panel and see your recent alerts.

This gesture doesn't work on the Home screen and in the Dock.

How to access Control Center from apps

To open Control Center while using an app, do the following:

1) Wake your Apple Watch display.
2) Tap and hold the **bottom edge of the display**.
3) When the handle appears under your finger near the bottom edge of the display, simply **pull up** to drag the Control Center overlay into full view.

Sending to Apple Watch failed?

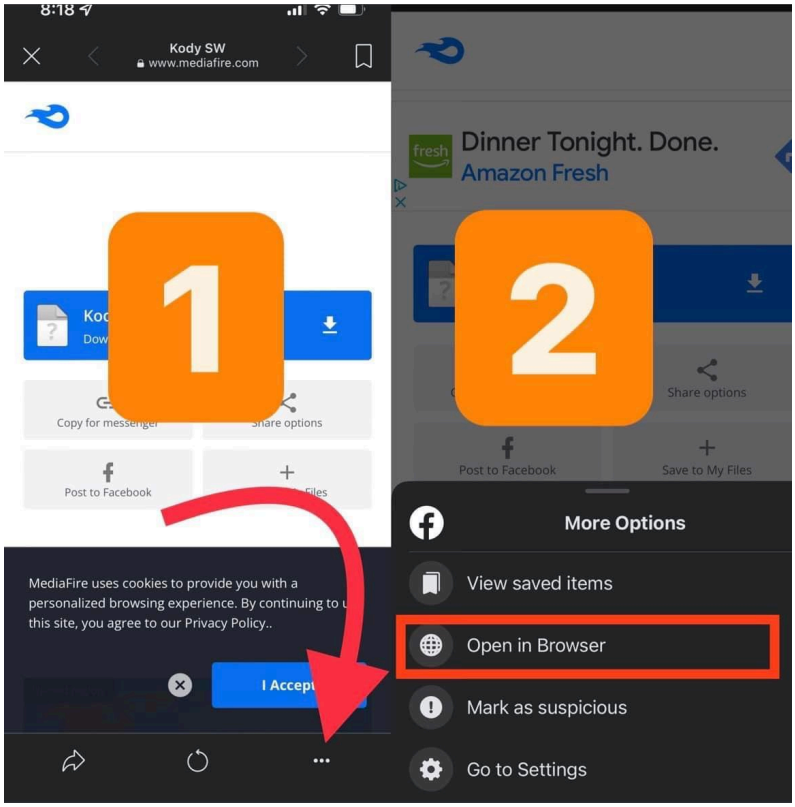

Install Clockology to watch, open Clockology to sync.

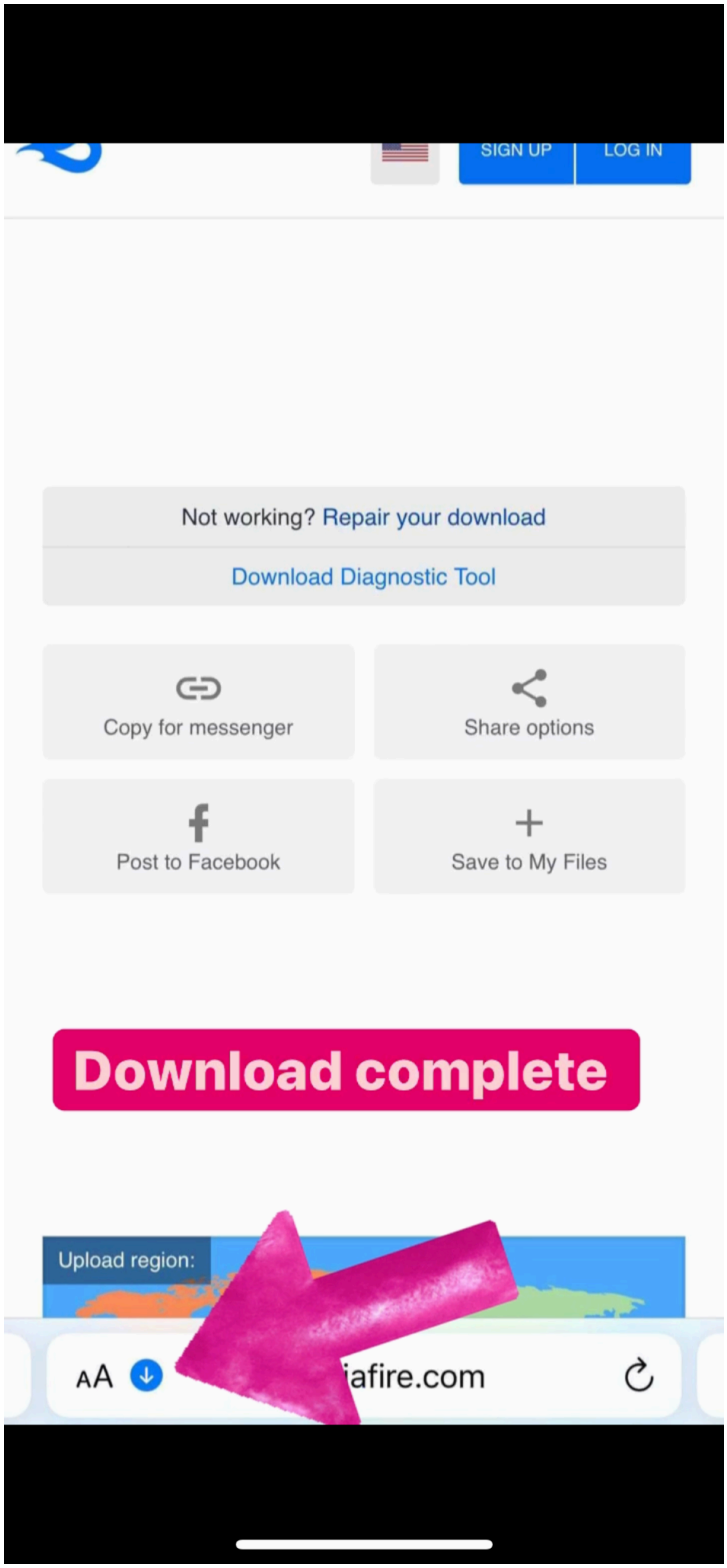

Still not working? Reboot and try again.

Internet error? Can't download?

Tap the 3 dots then open in browser. Use safari for best results. After you open in browser you'll be presented with a download dialog. Once you press download you'll see a screen that says "Not working? Repair your download" This is the default screen that appears after a successful download! Check the blue arrow for your download.

No Internet Connection
Try these steps to get back online:
Check your modem and router
Reconnect to Wi-Fi

Ultra Action Button

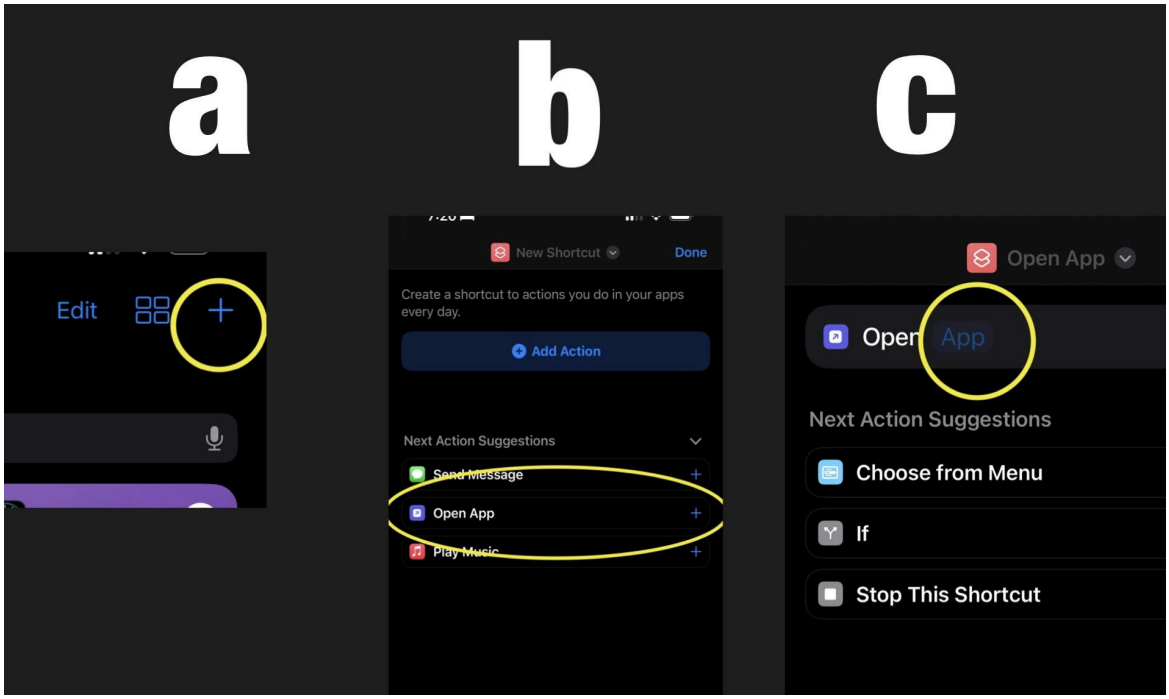

You can assign the action button on the ultra to run clockology using shortcuts:

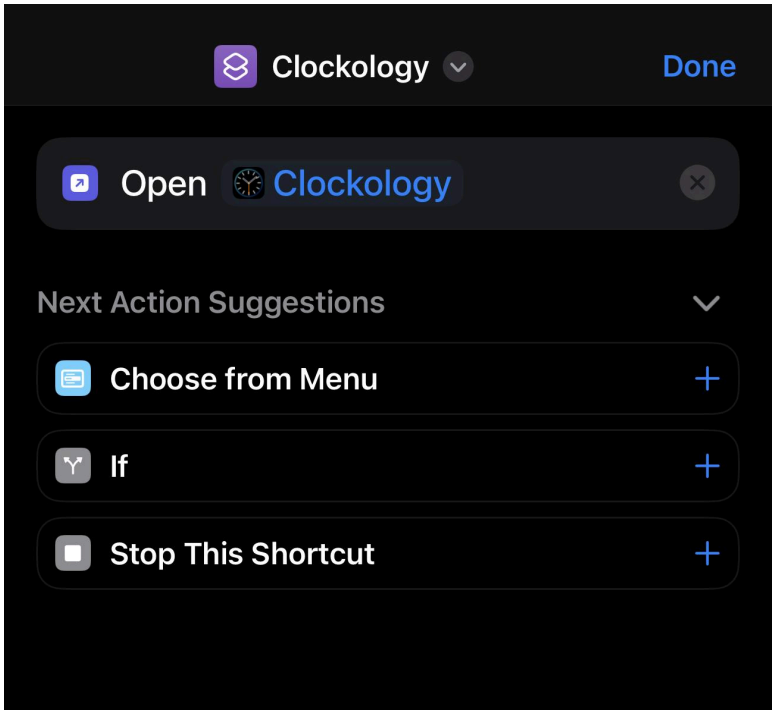

1. Open shortcuts app.
2. Create new shortcut to open Clockology. Make sure you're in the Apple Watch folder. Select < Shortcuts then Apple Watch. You should see Apple Watch at the top.

   a. Select plus to create new shortcut
   b. Select open app action
   c. Select Clockology
3. Open watch app. Go to action button. Select shortcut as action and select the Clockology shortcut you created.

Use the shortcuts app to create a shortcut to open clockology.

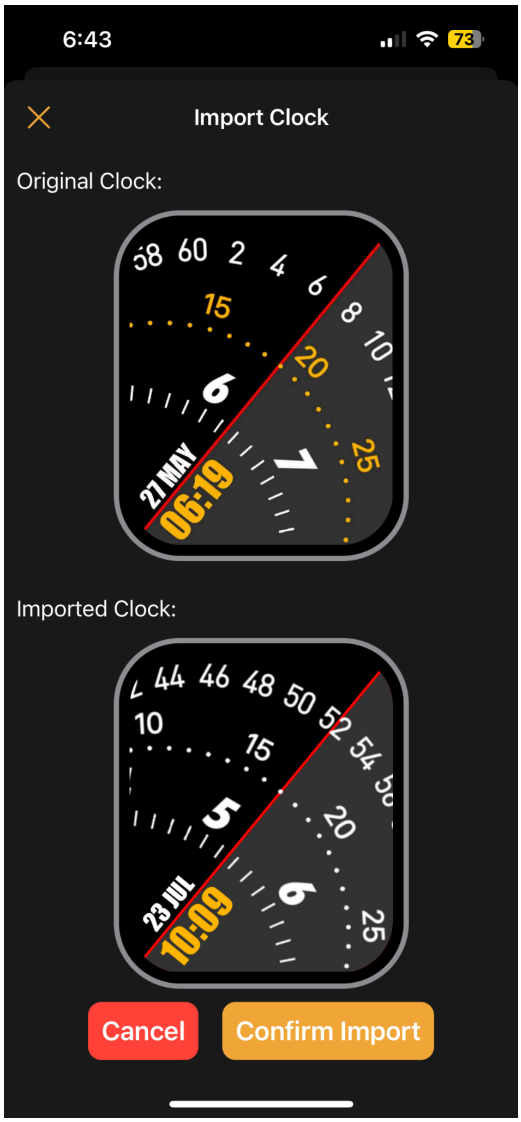

Assign the action button setting to run the shortcut.

Series 3

Support for Series 3 has ended. We extended s3 life for over an additional year. It was removed previously but we hacked it together to stretch longer. Unfortunately Apple doesn't allow a way

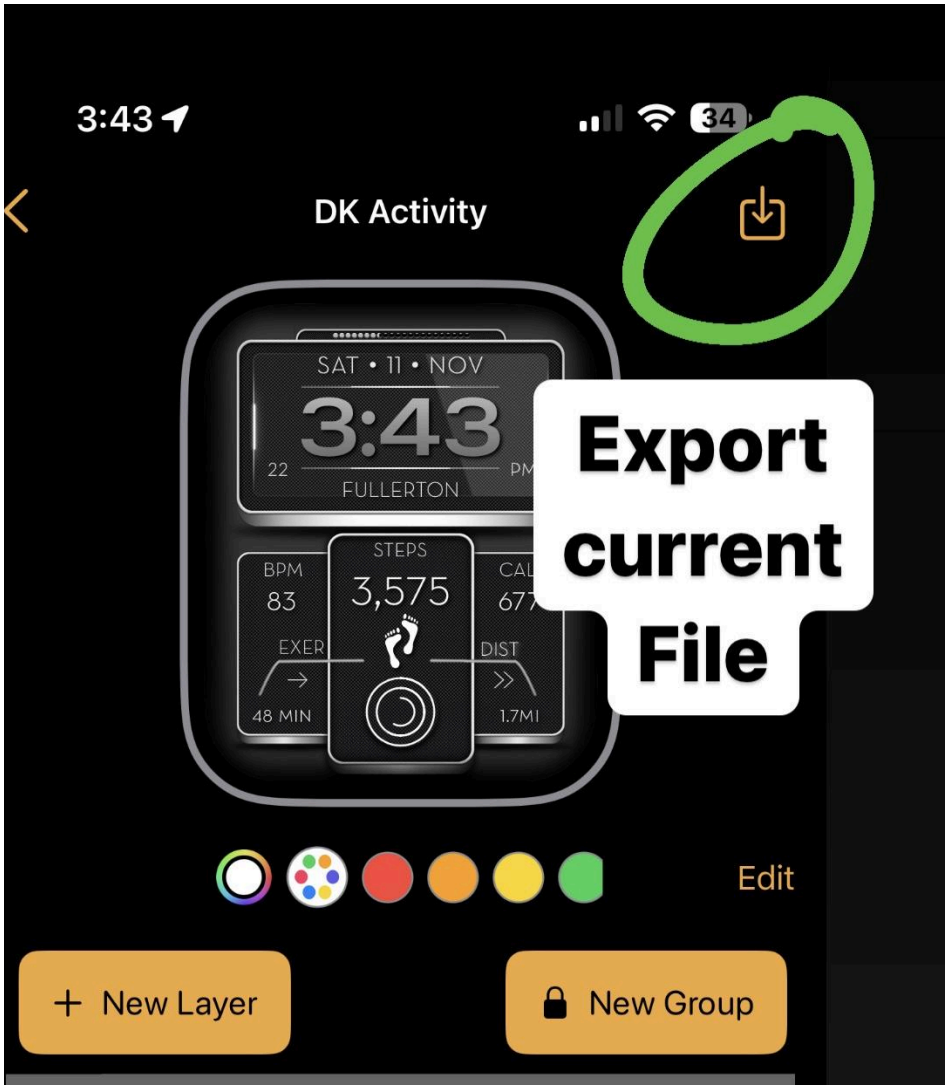

to separate iOS/watchos install requirements. So we'd either have to continue to support series 3 or provide support for the new watchOS 11.

Importing old .clock files:

Old format .clock files will be converted to .clock2 using this import process. The top image is a screenshot from the original clock file. The bottom image is what the import will look like.

(This is not a selection screen) This screen will only appear for **old** format .clock files, not new/current .clock2 files.

Export this imported file or make at ***least one adjustment*** (ie: hide/unhide one layer) in order to be presented with the option to sync in quick look. Press back after making edits. ***Clock files must be imported to clock2 for use with the new app.***

Old Clocks imported previously to Clockology are in the Clockology folder. It'll be either "On my iPhone" or in your "iCloud Drive" depending on how you had your application set up.
